*LAURUS.* red by degrees to the open air. Weeding and watering must be observed during the summer; and at the approach of the cold weather in the autumn, they should be removed under an hot-bed frame, or some cover, to be protected from the frosts during the winter. In the spring, when this danger is over, they should resume their first station; namely, the pots should be plunged up to the rim, as when the seeds were first sown; and if this place be well sheltered, they may remain there all winter; if not, and severe frosts threaten, they should be taken up and placed under cover as before. After they have been thus managed three years from the seeds, they should be taken out of the pots with care, and planted in the nursery-ground at small distances, where they may remain until they are strong enough to be finally set out. By sowing the seeds in pots, and assisting them by an hot-bed, a year at least is saved; for they hardly ever come up, when sown in a natural border, under two years from the seeds; nay, they have been known to remain three, and even some plants to come up the fourth year after sowing; which at once shows the preference of the former practice, and should caution all who have not such convenience, not to be too hasty in disturbing the beds when the seeds are sown in the natural ground; as, especially if they are not well preserved in mould or sand, these may be some years before they appear. Indeed, it is the long time we are in obtaining these plants, either by seeds, layers, &c. that makes them at present so very scarce amongst us.

2. These plants may also be increased by layers; but very slowly; for they will be two, and sometimes three, or even four years, before they have struck out good roots; though the Benjamin tree is propagated the fastest by this method. The young twigs should be laid in the ground in the autumn; and it will be found that twirling the wire round the bud, so as in some degree to stop the progress of the sap, and taking away with a knife a little of the bark, is a more effectual method of obtaining good roots soon than by the slit or twirling, especially when practised on the sassafras tree.

3. Plants of these sorts are likewise sometimes obtained by suckers, which they will at all times throw out, and which may be often taken off with pretty good roots; but when they are weak, and with bad roots, they should be planted in pots, and assisted by a moderate heat in a bed: With such management they will be good plants by the autumn, and in the spring may be planted out any where.

4. Cuttings of these trees, when planted in a good bark-bed, and duly watered, will also oftentimes grow. When this method is practised, and plants obtained, they must be inured by degrees to the open air, till they are hardy enough to be finally planted out.

The Indian bay, the camphor, the avocado, and the cinnamon-tree, require the treatment common to green-house plants; the latter, however, is rather a stove plant in this country.—Of its culture or propagation in its native places, no particular account has been given by botanical writers; but it must now become an important consideration with us, since this valuable tree has been acquired by our own colonies. Of the advantages promised by this acquisition we are indebted for the first accounts to Dr Wright in 1787; from whom also we learn that its propagation is very

easy, and its culture requires little care, as more particularly noticed below. Since that time, some observations by Dr Dancer, relative to its cultivation, have appeared in the Transactions \* of the Society of Arts, &c. These observations confirm, without adding any thing essential to the concise notice of Dr Wright. We are informed, that as the tree “ puts out numerous side-branches, with a dense foliage, from the very bottom of the trunk; this furnishes an opportunity of obtaining plenty of layers, and facilitates the propagation of the tree, as it does not perfect its seeds in any quantity under six or seven years; when it becomes so plentifully loaded, that a single tree is sufficient almost for a colony. It seems to delight in a loose moist soil, and to require a southern aspect; the trees, thus planted, flourishing better than others growing in loam, and not so well exposed to the sun. When healthy, it is (from layers) of a pretty quick growth, reaching in eight years the height of fifteen or twenty feet, is very spreading, and furnished with numerous branches of a fit size for decoration. The seeds, however, are a long time in coming up, and the plants make small progress for the first year or two.” It is added, that “ the birds appear to be very fond of the berries, and will probably propagate this tree in the same way they do many others every where over the island; so that in a short time it will grow spontaneously, or without cultivation.” The age for decortication, said above to be eight years, it will be observed, is different from that specified below for the trees in Ceylon.

*Uses.* Evelyn says, he has seen bay trees near 30 feet high, and almost two feet in diameter; and enumerates the bay amongst useful trees. Hambury catches at this idea, and tells us in general terms, that “ it will grow to 30 feet in height, with a trunk of two feet in diameter:” and accordingly he arranges it among his forest trees: he acknowledges, however, at the same time, that the wood is of little value. The bay is nevertheless a fine aromatic and a beautiful evergreen: It is laid to be the true *Laurus* or laurel of the ancients, with which they adorned the brows of their successful generals. Like the holly, box, and laurel, the bay will bear the shade and drip of taller trees; and it is upon the whole a very desirable, as being a very ornamental, evergreen.

The leaves and berries of this tree have a moderately strong aromatic smell, and a warm, bitterish, pungent taste: the berries are stronger in both respects than the leaves, and afford in distillation a larger quantity of essential aromatic oil; they yield also an almost insipid oil to the press, in consequence of which they prove unctuous in the mouth. They are warm carminatives, and sometimes exhibited in this intention against flatulent colics, and likewise in hysterical disorders. Their principal use in the present practice is in glysters, and some external applications. The deciduous bay, in a moist rich soil, in which it principally delights, will grow to be about 16 feet high; but in some soils, that are possessed of the opposite qualities, it will hardly arrive at half that height. The flowers are succeeded in May by large red berries, which never ripen in England: so that, notwithstanding the leaves in summer are very pretty, and the colour of the bark makes a variety in winter, it is principally

cipally the scarcity of this plant which makes it valuable.

The *benzoin* tree will grow to a much larger size than the other, and its branches are more numerous. They are smooth, and of a fine light-green colour. The leaves on their upper surface are smooth and of a fine light-green colour, but their under surface is venose, and of a whitish cast. When bruised, they emit a fine fragrance. This tree was formerly mistaken for that which produces the drug called *benzoin*; which is now known to be obtained from a species of *Syrax*. See *SYRAX*.

The *sassafras* will grow to nearly the height of the others, though the branches are not so numerous. Its bark is smooth, and of a red colour, which beautifully distinguishes it in winter; whilst the fine shining green of its leaves constitutes its greatest beauty in summer. In these, indeed, there is a variety, and a very extraordinary one. Some are large, and of an oval figure; others are smaller, and of the same shape; whilst others again are so divided into three lobes, as to resemble the leaves of some sorts of the fig-tree. In America, the *sassafras* generally stands single in the woods, and along the fences round the fields. It flowers in May before the leaves come out; and being entirely covered with them, it is distinguished at a great distance by their beautiful yellow colour.

The root of the *sassafras* has a fragrant smell, and a sweetish, aromatic, subacid taste; the bark tastes much stronger than any other part, and the small twigs stronger than the large pieces. It is a warm aperient and corroborant, and frequently employed with good success for purifying and sweetening the blood and juices. For these purposes, infusions made from the rasped root or bark may be drank as tea. In some constitutions indeed, such liquors are, by their fragrance, apt, on first taking them, to affect the head; but in such cases they may be advantageously freed from their flavour by boiling. A decoction of *sassafras*, boiled down to the consistence of an extract, proves simply bitterish and subastrigent. Hoffmann assures us, that he has frequently given this extract to the quantity of a scruple at a time, with remarkable success, for strengthening the tone of the viscera in cachexies; as also in the decline of intermittent fevers, and in hypochondriacal spasms. *Sassafras* yields in distillation an extremely fragrant oil of a penetrating pungent taste, so ponderous (notwithstanding the lightness of the drug itself) as to sink in water. Rectified spirit extracts the whole taste and smell of *sassafras*; and elevates nothing in evaporation: hence the spirituous extract proves the most elegant and efficacious preparation, as containing the virtue of the root entire.

The bark of this tree is used by the women in Pennsylvania and other parts of North America in dying worsted a fine lasting orange-colour, which does not fade in the sun. They use urine instead of alum in dying; and boil the dye in a brass boiler, because in an iron vessel it does not yield so fine a colour. The wood is made use of for posts belonging to the inclosures, for it is said to last a long time in the ground: but it is likewise said, that there is hardly any kind of wood which is more attacked by worms than this when it is exposed to the air without cover; and that in a short time it is quite worm-eaten through and through.

On cutting some part of the *sassafras* tree, or its shoots, and holding it to the nose, it has a strong but pleasant smell. Some people peel the root, and boil the peel with the beer which they are brewing, because they believe it wholesome. For the same reason, the peel is put into brandy either whilst it is distilling or after it is made. Professor Kalm informs us, that a decoction of the root of *sassafras* in water, drank every morning, is used with success in the drop-sy. When part of a wood is destined for cultivation, the *sassafras* trees are commonly left upon it, because they have a very thick foliage, and afford a cool shade to the cattle during the great heats. Some people get their bed-posts made of *sassafras* wood, in order to expel the bugs; for its strong scent, it is said, prevents those vermin from settling in them. For two or three years together this has the desired effect, or about as long as the wood keeps its strong aromatic smell; but after that time it has been observed to lose its effect. In Pennsylvania some people put chips of *sassafras* into their chests, where they keep all sorts of woollen stuffs, in order to expel the moths (or larvae or caterpillars of moths or tinies) which commonly settle in them in summer. The root keeps its smell for a long while: Professor Kalm saw one which had lain five or six years in the drawer of a table, and still preserved the strength of its scent. The people also gather its flowers, and use it as tea.

The *persea*, or *alligator pear* tree, is cultivated universally in the West Indies by all ranks of people. The fruit is pear-shaped, and from one to two pounds in weight. On removing a green skin or covering, we come to a yellow butyraceous substance; and in the heart find a large round seed or stone, which is unequal in the surface, and exceedingly hard and woody. This fruit is ripe in August and September, and constitutes one of the most agreeable articles of diet for six or eight weeks to the negroes. These pears, with a little salt and a plantain or two, afford a hearty meal. They are also served up at the tables of white people as choice fruit. When the pear is ripe, the yellow or eatable substance is firmer than butter, and tastes somewhat like butter or marrow: hence it is called by some the *vegetable marrow*. But however excellent this fruit is when ripe, it is very dangerous when pulled and eaten before maturity. Dr Wright says, he has repeatedly known it to produce fever and dysentery, which were removed with difficulty.—The leaves of this tree and those of the bead-vine or wild liquorice are made into pectoral decoctions by the common people.—The large stone is used for marking linen. The cloth is tied or held over the stone, and the letters are pricked out by a needle through the cloth and into the seed. The stain is a reddish brown, which never washes out.—The buds of the alligator tree are said to be used with success in ptisans against the venereal disease. An infusion of them in water, drank in the morning fasting, is strongly recommended for dislodging coagulated blood in the stomach produced by a fall or a severe stroke on that important entrail. “The wild bears in the East Indies (says Labat) eat greedily of the mamees and avocado pears, which give their flesh a luscious and most agreeable flavour”

*Cassia*. The bark of this species is known in the shops by the name of *cassia lignea*. This bark, which

*Laurus.* is imported from different parts of the East Indies and from China, has a very near resemblance to the cinnamon; though distinguishable from it by being of a thicker and coarser appearance, and by its breaking short and smooth, while the cinnamon breaks fibrous and shivery.—It resembles cinnamon still more exactly in its aromatic flavour than in its external appearance; and seems only to differ from it in being somewhat weaker, in abounding more with a viscous mucilaginous matter, and in being less astringent. Accordingly, it has not only a place in the Edinburgh pharmacopœia, but is also the basis of a distilled water. It is perhaps surprising that the London college have given it no place in their lists. But although it does not enter their pharmacopœia, yet we may venture to assert, that it will not be neglected by the apothecaries. At present it is very common with many of them to substitute the cassia in every case for the more expensive article cinnamon: and indeed almost the whole of what is at present sold under the title either of simple or spirituous cinnamon-water is entirely prepared from cassia; and not even entirely from the bark, but from a mixture of the bark and buds.

*Cinnamon* is the under-bark of the *cinnamomum*. The best season for separating it from the outer-bark, which is grey and rugged, is the spring, when the sap flows in the greatest abundance. It is cut into thin slices, and exposed to the sun, and curls up in drying.—The old trees produce a coarser kind of cinnamon; the spice is in perfection only when the trees are not older than three or four years. When the trunk has been stripped of its bark, it receives no further nourishment; but the root is still alive, and continues to throw out fresh shoots. The fruit of the tree is shaped like an acorn, but is not so large. Its seed, when boiled in water, yields an oil which swims at top, and takes fire. If left to cool, it hardens into a white substance, of which candles are made, which have an agreeable smell, and are reserved for the use of the king of Ceylon. The cinnamon is not reckoned excellent unless it be fine, smooth, brittle, thin, of a yellow colour inclining to red; fragrant, aromatic, and of a poignant, yet agreeable taste. The connoisseurs give the preference to that the pieces of which are long, but slender. That which comes to us is generally mixed with the Cassia bark; but this last is easily distinguished. Cinnamon splinters in breaking, and has a roughness along with its aromatic flavour; while the Cassia breaks over smooth, and has a mucilaginous taste. Cinnamon is a very elegant and useful aromatic, more grateful both to the palate and stomach than most other substances of this class. By its astringent quality it likewise corroborates the viscera, and proves of great service in several kinds of alvine fluxes, and immoderate discharges from the uterus.

The cinnamon plant, with other valuable ones, was taken in a French ship by Admiral Rodney in the last war, and presented by him to the assembly of Jamaica. One of the trees was planted in the botanic garden in St Thomas in the East; the other by Hinton East, Esq; in his noble garden at the foot of the Blue Mountains. From these parent trees some hundreds of young trees are already produced from layers and cuttings, and dispersed to different parts of the country, in all which it thrives luxuriantly with little trouble: we

may therefore hope it will soon be a valuable addition to our commerce. Upon comparing the parts of the tree with the description and figure given by Burman and other botanists, it appears to be the real Ceylon cinnamon, and of the best kind, called by the natives *Raffi Coronde*: but the specimens of bark taken put it out of all doubt, being, in the opinion of the best judges, of an equal, if not superior, quality to any imported from India. The smallest bit of the bark, Dr Wright assures us, is quite a cordial. The cinnamon we have from Holland, he observes, is often inert, and gives room to suspect that it has been subjected to a slight process in distillation.

In regard to the trees growing in Jamaica, Dr Dancer informs us in his paper already quoted, that “The best cinnamon bark, according to the different trials I have made, is taken from the small branches, of about an inch diameter, the larger limbs not being so easily decorticated, and not yielding so good or so strong a cinnamon. The smaller twigs, or those that have not acquired a cineritious bark, are too full of sap and mucilage, and have little *aroma*. It is the *liber*, or inner bark, that constitutes the cinnamon; from which the two external barks must be carefully and entirely separated, or they vitiate the flavour of the cinnamon; to do which with dexterity, and to raise the bark from the wood, requires some practice. The bark being separated, the smaller pieces are to be placed within the larger; which, by exposure to the sun or the air, presently coil up, and require no further preparation. A dry season is the proper one for taking the bark; as it is found to be weakened after long or heavy rains. Cinnamon, though more retentive of its virtues than any of the other spices, yet requires to be protected, when taken from the air and moisture, by close packing in cedar chests.—The leaves of this tree, whether recent or dried, are so strongly impregnated with an *aroma*, as to afford a good succedaneum for the bark both in cookery and medicine. Distilled, they give an excellent simple and spirituous water, and an essential oil. Powdered, they are a good aromatic species, or marshal perfume.”

*Camphor*, though solid, is the essential oil of the *laurus camphora*; and is obtained from it by distillation in the East Indies. (See the article CAMPHORA).—This tree is another of the captured plants given to the inhabitants of Jamaica; and, if cultivated with care, will also be an useful acquisition.

The Abbe Grosier informs us, that in China some of these trees are found above 100 cubits in height, and so thick that 20 persons cannot enclose them. The tree is there called *tebang*; and it is said that the trunk, when old, emits sparks of fire, but of so subtle a nature as not even to injure the hair of those who are near it. Common camphire costs only a penny the ounce at Pe-king; but it is inferior to that of Borneo, in the judgment even of the Chinese.

The manner in which some authors have spoken of Camphire (the Abbe observes), gives us reason to conclude that they have been entirely ignorant of the process employed to obtain this salutary gum. The camphire does not drop to the earth, like the gums of certain resinous trees, which are preserved by discharging that part of their substance which is too oily; neither does it distil from the top to the bottom of the

Lacrus,  
Laus.

tree through an incision made in it. The Chinese would practise this method could it be employed with success; for it is very common in China to make such kind of incisions in resinous trees. The method used by the Chinese for obtaining camphire is as follows.—They take some branches fresh from the *tebang*, chop them very small, and lay them to steep in spring-water for three days and three nights. After they have been soaked in this manner, they are put into a kettle, where they are boiled for a certain time, during which they keep continually stirring them with a stick made of willow. When they perceive that the sap of these small chips adheres sufficiently to the stick in the form of white froth, they strain the whole, taking care to throw away the dregs and refuse. This juice is afterwards poured gently into a new earthen basin well varnished, in which it is suffered to remain one night. Next morning it is found coagulated, and formed into a solid mass. To purify this first preparation, they procure some earth from an old earthen wall, which, when pounded and reduced to a very fine powder, they put into the bottom of a basin made of red copper; over this layer of earth they spread a layer of camphire, and continue thus until they have laid four strata. The last, which is of very fine earth, they cover up with the leaves of the plant *po-lo*, or pennyroyal; and over the whole they place another basin, joining it very closely to the former by means of a kind of red earth that cements their brims together. The basin thus prepared is put over a fire, which must be managed so as to keep up an equal heat: experience teaches them to observe the proper degree. But above all, they must be very attentive lest the plaster of fat earth which keeps the basins together should crack or fall off; otherwise the spirituous parts would evaporate and ruin the whole process. When the basins have been exposed to the necessary heat, they are taken off and left to cool; after which they are separated, and the sublimated camphire is found adhering to the cover. If this operation be repeated two or three times, the camphire is found purer and in larger pieces. Whenever it is necessary to use any quantity of this substance, it is put between two earthen vessels, the edges of which are surrounded with several bands of wet paper. These vessels are kept for about an hour over an equal and moderate fire; and when they are cool, the camphire is found in its utmost perfection and ready for use. This method of procuring camphire, even from the heart of the tree, may be practised in all seasons of the year; which would not be the case (our author observes), were it extracted like other resinous substances that only flow during a certain short space of time. Besides, by lopping the branches of the camphire-tree, less hurt is done to it than by making incisions, which are always hazardous.

LAUS, or LAOS (anc. geog.), a river of Italy, separating Lucania from the Bruttii, and running from east to west into the Tuscan sea; with a cognominal bay, and a town, the last of Lucania, a little above the sea; a colony from Sybaris, according to Strabo, Pliny, Stephanus. Both town and river are now called *Laino*, in the Calabria Citra; and the bay, called *Golfo della Scalea*, or *di Policastro*, two adjoining towns, is a part of the Tuscan sea, extending between the promontory Palinurus and the mouth of the Laus.

Laas,  
Lavori.

*Laus Pompeia* (anc. geog.), a town of Infubria, situated to the east of Milan, between the rivers Addua and Lamber. A town built by the Boii after their passing the Alps: its ancient Gaulic name is unknown. Strabo Pompeius, father of Pompey, leading thither a colony, gave it a new name, and conferred the *Jus Latii* on the ancient inhabitants who remained there. The modern Lodi is built from its ruins, at some distance off. E. Long. 10. 15. N. Lat. 45. 22.

LAUSANNE, a large, ancient, and handsome town of Switzerland, capital of the country of Vaud, and in the canton of Berne, with a famous college and bishop's see. The town-house and the other public buildings are magnificent. It is seated between three hills near the lake of Geneva, in E. Long. 6. 35. N. Lat. 46. 30.—The town stands on an ascent so steep, that in some places the horses cannot draw up a carriage without great difficulty, and foot-passengers ascend to the upper part of the town by steps. Here is an academy for the students of the country; the professors are appointed by government; and there is a pretty good public library. The church, formerly the cathedral, is a magnificent Gothic building, standing on the most elevated part of the town. Among other sepulchres it contains that of Amadeus VIII. duke of Savoy, styled the *Solomon* of his age; best known by the title of *Antipope Felix V.* who exhibited the singular example of a man twice abdicating the sovereignty, and retiring from regal pomp to a private station.

The same year that the country named *Pays de Vaud* was conquered from the house of Savoy, the inhabitants of Lausanne put themselves under the protection of the Canton of Berne, their bishop having retired from the town. At that time its privileges were confirmed and augmented, and it is still governed by its own magistrates. The citizens of the principal street have the privilege of pronouncing sentence in criminal cases. If the criminal is found, and acknowledges himself guilty, the burghers of the street assemble: one of the magistrates pleads in his behalf, and another against him; the court of justice give their opinion upon the point of law; and the majority of citizens possessing houses in the principal street, determine the penalty. In capital cases there is no pardon, according to the letter of the law, unless it can be obtained within 24 hours from the sovereign council of Berne, though it generally happens that eight days are allowed for this purpose. When the criminal is seized within the jurisdiction of the town, the fact is tried, and the burghers pronounce sentence, from which there is no appeal; but if he happens to be taken in the district of the bailiff, there is an appeal to the government of Berne.

LAVORI (TERRA DI), a province of Italy, in the kingdom of Naples, bounded on the west by the Campagna of Rome, and by Farther Abruzzo; on the north by the Citerior Abruzzo, and by the county of Molissa; on the east by the Ultra Principata; and on the south by the Principata Citra. It is about 63 miles in length and 35 in breadth; and is fertile in corn, excellent vines, and other fruits. There are also several mineral springs and mines of sulphur; Naples is the capital town.

## L A W.

## PART I. OF THE NATURE OF LAWS IN GENERAL.

**L**AW, in its most general and comprehensive sense, signifies a rule of action; and is applied indiscriminately to all kinds of action, whether animate or inanimate, rational or irrational. Thus we say, the laws of motion, of gravitation, of optics, of mechanics, as well as the laws of nature and of nations. And it is that rule of action which is prescribed by some superior, and which the inferior is bound to obey.

Thus when the Supreme Being formed the universe, and created matter out of nothing, he impressed certain principles upon that matter, from which it can never depart, and without which it would cease to be. When he put that matter into motion, he established certain laws of motion, to which all moveable bodies must conform. And, to descend from the greatest operations to the smallest, when a workman forms a clock, or other piece of mechanism, he establishes at his own pleasure certain arbitrary laws for its direction; as, that the hand shall describe a given space in a given time; to which law as long as the work conforms, so long it continues in perfection, and answers the end of its formation.

If we farther advance, from mere inactive matter to vegetable and animal life, we shall find them still governed by laws; more numerous indeed, but equally fixed and invariable. The whole progress of plants, from the seed to the root, and from thence to the seed again; the method of animal nutrition, digestion, secretion, and all other branches of vital economy;—are not left to chance, or the will of the creature itself, but are performed in a wondrous involuntary manner, and guided by unerring rules laid down by the great Creator.

This then is the general signification of law, a rule of action dictated by some superior being: and, in those creatures that have neither the power to think nor to will, such laws must be invariably obeyed, so long as the creature itself subsists; for its existence depends on that obedience. But laws, in their more confined sense, and in which it is our present business to consider them, denote the rules, not of action in general, but of *human* action or conduct: that is, the precepts by which man, the noblest of all sublunary beings, a creature endowed with both reason and free-will, is commanded to make use of those faculties in the general regulation of his behaviour.

Man, considered as a creature, must necessarily be subject to the laws of his Creator, for he is entirely a dependent being. A being, independent of any other, has no rule to pursue but such as he prescribes to himself; but a state of dependance will inevitably oblige the inferior to take the will of him on whom he depends as the rule of his conduct; not indeed in every particular, but in all those points wherein his dependance consists. This principle therefore has more or less extent and effect, in proportion as the superiority of the one and the dependance of the other is greater or less, absolute or limited. And consequently, as man

depends absolutely upon his Maker for every thing, it is necessary that he should in all points conform to his Maker's will. Of Laws in general.

This will of his Maker is called the *law of nature*. For as God, when he created matter, and endued it with a principle of mobility, established certain rules for the perpetual direction of that motion; so, when he created man, and endued him with free-will to conduct himself in all parts of life, he laid down certain immutable laws of human nature, whereby that free-will is in some degree regulated and restrained, and gave him also the faculty of reason to discover the purport of these laws. Law of nature.

Considering the Creator only as a being of infinite power, he was able unquestionably to have prescribed whatever laws he pleased to his creature man, however unjust or severe. But as he is also a Being of infinite wisdom, he has laid down only such laws as were founded in those relations of justice that existed in the nature of things antecedent to any positive precept. These are the eternal immutable laws of good and evil, to which the Creator himself in all his dispensations conforms; and which he has enabled human reason to discover, so far as they are necessary for the conduct of human actions. Such, among others, are these principles: That we should live honestly, should hurt nobody, and should render to every one his due; to which three general precepts Justinian has reduced the whole doctrine of law.

But if the discovery of these first principles of the law of nature depended only upon the due exertion of right reason, and could not otherwise be obtained than by a chain of metaphysical disquisitions, mankind would have wanted some inducement to have quickened their inquiries, and the greater part of the world would have relapsed content in mental indolence, and ignorance its inseparable companion. As therefore the Creator is a being, not only of infinite power and wisdom, but also of infinite goodness, he has been pleased so to contrive the constitution and frame of humanity, that we should want no other prompter to inquire after and pursue the rule of right, but only our own self-love, that universal principle of action. For he has so intimately connected, so inseparably interwoven, the laws of eternal justice with the happiness of each individual, that the latter cannot be attained but by observing the former; and if the former be punctually obeyed, it cannot but induce the latter. In consequence of which mutual connection of justice and human felicity, he has not perplexed the law of nature with a multitude of abstracted rules and precepts, referring merely to the fitness or unfitness of things, as some have vainly surmised; but has graciously reduced the rule of obedience to this one paternal precept, "that man should pursue his own happiness." This is the foundation of what we call *ethics*, or *natural law* \*. For the several \* See *Morality*. articles into which it is branched in our systems, amount to no more than demonstrating, that this or that

action

Of Laws  
in general.

action tends to man's real happiness; and therefore very justly concluding, that the performance of it is a part of the law of nature; or, on the other hand, that this or that action is destructive of man's real happiness, and therefore that the law of nature forbids it.

This law of nature, being coeval with mankind, and dictated by God himself, is of course superior in obligation to any other. It is binding over all the globe, in all countries, and at all times: no human laws are of any validity, if contrary to this; and such of them as are valid derive all their force, and all their authority, mediately or immediately, from this original.

But in order to apply this to the particular exigencies of each individual, it is still necessary to have recourse to reason: whose office it is to discover, as was before observed, what the law of nature directs in every circumstance of life; by considering, what method will tend the most effectually to our own substantial happiness. And if our reason were always, as in our first ancestor before his transgression, clear and perfect, untroubled by passions, unclouded by prejudice, unimpaired by disease or intemperance, the task would be pleasant and easy; we should need no other guide but this. But every man now finds the contrary in his own experience; that his reason is corrupt, and his understanding full of ignorance and error.

This has given manifold occasion for the benign interposition of Divine Providence; which, in compassion to the frailty, the imperfection, and the blindness of human reason, hath been pleased, at sundry times and in divers manners, to discover and enforce its laws by an immediate and direct revelation. The doctrines thus delivered, we call the *revealed* or *divine law*, and they are to be found only in the Holy Scriptures. These precepts, when revealed, are found upon comparison to be really a part of the original law of nature, as they tend in all their consequences to man's felicity. But we are not from thence to conclude, that the knowledge of these truths was attainable by reason in its present corrupted state; since we find, that, until they were revealed, they were hid from the wisdom of ages. As then the moral precepts of this law are indeed of the same original with those of the law of nature, so their intrinsic obligation is of equal strength and perpetuity. Yet undoubtedly the revealed law is of infinitely more authenticity than that moral system which is framed by ethical writers, and denominated the *natural law*: because one is the law of nature, expressly declared so to be by God himself; the other is only what, by the assistance of human reason, we imagine to be that law. If we could be as certain of the latter as we are of the former, both would have an equal authority: but till then they can never be put in any competition together.

Upon these two foundations, the law of nature and the law of revelation, depend all human laws; that is to say, no human laws should be suffered to contradict these. There are, it is true, a great number of indifferent points, in which both the divine law and the natural leave a man at his own liberty; but which are found necessary, for the benefit of society, to be restrained within certain limits. And herein it is that human laws have their greatest force and efficacy: for, with regard to such points as are not indifferent, human laws are only declaratory of, and act in subordination to,

the former. To instance in the case of murder: this is expressly forbidden by the divine, and demonstrably by the natural, law; and from these prohibitions arises the true unlawfulness of this crime. Those human laws that annex a punishment to it, do not at all increase its moral guilt, or superadd any fresh obligation in *foro conscientie* to abstain from its perpetration. Nay, if any human law should allow or enjoin us to commit it, we are bound to transgress that human law, or else we must offend both the natural and the divine. But with regard to matters that are in themselves indifferent, and are not commanded or forbidden by those superior laws; such, for instance, as exporting of wool into foreign countries; here the inferior legislature has scope and opportunity to interpose, and to make that action unlawful which before was not so.

If man were to live in a state of nature, unconnected with other individuals, there would be no occasion for any other laws than the law of nature and the law of God. Neither could any other law possibly exist: for a law always supposes some superior who is to make it; and in a state of nature we are all equal, without any other superior but him who is the Author of our being. But man was formed for society; and, as is demonstrated by the writers on this subject, is neither capable of living alone, nor indeed has the courage to do it. However, as it is impossible for the whole race of mankind to be united in one great society, they must necessarily divide into many; and form separate states, commonwealths, and nations, entirely independent of each other, and yet liable to a mutual intercourse. Hence arises a third kind of law to regulate this mutual intercourse, called the *law of nations*: which, as none of these states will acknowledge a superiority in the other, cannot be dictated by either; but depends entirely upon the rules of natural law, or upon mutual compacts, treaties, leagues, and agreements, between these several communities: in the construction also of which compacts we have no other rule to resort to but the law of nature; being the only one to which both communities are equally subject: and therefore the civil law very justly observes, that *quod naturalis ratio inter omnes homines constituit, vocatur jus gentium*.

To the consideration, then, of the law of nature, the revealed law, and the law of nations, succeeds the law of the municipal or civil law; that is, the rule by which particular districts, communities, or nations, are governed; being thus defined by Justinian, "*ius civile est quod quisque sibi populus constituit*." We call it *municipal law*, in compliance with common speech; for though, strictly, that expression denotes the particular customs of one single *municipium* or free town, yet it may with sufficient propriety be applied to any one state or nation which is governed by the same laws and customs.

Municipal law, thus understood, is properly defined to be "a rule of civil conduct prescribed by the supreme power in a state, commanding what is right, and prohibiting what is wrong." Let us endeavour to explain its several properties, as they arise out of this definition:

And, first, it is a *rule*: not a transient sudden order from a superior to or concerning a particular person; but something permanent, uniform, and universal. Therefore a particular act of the legislature to confis-

cate the goods of Titius, or to attain him of high treason, does not enter into the idea of a municipal law: for the operation of this act is spent upon Titius only, and has no relation to the community in general; it is rather a sentence than a law. But an act to declare that the crime of which Titius is accused shall be deemed high treason; this has permanency, uniformity, and universality, and therefore is properly a rule. It is also called a rule, to distinguish it from *advice* or *counsel*, which we are at liberty to follow or not as we see proper, and to judge upon the reasonableness or unreasonableness of the thing advised: whereas our obedience to the law depends not upon *our approbation*, but upon the *Maker's will*. Counsel is only matter of persuasion, law is matter of injunction; counsel acts only upon the willing, law upon the unwilling also.

It is also called a rule, to distinguish it from a *compact* or *agreement*; for a compact is a promise proceeding from us, law is a command directed to us. The language of a compact is, "I will, or will not, do this;" that of a law is, "Thou shalt, or shalt not, do this." It is true there is an obligation which a compact carries with it, equal in point of conscience to that of a law; but then the original of the obligation is different. In compacts, we ourselves determine and promise what shall be done, before we are obliged to do it; in laws, we are obliged to act without ourselves determining or promising any thing at all. Upon these accounts law is defined to be "a rule."

Municipal law is also "a rule of civil conduct." This distinguishes municipal law from the natural or revealed: the former of which is the rule of moral conduct; and the latter not only the rule of moral conduct, but also of faith. These regard man as a creature; and point out his duty to God, to himself, and to his neighbour, considered in the light of an individual. But municipal or civil law regards him also as a citizen, and bound to other duties towards his neighbour, than those of mere nature and religion: duties which he has engaged in by enjoying the benefits of the common union; and which amount to no more, than that he do contribute, on his part, to the subsistence and peace of the society.

It is likewise "a rule prescribed." Because a bare resolution contained in the breast of the legislator, without manifesting itself by some external sign, can never be properly a law. It is requisite that this resolution be notified to the people who are to obey it. But the manner in which this notification is to be made, is matter of very great indifference. It may be notified by universal tradition and long practice, which supposes a previous publication, and is the case of the common law of England and of Scotland. It may be notified *viva voce*, by officers appointed for that purpose; as is done with regard to proclamations, and such acts of parliament as are appointed to be publicly read in churches and other assemblies. It may, lastly, be notified by writings, printing, or the like; which is the general course taken with all our acts of parliament. Yet, whatever way is made use of, it is incumbent on the promulgators to do it in the most public and conspicuous manner: not like Caligula, who (according to Dio Cassius) wrote his laws in a very small character, and hung them up upon high pillars, the more

effectually to enslave the people. There is still a more unreasonable method than this, which is called making of laws *ex post facto*; when after an action (indifferent in itself) is committed, the legislator then for the first time declares it to have been a crime, and inflicts a punishment upon the person who has committed it. Here it is impossible that the party could foresee, that an action, innocent when it was done, should be afterwards converted to guilt by a subsequent law: he had therefore no cause to abstain from it; and all punishment for not abstaining must of consequence be cruel and unjust. All laws should be therefore made to commence *in futuro*, and be notified before their commencement; which is implied in the term "prescribed." But when this rule is in the usual manner notified or prescribed, it is then the subject's business to be thoroughly acquainted therewith; for if ignorance, of what he might know, were admitted as a legitimate excuse, the laws would be of no effect, but might always be eluded with impunity.

But further: Municipal law is "a rule of civil conduct prescribed by the supreme power in a state." For the legislature, as was before observed, is the greatest act of superiority that can be exercised by one being over another. Wherefore it is requisite to the very essence of a law, that it be made by the supreme power. Sovereignty and legislature are indeed convertible terms; one cannot subsist without the other.

This will naturally lead us into a short inquiry concerning the nature of society and civil government; and the natural inherent right that belongs to the sovereignty of a state, wherever that sovereignty be lodged, of making and enforcing laws.

The only true and natural foundations of society are the wants and fears of individuals. Not that we can believe, with some theoretical writers, that there ever was a time when there was no such thing as society; and that, from the impulse of reason, and through a sense of their wants and weaknesses, individuals met together in a large plain, entered into an original contract, and chose the tallest man present to be their governor. This notion, of an actually existing unconnected state of nature, is too wild to be seriously admitted: and besides, it is plainly contradictory to the revealed accounts of the primitive origin of mankind, and their preservation 2000 years afterwards; both which were effected by the means of single families. These formed the first society among themselves, which every day extended its limits; and when it grew too large to subsist with convenience in that pastoral state wherein the patriarchs appear to have lived, it necessarily subdivided itself by various migrations into more. Afterwards, as agriculture increased, which employs and can maintain a much greater number of hands, migrations became less frequent; and various tribes, which had formerly separated, reunited again; sometimes by compulsion and conquest, sometimes by accident, and sometimes perhaps by compact. But though society had not its formal beginning from any convention of individuals actuated by their wants and their fears; yet it is the sense of their weakness and imperfection that keeps mankind together; that demonstrates the necessity of this union; and that therefore is the solid and natural foundation, as well as the content, of society. And this is what we mean by the original

Of Laws  
in general.

original contract of society; which, though perhaps in no instance it has ever been formally expressed at the first institution of a state, yet in nature and reason must always be understood and implied in the very act of associating together: namely, that the whole should protect all its parts, and that every part should pay obedience to the will of the whole; or, in other words, that the community should guard the rights of each individual member, and that (in return for this protection) each individual should submit to the laws of the community; without which submission of all, it was impossible that protection could be certainly extended to any.

13  
Government.

For when society is once formed, government results of course, as necessary to preserve and to keep that society in order. Unless some superior be constituted, whose commands and decisions all the members are bound to obey, they would still remain as in a state of nature, without any judge upon earth to define their several rights, and redress their several wrongs. But as all the members of society are naturally equal, it may be asked, In whose hands are the reins of government to be entrusted? To this the general answer is easy: but the application of it to particular cases has occasioned one half of those mischiefs which are apt to proceed from misguided political zeal. In general, all mankind will agree, that government should be reposed in such persons, in whom those qualities are most likely to be found, the perfection of which is among the attributes of him who is emphatically styled the *Supreme Being*; the three grand requisites, namely, of wisdom, of goodness, and of power: wisdom, to discern the real interest of the community; goodness, to endeavour always to pursue that real interest; and strength or power to carry this knowledge and intention into action. These are the natural foundations of sovereignty, and these are the requisites that ought to be found in every well constituted frame of government.

How the several forms of government we now see in the world at first actually began, is matter of great uncertainty, and has occasioned infinite disputes. It is not our business or intention to enter into any of them. However they began, or by what right soever they subsist, there is and must be in all of them a supreme, irrefragable, absolute, uncontrolled authority, in which the *jura summi imperii*, or the rights of sovereignty, reside. And this authority is placed in those hands, wherein (according to the opinion of the founders of such respective states, either expressly given or collected from their tacit approbation) the qualities requisite for supremacy, wisdom, goodness, and power, are the most likely to be found.

14  
Different  
forms  
thereof.

The political writers of antiquity will not allow more than three regular forms of government: the first, when the sovereign power is lodged in an aggregate assembly consisting of all the members of a community which is called a *democracy*; the second, when it is lodged in a council composed of select members, and then it is styled an *aristocracy*; the last, when it is entrusted in the hands of a single person, and then it takes the name of a *monarchy*. All other species of government, they say, are either corruptions of, or reducible to, these three.

By the sovereign power, as was before observed, is  
No 176.

meant the making of laws; for wherever that power resides, all others must conform to and be directed by it, whatever appearance the outward form and administration of the government may put on. For it is at any time in the option of the legislature to alter that form and administration by a new edict or rule, and to put the execution of the laws into whatever hands it pleases: and all the other powers of the state must obey the legislative power in the execution of their several functions, or else the constitution is at an end.

In a democracy, where the right of making laws resides in the people at large, public virtue or goodness of intention is more likely to be found than either of the other qualities of government. Popular assemblies are frequently foolish in their contrivance, and weak in their execution; but generally mean to do the thing that is right and just, and have always a degree of patriotism or public spirit. In aristocracies there is more wisdom to be found than in the other forms of government; being composed, or intended to be composed, of the most experienced citizens: but there is less honesty than in a republic, and less strength than in a monarchy. A monarchy is indeed the most powerful of any, all the sinews of government being knit and united together in the hand of the prince; but then there is imminent danger of his employing that strength to improvident or oppressive purposes.

Thus these three species of government have all of them their several perfections and imperfections. Democracies are usually the best calculated to direct the end of a law; aristocracies, to invent the means by which that end shall be obtained; and monarchies, to carry those means into execution. And the ancients, as was observed, had in general no idea of any other permanent form of government but these three: for though Cicero declares himself of opinion, "*esse optime constitutam rempublicam, qua ex tribus generibus illis, regali, optimo, et populari, sit modice confusa*;" yet Tacitus treats this notion of a mixed government, formed out of them all, and partaking of the advantages of each, as a visionary whim, and one that, if effected, could never be lasting or secure.

But, happily for us of this island, the British constitution has long remained, and we trust will long continue, a standing exception to the truth of this observation. For, as with us the executive power of the laws is lodged in a single person, they have all the advantages of strength and dispatch that are to be found in the most absolute monarchy: and, as the legislature of the kingdom is entrusted to three distinct powers, entirely independent of each other; first, the king; secondly, the lords spiritual and temporal, which is an aristocratical assembly of persons selected for their piety, their birth, their wisdom, their valour, or their property; and, thirdly, the house of commons, freely chosen by the people from among themselves, which makes it a kind of democracy; as this aggregate body, actuated by different springs and attentive to different interests, composes the British parliament, and has the supreme disposal of every thing, there can no inconvenience be attempted by either of the three branches, but will be withstood by one of the other two, each branch being armed with a negative power sufficient to repel any innovation which it shall think inexpedient or dangerous.

Here;

Here, then, is lodged the sovereignty of the British constitution; and lodged as beneficially as is possible for society. For in no other shape could we be so certain of finding the three great qualities of government so well and so happily united. If the supreme power were lodged in any one of the three branches separately, we must be exposed to the inconveniences of either absolute monarchy, aristocracy, or democracy; and so want two of the three principal ingredients of good polity, either virtue, wisdom, or power. If it were lodged in any two of the branches; for instance, in the king and house of lords; our laws might be providently made and well executed, but they might not always have the good of the people in view: if lodged in the king and commons, we should want that circumspection and mediatory caution, which the wisdom of the peers is to afford: if the supreme rights of legislature were lodged in the two houses only, and the king had no negative upon their proceedings, they might be tempted to encroach upon the royal prerogative, or perhaps to abolish the kingly office, and thereby weaken (if not totally destroy) the strength of the executive power. But the constitutional government of this island is so admirably tempered and compounded, that nothing can endanger or hurt it, but destroying the equilibrium of power between one branch of the legislature and the rest. For if ever it should happen, that the independence of any one of the three should be lost, or that it should become subservient to the views of either of the other two, there would soon be an end of our constitution. The legislature would be changed from that which was originally set up by the general consent and fundamental act of the society: and such a change, however effected, is, according to Mr Locke (who perhaps carries his theory too far), at once an entire dissolution of the bands of government; and the people are thereby reduced to a state of anarchy, with liberty to constitute to themselves a new legislative power.

Having thus cursorily considered the three usual species of government, and our own singular constitution selected and compounded from them all, we proceed to observe, that, as the power of making laws constitutes the supreme authority, so wherever the supreme authority in any state resides, it is the right of that authority to make laws; that is, in the words of our definition, *to prescribe the rule of civil action*. And this may be discovered from the very end and institution of civil states. For a state is a collective body, composed of a multitude of individuals, united for their safety and convenience, and intending to act together as one man. If it therefore is to act as one man, it ought to act by one uniform will. But, inasmuch as political communities are made up of many natural persons, each of whom has his particular will and inclination, these several wills cannot by any natural union be joined together, or tempered and disposed into a lasting harmony, so as to constitute and produce that one uniform will of the whole. It can therefore be no otherwise produced than by a political union; by the consent of all persons to submit their own private wills to the will of one man, or of one or more assemblies of men, to whom the supreme authority is entrusted; and this will of that one man, or assemblage of men, is in

VOL. IX. Part II.

different states, according to their different constitutions, understood to be law.

Thus far as to the right of the supreme power to make laws: but farther, it is its duty likewise. For since the respective members are bound to conform themselves to the will of the state, it is expedient that they receive directions from the state declaratory of that its will. But as it is impossible, in so great a multitude, to give injunctions to every particular man, relative to each particular action, therefore the state establishes general rules, for the perpetual information and direction of all persons in all points, whether of positive or negative duty: and this, in order that every man may know what to look upon as his own, what as another's; what absolute and what relative duties are required at his hands; what is to be esteemed honest, dishonest, or indifferent; what decree every man retains of his natural liberty, and what he has given up as the price of the benefits of society; and after what manner each person is to moderate the use and exercise of those rights which the state assigns him, in order to promote and secure the public tranquillity.

From what has been advanced, the truth of the former branch of our definition is (we trust) sufficiently evident; that "municipal law is a rule of civil conduct, prescribed by the supreme power in a state." We proceed now to the latter branch of it; that it is a rule so prescribed, "commanding what is right, and prohibiting what is wrong."

Now, in order to do this completely, it is first of all necessary that the boundaries of right and wrong be established and ascertained by law. And when this is once done, it will follow of course, that it is likewise the business of the law, considered as a rule of civil conduct, to enforce these rights, and to restrain or redress these wrongs. It remains therefore only to consider, in what manner the law is said to ascertain the boundaries of right and wrong; and the methods which it takes to command the one and prohibit the other.

For this purpose, every law may be said to consist of several parts: one, declaratory; whereby the rights to be observed, and the wrongs to be eschewed, are clearly defined and laid down: another, directory; whereby the subject is instructed and enjoined to observe those rights, and to abstain from the commission of those wrongs: a third, remedial; whereby a method is pointed out to recover a man's private rights, or redress his private wrongs: to which may be added a fourth, usually termed the *sanction* or *vindictory* branch of the law; whereby it is signified what evil or penalty shall be incurred by such as commit any public wrongs, and transgress or neglect their duty.

With regard to the first of these, the declaratory part of the municipal law; this depends not so much upon the law of revelation or of nature, as upon the wisdom and will of the legislator. This doctrine, which before was slightly touched, deserves a more particular explication. Those rights, then, which God and nature have established, and are therefore called *natural rights*, such as are life and liberty, need not the aid of human laws to be more effectually invested in every man than they are; neither do they receive any additional strength

when declared by the municipal laws to be inviolable. On the contrary, no human legislature has power to abridge or destroy them, unless the owner shall himself commit some act that amounts to a forfeiture. Neither do divine or natural *duties* (such as, for instance, the worship of God, the maintenance of children, and the like) receive any stronger sanction from being also declared to be duties by the law of the land. The case is the same as to crimes and misdemeanours, that are forbidden by the superior laws, and therefore styled *mala in se*, such as murder, theft, and perjury; which contract no additional turpitude from being declared unlawful by the inferior legislature. For that legislature in all these cases acts only, as was before observed, in subordination to the Great Lawgiver, transcribing and publishing his precepts. So that, upon the whole, the declaratory part of the municipal law has no force or operation at all, with regard to actions that are naturally and intrinsically right or wrong.

But with regard to things in themselves indifferent, the case is entirely altered. These become either right or wrong, just or unjust, duties or misdemeanours, according as the municipal legislator sees proper, for promoting the welfare of the society, and more effectually carrying on the purposes of civil life. Thus our own common law has declared, that the goods of the wife do instantly upon marriage become the property and right of the husband; and our statute law has declared all monopolies a public offence: yet that right, and this offence, have no foundation in nature; but are merely created by the law, for the purposes of civil society. And sometimes, where the thing itself has its rise from the law of nature, the particular circumstances and mode of doing it become right or wrong, as the laws of the land shall direct. Thus, for instance, in civil duties; obedience to superiors is the doctrine of revealed as well as natural religion: but who those superiors shall be, and in what circumstances, or to what degrees they shall be obeyed, is the province of human laws to determine. And so, as to injuries or crimes, it must be left to our own legislature to decide, in what cases the seizing another's cattle shall amount to the crime of robbery; and where it shall be a justifiable action, as when a landlord takes them by way of distress for rent.

Thus much for the declaratory part of the municipal law: and the *directory* stands much upon the same footing; for this virtually includes the former, the declaration being usually collected from the direction. The law that says, "Thou shalt not steal," implies a declaration that stealing is a crime. And we have seen, that, in things naturally indifferent, the very essence of right and wrong depends upon the direction of the laws to do or to omit them.

The *remedial* part of a law is so necessary a consequence of the former two, that laws must be very vague and imperfect without it. For in vain would rights be declared, in vain directed to be observed, if there were no method of recovering and asserting those rights when wrongfully withheld or invaded. This is what we mean properly, when we speak of the protection of the law. When, for instance, the declaratory part of the law has said, "that the field or inheritance which belonged to Titius's father is vested by his

death in Titius," and the directory part has "forbidden any one to enter on another's property without the leave of the owner;" if Caius after this will presume to take possession of the land, the remedial part of the law will then interpose its office; will make Caius restore the possession to Titius, and also pay him damages for the invasion.

With regard to the sanction of laws, or the evil that may attend the breach of public duties; it is observed, that human legislators have for the most part chosen to make the sanction of their laws rather vindicatory than remuneratory, or to consist rather in punishments than in actual particular rewards: Because, in the first place, the quiet enjoyment and protection of all our civil rights and liberties, which are the sure and general consequence of obedience to the municipal law, are in themselves the best and most valuable of all rewards: because also, were the exercise of every virtue to be enforced by the proposal of particular rewards, it were impossible for any state to furnish stock enough for so profuse a bounty: and farther, because the dread of evil is a much more forcible principle of human actions than the prospect of good. For which reasons, though a prudent bestowing of rewards is sometimes of exquisite use, yet we find that those civil laws, which enforce and enjoin our duty, do seldom, if ever, propose any privilege or gift to such as obey the law; but do constantly come armed with a penalty denounced against transgressors, either expressly defining the nature and quantity of the punishment, or else leaving it to the discretion of the judges, and those who are intrusted with the care of putting the laws in execution.

Of all the parts of a law the most effectual is the *vindicatory*. For it is but lost labour to say, "Do this, or avoid that," unless we also declare, "This shall be the consequence of your non-compliance." We must therefore observe, that the main strength and force of a law consists in the penalty annexed to it. Herein is to be found the principal obligation of human laws.

Legislators and their laws are said to *compel* and *oblige*: not that, by any natural violence, they so constrain a man as to render it impossible for him to act otherwise than as they direct, which is the strict sense of obligation; but because, by declaring and exhibiting a penalty against offenders, they bring it to pass that no man can easily choose to transgress the law: since, by reason of the impending correction, compliance is in a high degree preferable to disobedience. And, even where rewards are proposed as well as punishments threatened, the obligation of the law seems chiefly to consist in the penalty: for rewards, in their nature, can only persuade and allure; nothing is compulsory but punishment.

It is true, it hath been holden, and very justly, by the principal of our ethical writers, that human laws are binding upon mens consciences. But if that were the only or most forcible obligation, the good only would regard the laws, and the bad would set them at defiance. And, true as this principle is, it must still be understood with some restriction. It holds, we apprehend, as to *rights*; and that, when the law has determined the field to belong to Titius, it is a matter of conscience no longer to withhold or to invade it. So also in regard to *natural duties*, and such offences as are

vol.

*mala in se*: here we are bound in conscience, because we are bound by superior laws, before those human laws were in being, to perform the one and abstain from the other. But in relation to those laws which enjoin only positive duties, and forbid only such things as are not *mala in se*, but *mala prohibita* merely, without any intermixture of moral guilt, annexing a penalty to non-compliance; here seems to be conscience no farther concerned, than by directing a submission to the penalty, in case of our breach of those laws: for otherwise the multitude of penal laws in a state would not only be looked upon as an impolitic, but would also be a very wicked, thing; if every such law were a snare for the conscience of the subject. But in these cases the alternative is offered to every man; "either abstain from this, or submit to such a penalty:" and his conscience will be clear, whichever side of the alternative he thinks proper to embrace. Thus, by the statutes for preserving the game, a penalty is denounced against every unqualified person that kills a hare, and against every person who possesses a partridge in August. And so too, by other statutes, pecuniary penalties are inflicted for exercising trades without serving an apprenticeship thereto, for erecting cottages without annexing four acres of land to each, for not burying the dead in woollen, for not performing statute-work on the public roads, and for innumerable other positive misdemeanors. Now these prohibitory laws do not make the transgression a moral offence, or sin: the only obligation in conscience is to submit to the penalty, if levied. It must, however, be observed, that we are here speaking of laws that are simply and purely penal, where the thing forbidden or enjoined is wholly a matter of indifference, and where the penalty inflicted is an adequate compensation for the civil inconvenience supposed to arise from the offence. But where disobedience to the law involves in it also any degree of public mischief or private injury, there it falls within our former distinction, and is also an offence against conscience.

We have now gone through the definition laid down of a municipal law; and have shown that it is "a rule—of civil conduct—prescribed—by the supreme power in a state—commanding what is right, and prohibiting what is wrong:" in the explication of which we have endeavoured to interweave a few useful principles, concerning the nature of civil government, and the obligation of human laws. Before we conclude this part, it may not be amiss to add a few observations concerning the interpretation of laws.

When any doubt arose upon the construction of the Roman laws, the usage was to state the case to the emperor in writing, and take his opinion upon it. This was certainly a bad method of interpretation. To interrogate the legislature to decide particular disputes, is not only endless, but affords great room for partiality and oppression. The answers of the emperor were called his rescripts, and these had in succeeding cases the force of perpetual laws; though they ought to be carefully distinguished, by every rational civilian, from those general constitutions which had only the nature of things for their guide. The emperor Marcinus, as his historian Capitolinus informs us, had once resolved to abolish these rescripts, and retain only the general edicts: he could not bear that the hasty

and crude answers of such princes as Commodus and Caracalla should be revered as laws. But Justinian thought otherwise, and he has preserved them all. In like manner the canon laws, or decretal epistles of the popes, are all of them rescripts in the strictest sense. Contrary to all true forms of reasoning, they argue from particulars to generals.

The fairest and most rational method to interpret the will of the legislator, is by exploring his intentions at the time when the law was made, by signs the most natural and probable. And these signs are either the words, the context, the subject matter, the effects and consequence, or the spirit and reason of the law. Let us take a short view of them all.

1. Words are generally to be understood in their usual and most known signification; not so much regarding the propriety of grammar, as their general and popular use. Thus the law mentioned by Puffendorf, which forbade a layman to lay hands on a priest, was adjudged to extend to him who had hurt a priest with a weapon. Again: Terms of art, or technical terms, must be taken according to the acceptation of the learned in each art, trade, and science. So in the act of settlement, where the crown of England is limited "to the princess Sophia, and the heirs of her body being Protestants, it becomes necessary to call in the assistance of lawyers, to ascertain the precise idea of the words "heirs of her body;" which in a legal sense comprise only certain of her lineal descendants. Lastly, where words are clearly repugnant in two laws, the latter law takes place of the elder; *leges posteriores priores contrarias abrogant*, is a maxim of universal law, as well as of our own constitutions. And accordingly it was laid down by a law of the twelve tables at Rome, *Quod populus postremum jusit, id jus ratum esto*.

2. If words happen to be still dubious, we may establish their meaning from the context; with which it may be of singular use to compare a word or a sentence, whenever they are ambiguous, equivocal, or intricate. Thus the proëme, or preamble, is often called in to help the construction of an act of parliament. Of the same nature and use is the comparison of a law with other laws that are made by the same legislator, that have some affinity with the subject, or that expressly relate to the same point. Thus, when the law of England declares murder to be felony without benefit of clergy, we must resort to the same law of England to learn what the benefit of clergy is: and, when the common law censures simoniacal contracts, it affords great light to the subject to consider what the canon law has adjudged to be simony.

3. As to the subject-matter, words are always to be understood as having a regard thereto; for that is always supposed to be in the eye of the legislator, and all his expressions directed to that end. Thus, when a law of Edward III. forbids all ecclesiastical persons to purchase provisions at Rome, it might seem to prohibit the buying of grain and other victual; but when we consider that the statute was made to repress the usurpations of the papal see, and that the nominations to benefices by the Pope were called *provisions*, we shall see that the restraint is intended to be laid upon such provisions only.

4. As to the effects and consequence, the rule is,

Of Laws  
in general.

That where words bear either none, or a very absurd signification, if literally understood, we must a little deviate from the received sense of them. Therefore the Bolognian law, mentioned by Puffendorf, which enacted "that whoever drew blood in the streets should be punished with the utmost severity," was held after long debate not to extend to the surgeon who opened the vein of a person that fell down in the street with a fit.

27

5. But, lastly, the most universal and effectual way of discovering the true meaning of a law, when the words are dubious, is by considering the *reason* and *spirit* of it, or the cause which moved the legislator to enact it. For when this reason ceases, the law itself ought likewise to cease with it. An instance of this is given in a case put by Cicero, or whoever was the author of the rhetorical treatise inscribed to Herennius. There was a law, That those who in a storm forsook the ship should forfeit all property therein, and the ship and lading should belong entirely to those who staid in it. In a dangerous tempest, all the mariners forsook the ship, except only one sick passenger, who by reason of his disease was unable to get out and escape. By chance the ship came safe to port. The sick man kept possession, and claimed the benefit of the law. Now here all the learned agree, that the sick man is not within the reason of the law; for the reason of making it was, to give encouragement to such as should venture their lives to save the vessel: but this is a merit which he could never pretend to, who neither staid in the ship upon that account, nor contributed any thing to its preservation.

[28] 34  
Equity.

From this method of interpreting laws by the reason of them, arises what we call *equity*: which is thus defined by Grotius, "the correction of that, wherein the law (by reason of its universality) is deficient." For since in laws all cases cannot be foreseen or expressed, it is necessary, that, when the general decrees of

the law come to be applied to particular cases, there should be somewhere a power vested of defining those circumstances, which (had they been foreseen) the legislator himself would have expressed. And these are the cases which, according to Grotius, "*lex non exacte definit, sed arbitrio boni viri permittit.*"

Equity thus depending, essentially, upon the particular circumstances of each individual case, there can be no established rules and fixed precepts of equity laid down, without destroying its very essence, and reducing it to a positive law. And, on the other hand, the liberty of considering all cases in an equitable light must not be indulged too far; lest thereby we destroy all law, and leave the decision of every question entirely in the breast of the judge. And law, without equity, though hard and disagreeable, is much more desirable for the public good, than equity without law; which would make every judge a legislator, and introduce most infinite confusion: as there would then be almost as many different rules of action laid down in our courts, as there are differences of capacity and sentiment in the human mind.

HAVING thus considered the nature of laws in general, we shall proceed to give a view of the particular law of our own country; 1. Of England; 2. Of Scotland. The English law, however, being too extensive to admit of detail in a body, we can only here give such a sketch of it as may be sufficient to show the connection of its parts; but the principal of these parts themselves are explained at large, under their proper names, in the general alphabet — A contrary method is followed with regard to the law of Scotland. This being less extensive, is given in a body, with all its parts not only in regular connection, but sufficiently explained; these parts, again, not being explained in the order of the alphabet, but marked with numerical references to their explanations in the system.

## PART II. THE LAW OF ENGLAND.

## INTRODUCTION.

THE municipal law of England, or the rule of civil conduct prescribed to the inhabitants of that kingdom, may with sufficient propriety be divided into two kinds: the *lex non scripta*, the unwritten or common law; and the *lex scripta*, the written or statute law.

36  
Common  
Law.

The *lex non scripta*, or unwritten law, includes not only general customs, or the common law properly so called; but also the particular customs of certain parts of the kingdom, and likewise these particular laws that are by custom observed only in certain courts and jurisdictions.

In calling these parts of the law *leges non scriptae*, we would not be understood as if all those laws were at present merely oral, or communicated from the former ages to the present solely by word of mouth. It is true indeed, that in the profound ignorance of letters which formerly overspread the whole western world, all laws were entirely traditional; for this plain reason, that the nations among which they prevailed had but little idea of writing. Thus the British as well as the

Gallic druids committed all their laws as well as learning to memory; and it is said of the primitive Saxons here, as well as their brethren on the continent, that *leges sola memoria et usu retinebant*. But, with us at present, the monuments and evidences of our legal customs are contained in the records of the several courts of justice, in books of reports and judicial decisions, and in the treatises of learned sages of the profession, preserved and handed down to us from the times of highest antiquity. However, we therefore style these parts of our law *leges non scriptae*, because their original institution and authority are not set down in writing, as acts of parliament are; but they receive their binding power, and the force of laws, by long and immemorial usage, and by their universal reception throughout the kingdom: in like manner as Aulus Gellius defines the *jus non scriptum* to be that which is *tacito et illiterato hominum consensu et moribus expressum*.

Our ancient lawyers, and particularly Fortescue, insist with abundance of warmth, that these customs are as old as the primitive Britons, and continued down through the several mutations of government and in-

habitants, to the present time, unchanged and unadulterated. This may be the case as to some. But in general, as Mr Selden in his notes observes, this assertion must be understood with many grains of allowance; and ought only to signify, as the truth seems to be, that there never was any formal exchange of one system of laws for another: though doubtless, by the intermixture of adventitious nations, the Romans, the Picts, the Saxons, the Danes, and the Normans, they must have insensibly introduced and incorporated many of their own customs with those that were before established; thereby, in all probability, improving the texture and wisdom of the whole, by the accumulated wisdom of divers particular countries. Our laws, saith lord Bacon, are mixed as our language; and as our language is so much the richer, the laws are the more complete.

And indeed our antiquarians and first historians do all positively assure us, that our body of laws is of this compounded nature. For they tell us, that in the time of Alfred the local customs of the several provinces of the kingdom were grown so various, that he found it expedient to compile his dome book, or *liber judicialis*, for the general use of the whole kingdom. This book is said to have been extant so late as the reign of Edward IV. but is now unfortunately lost. It contained, we may probably suppose, the principal maxims of the common law, the penalties for misdemeanors, and the forms of judicial proceedings. Thus much may at least be collected from that injunction to observe it, which we find in the laws of king Edward the elder, the son of Alfred. *Omnibus qui reipublice presunt etiam atque etiam mando, ut omnibus aequos se praebeant iudices, perinde ac in judiciali libro scriptum habetur: nec quinquam formident quin jus commune audacter libereque dicant.*

But the irruption and establishment of the Danes in England, which followed soon after, introduced new customs, and caused this code of Alfred in many provinces to fall into disuse, or at least to be mixed and debased with other laws of a coarser alloy. So that, about the beginning of the 11th century there were three principal systems of laws prevailing in different districts. 1. The *Mercen-Lage*, or Mercian laws, which were observed in many of the inland counties, and those bordering on the principality of Wales, the retreat of the ancient Britons; and therefore very probably intermixed with the British or Druidical customs. 2. The *West Saxon Lage*, or laws of the West Saxons, which obtained in the counties to the south and west of the island, from Kent to Devonshire. These were probably much the same with the laws of Alfred above-mentioned, being the municipal law of the far most considerable part of his dominions, and particularly including Berkshire, the seat of his peculiar residence. 3. The *Dane-Lage*, or Danish law, the very name of which speaks its original and composition. This was principally maintained in the rest of the midland counties, and also on the eastern coast, the part most exposed to the visits of that piratical people. As for the very northern provinces, they were at that time under a distinct government.

Out of these three laws, Roger Hoveden and Ranulphus Cestrensis informs us, king Edward the confessor extracted one uniform law, or digest of laws, to be observed throughout the whole kingdom; though

Hoveden and the author of an old manuscript chronicle assure us likewise, that this work was projected and begun by his grandfather king Edgar. And indeed a general digest of the same nature has been constantly found expedient, and therefore put in practice by other great nations, which were formed from an assemblage of little provinces, governed by peculiar customs. As in Portugal, under king Edward, about the beginning of the 15th century. In Spain, under Alonzo X. who about the year 1250 executed the plan of his father St Ferdinand, and collected all the provincial customs into one uniform law, in the celebrated code entitled *las partidas*. And in Sweden, about the same era, a universal body of common law was compiled out of the particular customs established by the laghman of every province, and entitled the *land's lagb*, being analogous to the common law of England.

Both these undertakings, of king Edgar and Edward the Confessor, seem to have been no more than a new edition, or fresh promulgation, of Alfred's code or dome-book, with such additions and improvements as the experience of a century and an half had suggested. For Alfred is generally styled by the same historians; the *legum Anglicanarum conditor*, as Edward the confessor is the *restitutor*. These, however, are the laws which our histories so often mention under the name of the *laws of Edward the Confessor*; which our ancestors struggled so hardly to maintain, under the first princes of the Norman line; and which subsequent princes so frequently promised to keep and to restore, as the most popular act they could do, when pressed by foreign emergencies or domestic discontents. These are the laws, that so vigorously withstood the repeated attacks of the civil law; which established in the 12th century a new Roman empire over the most of the states on the continent: states that have lost, and perhaps upon that account, their political liberties; while the free constitution of England, perhaps upon the same account, has been rather improved than debased. These, in short, are the laws which gave rise and origin to that collection of maxims and customs which is now known by the name of the *common law*. A name either given to it, in contradistinction to other laws, as the statute law, the civil law, the law merchant, and the like; or, more probably, as a law common to all the realm, the *jus commune* or *foleright*, mentioned by king Edward the Elder, after the abolition of the several provincial customs and particular laws before mentioned.

But though this is the most likely foundation of this collection of maxims and customs; yet the maxims and customs, so collected, are of higher antiquity than memory or history can reach: nothing being more difficult than to ascertain the precise beginning and first spring of an ancient and long established custom. Whence it is, that in our law the goodness of a custom depends upon its having been used time out of mind; or, in the solemnity of our legal phrase, time whereof the memory of man runneth not to the contrary. This it is that gives it its weight and authority; and of this nature are the maxims and customs which compose the common law, or *lex non scripta*, of this kingdom.

This unwritten, or common law, is properly distinguishable into three kinds: 1. General customs, which are the universal rule of the whole kingdom,

Law of  
England

and form the common law in its stricter and more usual signification. 2. Particular customs; which for the most part affect only the inhabitants of particular districts. 3. Certain particular laws; which by custom are adopted and used by some particular courts, of pretty general and extensive jurisdiction.

29  
First branch  
of the un-  
written  
law:  
General  
customs.

I. As to general customs, or the common law properly so called; this is that law, by which proceedings and determinations in the king's ordinary courts of justice are guided and directed. This, for the most part, settles the course in which lands descend by inheritance; the manner and form of acquiring and transferring property; the solemnities and obligation of contracts; the rules of expounding wills, deeds, and acts of parliament; the respective remedies of civil injuries; the several species of temporal offences, with the manner and degree of punishment, and an infinite number of minuter particulars, which diffuse themselves as extensively as the ordinary distribution of common justice requires. Thus, for example, that there shall be four superior courts of record, the chancery, the king's bench, the common pleas, and the exchequer;—that the eldest son alone is heir to his ancestor;—that property may be acquired and transferred by writing;—that a deed is of no validity unless sealed and delivered;—that wills shall be construed more favourably, and deeds more strictly;—that money lent upon bond is recoverable by action of debt;—that breaking the public peace is an offence, and punishable by fine and imprisonment:—all these are doctrines that are not set down in any written statute or ordinance; but depend merely upon immemorial usage, that is, upon common law, for their support.

Some have divided the common law into two principal grounds or foundations: 1. Established customs; such as that, where there are three brothers, the eldest brother shall be heir to the second, in exclusion of the youngest: and, 2. Established rules and maxims; as, “that the king can do no wrong, that no man shall be bound to accuse himself,” and the like. But these seem to be one and the same thing. For the authority of these maxims rests entirely upon general reception and usage; and the only method of proving that this or that maxim is a rule of the common law, is by showing that it hath been always the custom to observe it.

But here a very natural, and very material, question arises: How are these customs or maxims to be known, and by whom is their validity to be determined? The answer is, By the judges in the several courts of justice. They are the depository of the laws; the living oracles who must decide in all cases of doubt, and who are bound by an oath to decide according to the law of the land. Their knowledge of that law is derived from experience and study; from the *viginti annorum lustrationes*, which Fortescue mentions; and from being long personally accustomed to the judicial decisions of their predecessors. And indeed these judicial decisions are the principal and most authoritative evidence, that can be given, of the existence of such a custom as shall form a part of the common law. The judgment itself, and all the proceedings previous thereto, are carefully registered and preserved under the name of *records*, in public repositories set apart for that particular purpose; and to them frequent recourse is had, when any critical question arises, in the determination of which for-

mer precedents may give light or assistance. And therefore, even so early as the conquest, we find the *prætorum memoria eventorum* reckoned up as one of the chief qualifications of those who were held to be *legibus patrie optime instituti*. For it is an established rule, To abide by former precedents, where the same points come again in litigation: as well to keep the scale of justice even and steady, and not liable to waver with every new judge's opinion; as also because the law in that case being solemnly declared and determined, what before was uncertain, and perhaps indifferent, is now become a permanent rule, which it is not in the breast of any subsequent judge to alter or vary from according to his private sentiments: he being sworn to determine, not according to his own private judgment, but according to the known laws and customs of the land; not delegated to pronounce a new law, but to maintain and expound the old one. Yet this rule admits of exception, where the former determination is most evidently contrary to reason; much more if it be contrary to the divine law. But, even in such cases, the subsequent judges do not pretend to make a new law, but to vindicate the old one from misrepresentation. For if it be found that the former decision is manifestly absurd or unjust, it is declared, not that such a sentence was had law, but that it was not law; that is, that it is not the established custom of the realm, as has been erroneously determined. And hence it is that our lawyers are with justice so copious in their encomiums on the reason of the common law; that they tell us, that the law is the perfection of reason, that it always intends to conform thereto, and that what is not reason is not law. Not that the particular reason of every rule in the law can at this distance of time be always precisely assigned; but it is sufficient that there be nothing in the rule flatly contradictory to reason, and then the law will presume it to be well founded. And it hath been an ancient observation in the laws of England, that whenever a standing rule of law, of which the reason perhaps could not be remembered or discerned, hath been wantonly broke in upon by statutes or new resolutions, the wisdom of the rule hath in the end appeared from the inconveniences that have followed the innovation.

The doctrine of the law then is this: That precedents and rules must be followed, unless flatly absurd or unjust: for though their reason be not obvious at first view, yet we owe such a deference to former times, as not to suppose they acted wholly without consideration. To illustrate this doctrine by examples. It has been determined, time out of mind, that a brother of the half blood shall never succeed as heir to the estate of his half brother, but it shall rather escheat to the king, or other superior lord. Now this is a positive law, fixed and established by custom; which custom is evidenced by judicial decisions; and therefore can never be departed from by any modern judge without a breach of his oath and the law. For herein there is nothing repugnant to natural justice; though the artificial reason of it, drawn from the feudal law, may not be quite obvious to every body. And therefore, on account of a supposed hardship upon the half brother, a modern judge might wish it had been otherwise settled; yet it is not in his power to alter it. But if any court were now to determine, that an elder brother of the half blood might enter upon and seize any lands

lands that were purchased by his younger brother, no subsequent judges would scruple to declare that such prior determination was unjust, was unreasonable, and therefore was not law. So that the law, and the opinion of the judge, are not always convertible terms, or one and the same thing; since it sometimes may happen that the judge may mistake the law. Upon the whole, however, we may take it as a general rule, "That the decisions of courts of justice are the evidence of what is common law;" in the same manner as in the civil law, what the emperor had once determined was to serve for a guide for the future.

The decisions therefore of courts are held in the highest regard, and are not only preserved as authentic records in the treasuries of the several courts, but are handed out to public view in the numerous volumes of reports which furnish the lawyer's library. These reports are histories of the several cases, with a short summary of the proceedings, which are preserved at large in the record; the arguments on both sides, and the reasons the court gave for its judgment; taken down in short notes by persons present at the determination. And these serve as indexes to, and also to explain, the records; which always, in matters of consequence and nicety, the judges direct to be searched. The reports are extant in a regular series from the reign of king Edward II. inclusive; and from his time to that of Henry VIII. were taken by the prothonotaries, or chief scribes of the court, at the expense of the crown, and published annually, whence they are known under the denomination of the *year-books*. And it is much to be wished that this beneficial custom had, under proper regulations, been continued to this day; for though king James I. at the instance of lord Bacon, appointed two reporters, with a handsome stipend, for this purpose; yet that wise institution was soon neglected, and from the reign of Henry VIII. to the present time this task has been executed by many private and cotemporary hands; who sometimes through haste and inaccuracy, sometimes through mistake and want of skill, have published very crude and imperfect (perhaps contradictory) accounts of one and the same determination. Some of the most valuable of the ancient reports are those published by lord chief justice Coke; a man of infinite learning in his profession, though not a little infected with the pedantry and quaintness of the times he lived in, which appear strongly in all his works. However, his writings are so highly esteemed, that they are generally cited without the author's name (A).

Besides these reporters, there are also other authors, to whom great veneration and respect are paid by the students of the common law. Such are Glanvil and Bracton, Britton and Fleta, Littleton and Fitzherbert,

with some others of ancient date, whose treatises are cited as authority; and are evidence that cases have formerly happened in which such and such points were determined, which are now become settled and first principles. One of the last of these methodical writers in point of time, whose works are of any intimal authority in the courts of justice, and do not entirely depend on the strength of their quotations from older authors, is the same learned judge we have just mentioned, Sir Edward Coke; who hath written four volumes of Institutes, as he is pleased to call them, tho' they have little of the institutional method to warrant such a title. The first volume is a very extensive comment upon a little excellent treatise of tenures, compiled by judge Littleton in the reign of Edward IV. This comment is a rich mine of valuable common-law learning, collected and heaped together from the ancient reports and year-books, but greatly defective in method (B). The second volume is a comment upon many old acts of parliament, without any systematical order; the third a more methodical treatise of the pleas of the crown; and the fourth an account of the several species of courts (C).

And thus much for the first ground and chief cornerstone of the laws of England; which is general immemorial custom, or common law, from time to time declared in the decisions of the courts of justice; which decisions are preserved among the public records, explained in the reports, and digested for general use in the authoritative writings of the venerable sages of the law.

The Roman law, as practised in the times of its liberty, paid also a great regard to custom; but not so much as our law: it only then adopting it when the written law was deficient. Though the reasons alleged in the digest will fully justify our practice in making it of equal authority with, when it is not contradicted by, the written law. "For since (says Julianus) the written law binds us for no other reason but because it is approved by the judgment of the people, therefore those laws which the people have approved without writing ought also to bind every body. For where is the difference, whether the people declare their assent to a law by suffrage, or by a uniform course of acting accordingly?" Thus did they reason while Rome had some remains of her freedom; but, when the imperial tyranny came to be fully established, the civil laws speak a very different language. *Quod principi placuit legis habet vigorem, cum populus ei et in eum omne suum imperium et potestatem conferat*, says Ulpian. *Imperator solus et conditor et interpretis legis existimatur*, says the code. And again, *Sacrilegii instar est rescripto principis obviari*. And indeed it is one of the characteristic marks of British liberty, that the common law depends

(A) His reports, for instance, are styled *κατ' ἐξοχην*, "the reports;" and in quoting them we usually say, 1 or 2 Rep. not 1 or 2 Coke's Rep. as in citing other authors. The reports of judge Croke are also cited in a peculiar manner, by the name of those princes in whose reigns the cases reported in his three volumes were determined; viz. queen Elizabeth, king James, and king Charles I.; as well as by the number of each volume. For sometimes we call them 1, 2, and 3 Cro.; but more commonly Cro. Eliz. Cro. Jac. and Cro. Car.

(B) It is usually cited either by the name of Co. Litt. or as 1 Inst.

(C) These are cited as 2, 3, or 4 Inst. without any author's name. An honorary distinction, which we observed, is paid to the works of no other writer; the generality of reports and other tracts being quoted in the name of the compiler, as 2 Ventris, 4 Leonard, 1 Siderfin, and the like.

Law of  
England.

42  
Second  
branch of  
the unwrit-  
ten laws:  
Particular  
customs.

depends upon custom: which carries this internal evidence of freedom along with it, that it probably was introduced by the voluntary consent of the people.

II. The second branch of the unwritten laws of England are particular customs, or laws which affect only the inhabitants of particular districts.

These particular customs, or some of them, are without doubt the remains of that multitude of local customs before-mentioned, out of which the common law, as it now stands, was collected at first by king Alfred, and afterwards by king Edgar and Edward the confessor: each district mutually sacrificing some of its own special usages, in order that the whole kingdom might enjoy the benefit of one uniform and universal system of laws. But, for reasons that have been now long forgotten, particular counties, cities, towns, manors, and lordships, were very early indulged with the privilege of abiding by their own customs, in contradistinction to the rest of the nation at large: which privilege is confirmed to them by several acts of parliament.

Such is the custom of gavelkind in Kent and some other parts of the kingdom (though perhaps it was also general till the Norman conquest); which ordains, among other things, that not the eldest son only of the father shall succeed to his inheritance, but all the sons alike; and that, though the ancestor be attainted and hanged, yet the heir shall succeed to his estate, without any escheat to the lord.—Such is the custom that prevails in divers ancient boroughs, and therefore called *borough-english*, that the youngest son shall inherit the estate, in preference to all his elder brothers.—Such is the custom in other boroughs, that a widow shall be entitled, for her dower, to all her husband's lands; whereas at the common law she shall be endowed of one third part only.—Such also are the special and particular customs of manors, of which every one has more or less, and which bind all the copyhold tenants that hold of the said manors.—Such likewise is the custom of holding divers inferior courts, with power of trying causes, in cities and trading towns; the right of holding which, when no royal grant can be shown, depends entirely upon immemorial and established usage.—Such, lastly, are many particular customs within the city of London, with regard to trade, apprentices, widows, orphans, and a variety of other matters. All these are contrary to the general law of the land, and are good only by special usage; though the customs of London are also confirmed by act of parliament.

To this head may most properly be referred a particular system of customs used only among one set of the king's subjects, called the *custom of merchants*, or *lex mercatoria*: which, however different from the general rules of the common law, is yet ingrafted into it, and made a part of it; being allowed, for the benefit of trade, to be of the utmost validity in all commercial transactions; for it is a maxim of law, that *cuiuslibet in sua arte credendum est*.

The rules relating to particular customs regard either the *proof* of their existence; their *legality* when proved; or their usual method of *allowance*. And first we will consider the rules of *proof*.

As to gavelkind, and borough-english, the law takes particular notice of them; and there is no occasion to

N<sup>o</sup> 176.

prove, that such customs actually exist, but only that the lands in question are subject thereto. All other private customs must be particularly pleaded; and as well the existence of such customs must be shown, as that the thing in dispute is within the custom alleged. The trial in both cases (both to show the existence of the custom, as, "that in the manor of Dale lands shall descend only to the heirs male, and never to the heirs female;" and also to show "that the lands in question are within that manor") is by a jury of 12 men, and not by the judges; except the same particular custom has been before tried, determined, and recorded, in the same court.

The customs of London differ from all others in point of trial; for if the existence of the custom be brought in question, it shall not be tried by a jury, but by certificate from the lord mayor and aldermen by the mouth of their recorder; unless it be such a custom as the corporation is itself interested in, as a right of taking toll, &c. for then the law permits them not to certify on their own behalf.

When a custom is actually proved to exist, the next inquiry is into the legality of it; for if it is not a good custom, it ought to be no longer used. *Malus usus abolendus est*, is an established maxim of the law. To make a particular custom good, the following are necessary requisites.

1. That it have been used so long, that the memory of man runneth not to the contrary. So that, if any one can show the beginning of it, it is no good custom. For which reason, no custom can prevail against an express act of parliament; since the statute itself is a proof of a time when such a custom did not exist.

2. It must have been *continued*. Any interruption would cause a temporary ceasing: the revival gives it a new beginning, which will be within time of memory, and thereupon the custom will be void. But this must be understood with regard to an interruption of the right; for an interruption of the possession only, for 10 or 20 years, will not destroy the custom. As if the inhabitants of a parish have a customary right of watering their cattle at a certain pool, the custom is not destroyed though they do not use it for 10 years; it only becomes more difficult to prove; but if the right be any how discontinued for a day, the custom is quite at an end.

3. It must have been *peaceable*, and acquiesced in; not subject to contention and dispute. For as customs owe their original to common consent, their being immemorially disputed, either at law or otherwise, is a proof that such consent was wanting.

4. Customs must be *reasonable*; or rather, taken negatively, they must not be unreasonable. Which is not always, as Sir Edward Coke says, to be understood of every unlearned man's reason; but of artificial and legal reason, warranted by authority of law. Upon which account a custom may be good, though the particular reason of it cannot be assigned; for it sufficeth, if no good legal reason can be assigned against it. Thus a custom in a parish, that no man shall put his beasts into the common till the third of October, would be good; and yet it would be hard to show the reason why that day in particular is fixed upon, rather than the day before or after. But a custom, that no cattle

shall

of  
and.

shall be put in till the lord of the manor has first put in his, is unreasonable, and therefore bad: for peradventure the lord will never put in his; and then the tenants will lose all their profits.

5. Customs ought to be *certain*. A custom, that lands shall descend to the most worthy of the owner's blood, is void; for how shall this worth be determined? but a custom to descend to the next male of the blood exclusive of females, is certain, and therefore good. A custom to pay two pence an acre in lieu of tithes, is good; but to pay sometimes two pence and sometimes three pence, as the occupier of the land pleases, is bad for its uncertainty. Yet a custom, to pay a year's improved value for a fine on a copyhold estate, is good; though the value is a thing uncertain: for the value may at any time be ascertained; and the maxim of law is, *Id certum est, quod certum reddi potest*.

6. Customs, though established by consent, must be (when established) *compulsory*: and not left to the option of every man, whether he will use them or no. Therefore a custom, that all the inhabitants shall be rated toward the maintenance of a bridge, will be good; but a custom, that every man is to contribute thereto at his own pleasure, is idle and absurd, and indeed no custom at all.

7. Lastly, customs must be *consistent* with each other. One custom cannot be set up in opposition to another. For if both are really customs, then both are of equal antiquity, and both established by mutual consent: which to say of contradictory customs, is absurd. Therefore, if one man prescribes that by custom he has a right to have windows looking into another's garden the other cannot claim a right by custom to stop up or obstruct those windows: for these two contradictory customs cannot both be good, nor both stand together. He ought rather to deny the existence of the former custom.

Next, as to the *allowance* of special customs. Customs, in derogation of the common law, must be construed strictly. Thus, by the custom of gavelkind, an infant of 15 years may by one species of conveyance (called *a deed of feoffment*) convey away his lands in fee simple, or for ever. Yet this custom does not empower him to use any other conveyance, or even to lease them for seven years: for the custom must be strictly pursued. And, moreover, all special customs must submit to the king's prerogative. Therefore, if the king purchases lands of the nature of gavelkind, where all the sons inherit equally; yet, upon the king's demise, his eldest son shall succeed to those lands alone. And thus much for the second part of the *leges non scriptæ*, or those particular customs which affect particular persons or districts only.

III. The third branch of them are those peculiar laws which by custom are adopted and used only in certain peculiar courts and jurisdictions. And by these are understood the civil and canon laws.

It may seem a little improper, at first view, to rank these laws under the head of *leges non scriptæ*, or unwritten laws, seeing they are set forth by authority in their pandects, their codes, and their institutions; their councils, decrees, and decretals; and enforced by an immense number of expositions, decisions, and treatises of the learned in both branches of the law. But this is done after the example of Sir Matthew Hale,

Vol. IX. Part. II.

because it is most plain, that it is not on account of their being written laws, that either the canon law, or the civil law, have any obligation within this kingdom: neither do their force and efficacy depend upon their own intrinsic authority; which is the case of our written laws or acts of parliament. They bind not the subjects of England, because their materials were collected from popes or emperors; were digested by Justinian, or declared to be authentic by Gregory. These considerations give them no authority here: for the legislature of England doth not, nor ever did, recognize any foreign power, as superior or equal to it in this kingdom; or as having the right to give law to any the meanest of its subjects. But all the strength that either the papal or imperial laws have obtained in this realm (or indeed in any other kingdom in Europe) is only because they have been admitted and received by immemorial usage and custom in some particular cases, and some particular courts; and then they form a branch of the *leges non scriptæ*, or customary law: or else, because they are in some other cases introduced by consent of parliament, and then they owe their validity to the *leges scriptæ*, or statute law. This is expressly declared in those remarkable words of the statute 25 Hen. VIII. c. 21. addressed to the king's royal majesty.—“This your grace's realm, recognizing no superior under God but only your grace, hath been and is free from subjection to any man's laws, but only to such as have been devised, made, and ordained within this realm for the wealth of the same; or to such other as, by sufferance of your grace and your progenitors, the people of this your realm have taken at their free liberty, by their own consent, to be used among them; and have bound themselves by long use and custom to the observance of the same: not as to the observance of the laws of any foreign prince, potentate, or prelate; but as to the customed and ancient laws of this realm, originally established as laws of the same, by the said sufferance, consents, and custom; and none otherwife.”

1. By the civil law, absolutely taken, is generally understood the civil or municipal law of the Roman empire, as comprised in the institutes, the code, and the digest of the emperor Justinian, and the novel constitutions of himself and some of his successors; of which it may not be amiss to give a short and general account.

The Roman law (founded first upon the regal constitutions of their ancient kings, next upon the 12 tables of the decemviri, then upon the laws or statutes enacted by the senate or people, the edicts of the pretor, and the *responsa prudentum* or opinions of learned lawyers, and lastly upon the imperial decrees or constitutions of successive emperors) had grown to so great a bulk, or, as Livy expresses it, *tam immensus altiarum super alias acervatarum legum cumulus*, that they were computed to be many camels load by an author who preceded Justinian. This was in part remedied by the collections of three private lawyers, Gregorius, Hermogenes, and Papirius; and then by the emperor Theodosius the younger, by whose orders a code was compiled, A. D. 438, being a methodical collection of all the imperial constitutions then in force: which Theodosian code was the only book of civil law received as authentic in the western part of Europe, till

43  
Civil law.

Law of  
England.

many centuries after; and to this it is probable that the Franks and Goths might frequently pay some regard, in framing legal constitutions for their newly created kingdoms. For Justinian commanded only in the eastern remains of the empire; and it was under his auspices, that the present body of civil law was compiled and finished by Tribonian and other lawyers, about the year 533.

This consists of, 1. The institutes; which contain the elements or first principles of the Roman law, in four books. 2. The digests or pandects, in 50 books; containing the opinions and writings of eminent lawyers, digested in a systematical method. 3. A new code, or collection of imperial constitutions; the lapse of a whole century having rendered the former code of Theodosius imperfect. 4. The novels, or new constitutions, posterior in time to the other books, and amounting to a supplement to the code; containing new decrees of successive emperors, as new questions happened to arise. These form the body of Roman law, or *corpus juris civilis*, as published about the time of Justinian: which, however, fell soon into neglect and oblivion, till about the year 1130, when a copy of the digests was found at Amalfi in Italy; which accident, concurring with the policy of the Roman ecclesiastics, suddenly gave new vogue and authority to the civil law, introduced it into several nations, and occasioned that mighty inundation of voluminous comments, with which this system of law, more than any other, is now loaded.

<sup>45</sup> Canon law. 2. The canon law is a body of Roman ecclesiastical law, relative to such matters as that church either has, or pretends to have, the proper jurisdiction over. This is compiled from the opinions of the ancient Latin fathers, the decrees of general councils, the decretal epistles and bulls of the holy see. All which lay in the same disorder and confusion as the Roman civil law: till, about the year 1151, one Gratian an Italian monk, animated by the discovery of Justinian's pandects, reduced the ecclesiastical constitutions also into some method, in three books; which he entitled *Concordia discordantium canonum*, but which are generally known by the name of *Decretum Gratiani*. These reached as low as the time of Pope Alexander III. The subsequent papal decrees, to the pontificate of Gregory IX. were published in much the same method under the auspices of that pope, about the year 1230, in five books; entitled *Decretalia Gregorii noni*. A sixth book was added by Boniface VIII. about the year 1298, which is called *Sextus Decretalium*. The Clementine constitutions, or decrees of Clement V. were in like manner authenticated in 1317 by his successor John XXII.; who also published 20 constitutions of his own, called *Extravagantes Joannis*: all which in some measure answer to the novels of the civil law. To these have been since added some decrees of later popes in five books, called *Extravagantes Communes*. And all these together, Gratian's decree, Gregory's decretals, the sixth decretal, the Clementine constitutions, and the Extravagants of John and his successors, form the *corpus juris canonici*, or body of the Roman canon law.

Besides these pontifical collections, which during the times of popery were received as authentic in this island, as well as in other parts of Christendom, there

is also a kind of national canon law, composed of legatine and provincial constitutions, and adapted only to the exigencies of this church and kingdom. The legatine constitutions were ecclesiastical laws, enacted in national synods, held under the cardinals Otho and Othobon, legates from Pope Gregory IX. and Pope Clement IV. in the reign of King Henry III. about the years 1220 and 1268. The provincial constitutions are principally the decrees of provincial synods, held under divers archbishops of Canterbury, from Stephen Langton in the reign of Henry III. to Henry Chichele in the reign of Henry V.; and adopted also by the province of York in the reign of Henry VI. At the dawn of the reformation, in the reign of King Henry VIII. it was enacted in parliament, that a review should be had of the canon law; and till such review should be made, all canons, constitutions, ordinances and synodals provincial, being then already made, and not repugnant to the law of the land or the king's prerogative, should still be used and executed. And, as no such review has yet been perfected, upon this statute now depends the authority of the canon law in England.

As for the canons enacted by the clergy under James I. in the year 1603, and never confirmed in parliament, it has been solemnly adjudged upon the principles of law and the constitution, that where they are not merely declaratory of the ancient canon law, but are introductory of new regulations, they do not bind the laity, whatever regard the clergy may think proper to pay them.

There are four species of courts, in which the civil and canon laws are permitted under different restrictions to be used. 1. The courts of the archbishops and bishops, and their derivative officers; usually called *courts Christian*, (*curie Christianitatis*), or the *ecclesiastical courts*. 2. The military courts. 3. The courts of admiralty. 4. The courts of the two universities. In all, their reception in general, and the different degrees of that reception, are grounded entirely upon custom; corroborated in the latter instance by act of parliament, ratifying those charters which confirm the customary law of the universities. The more minute consideration of them will fall under their proper articles. It will suffice at present to remark a few particulars relative to them all, which may serve to inculcate more strongly the doctrine laid down concerning them.

1. And first, the courts of common law have the superintendency over these courts; to keep them within their jurisdictions; to determine wherein they exceed them; to restrain and prohibit such excess; and (in case of contumacy) to punish the officer who executes, and in some cases the judge who enforces, the sentence so declared to be illegal.

2. The common law has reserved to itself the exposition of all such acts of parliament, as concern either the extent of these courts, or the matters depending before them. And therefore, if these courts either refuse to allow these acts of parliament, or will expound them in any other sense than what the common law puts upon them, the king's courts at Westminster will grant prohibitions to restrain and control them.

3. An appeal lies from all these courts to the king, in the last resort; which proves that the jurisdiction exercised

exercised in them is derived from the crown of England, and not from any foreign potentate, or intrinsic authority of their own.—And, from these three strong marks and ensigns of superiority, it appears beyond a doubt, that the civil and canon laws, though admitted in some cases by custom in some courts, are only subordinate and *leges sub graviore lege*; and that thus admitted, restrained, altered, new-modelled, and amended, they are by no means with us a distinct independent species of laws, but are inferior branches of the customary or unwritten laws of England, properly called the *kings ecclesiastical, the king's military, the king's maritime, or the king's academical, laws*.

Let us next proceed to the *leges scriptæ*, the written laws of the kingdom; which are statutes, acts, or edicts, made by the king's majesty, by and with the advice of the lords spiritual and temporal and commons in parliament assembled. The oldest of these now extant, and printed in our statute books, is the famous *magna charta*, as confirmed in parliament 9 Hen. III. though doubtless there were many acts before that time, the records of which are now lost, and the determinations of them perhaps at present currently received for the maxims of the old common law.

The manner of making these statutes being explained under the articles BILL and PARLIAMENT, we shall here only take notice of the different kinds of statutes; and of some general rules with regard to their construction (D).

First, as to their several kinds. Statutes are either *general* or *special*, public or private. A general or public act is an universal rule that regards the whole community: and of this the courts of law are bound to take notice judicially and *ex officio*, without the statute being particularly pleaded, or formerly set forth, by the party who claims an advantage under it. Special or private acts are rather exceptions than rules, being those which only operate upon particular persons and private concerns; such as the Romans entitled *senatus decreta*, in contradistinction to the *senatus-consulta*, which regarded the whole community; and of these the judges are not bound to take notice, unless they be formally shewn and pleaded. Thus, to shew the distinction, the statute 13 Eliz. c. 10. to prevent spiritual persons from making leases for longer terms than 21 years or three lives, is a public act; it being

a rule prescribed to the whole body of spiritual persons in the nation: but an act to enable the bishop of Chester to make a lease to A. B. for 60 years, is an exception to this rule; it concerns only the parties and the bishop's successors, and is therefore a private act.

Statutes also are either *declaratory* of the common law, or *remedial* of some defects therein. Declaratory, where the old custom of the kingdom is almost fallen into disuse, or become disputable; in which case the parliament has thought proper, *in perpetuum rei testimonium*, and for avoiding all doubts and difficulties, to declare what the common law is and ever hath been. Thus the statute of treasons, 25 Edw. III. cap. 2. doth not make any new species of treasons: but only, for the benefit of the subject, declares and enumerates those several kinds of offence which before were treason at the common law. Remedial statutes are those which are made to supply such defects, and abridge such superfluities, in the common law, as arise either from the general imperfection of all human laws, from change of time and circumstances, from the mistakes and unadvised determinations of unlearned judges, or from any other cause whatsoever. And this being done, either by enlarging the common law where it was too narrow and circumscribed, or by restraining it where it was too lax and luxuriant, hath occasioned another subordinate division of remedial acts of parliament into *enlarging* and *restraining* statutes. To instance again in the case of treason. Clipping the current coin of the kingdom was an offence not sufficiently guarded against by the common law: therefore it was thought expedient by statute 5 Eliz. c. 11. to make it high treason, which it was not at the common law: so that this was an *enlarging* statute. At common law, also, spiritual corporations might lease out their estates for any term of years, till prevented by the statute 13 Eliz. before-mentioned: this was therefore a *restraining* statute.

Secondly, the rules to be observed with regard to the construction of statutes are principally these which

1. There are three points to be considered in the construction of all remedial statutes; the old law, the mischief, and the remedy; that is, how the common law stood at the making of the act; what the mischief was, for which the common law did not provide; and

(D) The method of citing these acts of parliament is various. Many of the ancient statutes are called after the name of the place where the parliament was held that made them; as the statutes of Merton and Marleberge, of Westminster, Gloucester, and Winchester. Others are denominated entirely from their subject; as the statutes of Wales and Ireland, the *articuli cleri*, and the *prerogativa regis*. Some are distinguished by their initial words, a method of citing very ancient: being used by the Jews, in denominating the books of the pentateuch; by the Christian church, in distinguishing their hymns and divine offices; by the Romanists, in describing their papal bulls; and in short by the whole body of ancient civilians and canonists, among whom this method of citation generally prevailed, not only with regard to chapters, but inferior sections also; in imitation of all which we still call some of the old statutes by their initial words, as the statute of *Quia emptores*, and that of *Circumspecte agatis*. But the most usual method of citing them, especially since the time of Edward II. is by naming the year of the king's reign in which the statute was made, together with the chapter or particular act, according to its numeral order; as, 9 Geo. II. c. 4. For all the acts of one session of parliament taken together make properly but one statute: and therefore, when two sessions have been held in one year, we usually mention stat. 1. or 2. Thus the bill of rights is cited, as 1 W. & M. st. 2. c. 2. signifying that it is the second chapter or act of the second statute or the laws made in the second sessions of parliament held in the first year of king William and queen Mary.

Law of  
England.

what remedy the parliament hath provided to cure this mischief. And it is the business of the judges so to construe the act, as to suppress the mischief and advance the remedy. Let us instance again in the same restraining statute of 13 Eliz. c. 10. By the common law, ecclesiastical corporations might let as long leases as they thought proper: the mischief was, that they let long and unreasonable leases, to the impoverishment of their successors: the remedy applied by the statute was by making void all leases by ecclesiastical bodies for longer terms than three lives or 21 years. Now in the construction of this statute it is held, that leases, tho' for a longer term, if made by a bishop, are not void during the bishop's continuance in his see; or, if made by a dean and chapter, they are not void during the continuance of the dean; for the act was made for the benefit and protection of the successor. The mischief is therefore sufficiently suppressed by vacating them after the determination of the interest of the granters; but the leases, during their continuance, being not within the mischief, are not within the remedy.

2. A statute, which treats of things or persons of an inferior rank, cannot by any *general words* be extended to those of a superior. So a statute, treating of "deans, prebendaries, parsons, vicars, and others having spiritual promotion," is held not to extend to bishops, though they have spiritual promotion; deans being the highest persons named, and bishops being of a still higher order.

3. Penal statutes must be construed strictly. Thus the statute 1 Edw. VI. c. 12. having enacted that those who are convicted of stealing *horses* should not have the benefit of clergy, the judges conceived that this did not extend to him who should steal but one *horse*, and therefore procured a new act for that purpose in the following year. And, to come nearer to our own times, by the statute 14 Geo. II. c. 6. stealing *sheep or other cattle*, was made felony without benefit of clergy. But these general words, "or other cattle," being looked upon as much too loose to create a capital offence, the act was held to extend to nothing but mere sheep. And therefore, in the next sessions, it was found necessary to make another statute, 15 Geo. II. c. 34. extending the former to bulls, cows, oxen, steers, bullocks, heifers, calves, and lambs, by name.

4. Statutes against frauds are to be liberally and beneficially expounded. This may seem a contradiction to the last rule; most statutes against frauds being in their consequences penal. But this difference is here to be taken: where the statute acts upon the offender, and inflicts a penalty, as the pillory or a fine, it is then to be taken strictly; but when the statute acts upon the offence, by setting aside the fraudulent transaction, here it is to be construed liberally. Upon this footing the statute of 13 Eliz. c. 5. which voids all gifts of goods, &c. made to defraud creditors and others, was held to extend by the general words to a gift made to defraud the queen of a forfeiture.

5. One part of a statute must be so construed by another, that the whole may (if possible) stand: *ut res magis valeat quam pereat*. As if land be vested in the king and his heirs by act of parliament, saving the right of A; and A has at that time a lease of it for three

years; here A shall hold it for his term of three years, and afterwards it shall go to the king. For this interpretation furnishes matter for every clause of the statute to work and operate upon. But,

6. A saving, totally repugnant to the body of the act, is void. If therefore an act of parliament vests land in the king and his heirs, saving the right of all persons whatsoever; or vests the land of A in the king, saving the right of A: in either of these cases the saving is totally repugnant to the body of the statute, and (if good) would render the statute of no effect or operation; and therefore the saving is void, and the land vests absolutely in the king.

7. Where the common law and a statute differ, the common law gives place to the statute; and an old statute gives place to a new one. And this upon the general principle laid down in the last section, that *leges posteriores priores contrarias abrogant*. But this is to be understood only when the latter statute is couched in negative terms, or by its matter necessarily implies a negative. As if a former act says, that a juror upon such a trial shall have twenty pounds a year, and a new statute comes and says he shall have twenty merks; here the latter statute, though it does not express, yet necessarily implies, a negative, and virtually repeals the former. For if twenty merks be made qualification sufficient, the former statute which requires twenty pounds is at an end. But if both the acts be merely affirmative, and the substance such that both may stand together, here the latter does not repeal the former, but they shall both have a concurrent efficacy. If by a former law an offence be indictable at the quarter-sessions, and a later law makes the same offence indictable at the assizes; here the jurisdiction of the sessions is not taken away, but both have a concurrent jurisdiction, and the offender may be prosecuted at either: unless the new statute subjoins express negative words; as, that the offence shall be indictable at the assizes, *and not elsewhere*.

8. If a statute, that repeals another, is itself repealed afterwards, the first statute is hereby revived, without any formal words for that purpose. So when the statutes of 26 and 35 Hen. VIII. declaring the king to be the supreme head of the church, were repealed by a statute 1 and 2 Philip and Mary, and this latter statute was afterwards repealed by an act of 1 Eliz. there needed not any express words of revival in queen Elizabeth's statute, but these acts of king Henry were impliedly and virtually revived.

9. Acts of parliament derogatory from the power of subsequent parliaments bind not. So the statute 11 Hen. VII. c. 1. which directs, that no person for assisting a king *de facto* shall be attainted of treason by act of parliament or otherwise, is held to be good only as to common prosecutions for high treason; but will not restrain or clog any parliamentary attainder. Because the legislature, being in truth the sovereign power, is always of equal, always of absolute authority: it acknowledges no superior upon earth, which the prior legislature must have been if its ordinances could bind the present parliament. And upon the same principle Cicero, in his letters to Atticus, treats with a proper contempt these restraining clauses, which endeavour to tie up the hands of succeeding legislatures.

of land. gislatures. "When you repeal the law itself (says he), you at the same time repeal the prohibitory clause which guards against such repeal."

10. Lastly, acts of parliament that are impossible to be performed are of no validity: and if there arise out of them collaterally any absurd consequences, manifestly contradictory to common reason, they are with regard to those collateral consequences void. We lay down the rule with these restrictions: though we know it is generally laid down more largely, that acts of parliament contrary to reason are void. But if the parliament will positively enact a thing to be done which is unreasonable, we know of no power that can control it: and the examples usually alleged in support of this sense of the rule do none of them prove that where the main object of a statute is unreasonable the judges are at liberty to reject it; for that were to set the judicial power above that of the legislature, which would be subversive of all government. But where some collateral matter arises out of the general words, and happens to be unreasonable: there the judges are in decency to conclude that this consequence was not foreseen by the parliament and therefore they are at liberty to expound the statute by equity, and only *quod hoc* disregard it. Thus if an act of parliament gives a man power to try all causes that arise within his manor of Dale: yet, if a cause should arise in which he himself is party, the act is construed not to extend to that, because it is unreasonable that any man should determine his own quarrel. But, if we could conceive it possible for the parliament to enact, that he should try as well his own causes as those of other persons, there is no court that has power to defeat the intent of the legislature, when couched in such evident and express words as leave no doubt whether it was the intent of the legislature or not.

These are the several grounds of the laws of England: over and above which, equity is also frequently called in to assist, to moderate, and to explain them. What equity is, and how impossible in its very essence to be reduced to stated rules, hath been shewn above. It may be sufficient, therefore, to add in this place, that, besides the liberality of sentiment with which our common-law judges interpret acts of parliament, and such rules of the unwritten law as are not of a positive kind, there are also courts of equity established for the benefit of the subject, to detect latent frauds and concealments, which the process of the courts of law is not adapted to reach: to enforce the execution of such matters of trust and confidence, as are binding in conscience, though not cognizable in a court of law; to deliver from such dangers as are owing to misfortune or oversight; and to give a more specific relief, and more adapted to the circumstances of the case, than can always be obtained by the generality of the rules of the positive or common law. This is the business of the courts of equity, which however are only conversant in matters of property. For the freedom of our constitution will not permit, that in criminal cases a power should be lodged in any judge to construe the law otherwise than according to the letter. This caution, while it admirably protects the public liberty, can never bear hard upon individuals. A man cannot suffer more punishment than the law assigns, but he may

suffer less. The laws cannot be strained by partiality to inflict a penalty beyond what the letter will warrant; but, in cases where the letter induces any apparent hardship, the crown has the power to pardon.

The objects of the laws of England are, 1. The rights of persons. 2. The rights of things. 3. Private wrongs. 4. Public wrongs.

Law of England, epit. mised.

## CHAP. I.

### Of the RIGHTS of PERSONS.

#### SECT. I. *Of the absolute rights of individuals.* [xiv]

(1.) THE objects of the *Laws* of England are, 1. *Rights*, 2. *Wrongs*.

(2.) *Rights* are the rights of *persons*, or the rights of *things*.

(3.) The rights of *persons* are such as concern, and are annexed to, the persons of men: and, when the person to whom they are due is regarded, they are called (simply) *rights*; but, when we consider the person from whom they are due, they are then denominated *duties*.

(4.) *Persons* are either *natural*, that is, such as they are formed by nature; or *artificial*, that is, created by human policy, as bodies politic or *corporations*.

(5.) The rights of *natural* persons are, 1. *Absolute*, or such as belong to individuals. 2. *Relative*, or such as regard members of society.

(6.) The *absolute rights of individuals*, regarded by the municipal laws (which pay no attention to *duties*, of the absolute kind), comprise what it called political or *civil liberty*.

(7.) Political or *civil liberty* is the natural liberty of mankind, so far restrained by human laws as is necessary for the good of society.

(8.) The absolute rights or civil liberties of Englishmen, as frequently declared in parliament, are principally three; the right of *personal security*, of *personal liberty*, and of *private property*.

(9.) The right of *personal security* consists in the legal enjoyment of life, limb, body, health, and reputation.

(10.) The right of *personal liberty* consists in the free power of loco-motion, without illegal restraint or banishment.

(11.) The right of *private property* consists in every man's free use and disposal of his own lawful acquisitions, without injury or illegal diminution.

(12.) Besides these three *primary* rights, there are others which are *secondary* and subordinate; *viz.* (to preserve the former from unlawful attacks) 1. The constitution and power of parliaments; 2. The limitation of the king's prerogative;—And (to vindicate them when actually violated) 3. The regular administration of public justice; 4. The right of petitioning for redress of grievances; 5. The right of having and using arms for self defence.

#### SECT. II. *Of the parliament.*

[xiv]

(1.) THE *relations* of persons are, 1. *Public*. 2. *Private*. The *public* relations are those of *magistrates* and *people*.

Law of  
England,  
epitomised.

people. *Magistrates* are *superior* or *subordinate*. And of *supreme magistrates*, in England, the *parliament* is the *supreme legislative*, the *king* the *supreme executive*.

(2.) *Parliaments*, in some shape, are of as high antiquity as the Saxon government in this island; and have subsisted, in their present form, at least five hundred years.

(3.) The parliament is assembled by the king's writs, and its sitting must not be intermitted above three years.

(4.) Its constituent parts are the king's majesty, the lords spiritual and temporal, and the commons represented by their members: each of which parts has a negative, or necessary, voice in making laws.

(5.) With regard to the *general law* of parliament; its power is absolute: each house is the judge of its own privileges; and all the members of either house are intitled to the privilege of speech, of person, of their domestics, and of their lands and goods.

(6.) The *peculiar privileges* of the lords (besides their judicial capacity), are to hunt in the king's forests; to be attended by the pages of the law; to make proxies; to enter procells; and to regulate the election of the 16 peers of North-Britain.

(7.) The *peculiar privileges* of the commons are to frame taxes for the subject; and to determine the merits of their own elections, with regard to the qualifications of the electors and elected, and the proceedings at elections themselves.

(8.) Bills are usually twice read in each house, committed, engrossed, and then read a third time; and when they have obtained the concurrence of both houses, and received the royal assent, they become *acts* of parliament.

(9.) The houses may adjourn themselves; but the king only can prorogue the parliament.

(10.) Parliaments are dissolved, 1. At the king's will. 2. By the demise of the crown, that is, within six months after. 3. By length of time, or having sat for the space of seven years.

[xlvi.]

### SECT. III. *Of the king and his title.*

(1.) THE *supreme executive power* of this kingdom is lodged in a single person; the king or queen.

(2.) This royal person may be considered with regard to, 1. His title. 2. His royal family. 3. His councils. 4. His duties. 5. His prerogative. 6. His revenue.

(3.) With regard to his *title*; the crown of England, by the positive constitution of the kingdom, hath ever been descendible, and so continues.

(4.) The crown is descendible in a course peculiar to itself.

(5.) This course of descent is subject to limitation by parliament.

(6.) Notwithstanding such limitations, the crown retains its descendible quality, and becomes hereditary in the prince to whom it is limited.

(7.) King Egbert, King Canute, and King William I. have been successively constituted the common stock, or ancestors, of this descent.

(8.) At the revolution the convention of estates, or representative body of the nation, declared, that the misconduct of King James II. amounted to an abdic-

tion of the government, and that the throne was thereby vacant.

(9.) In consequence of this vacancy, and from a regard to the ancient line, the convention appointed the next Protestant heirs of the blood royal of King Charles I. to fill the vacant throne, in the old order of succession; with a temporary exception, or preference, to the person of King William III.

(10.) On the impending failure of the Protestant line of King Charles I. (whereby the throne might again have become vacant) the king and parliament extended the settlement of the crown to the Protestant line of King James I. viz. to the Princess Sophia of Hanover, and the heirs of her body, being Protestants: And she is now the common stock, from whom the heirs of the crown must descend.

### SECT. IV. *Of the king's royal family.*

(1.) THE *king's royal family* consists, first, of the *queen*: who is regnant, consort, or dowager.

(2.) The *queen consort* is a public person, and hath many personal prerogatives and distinct revenues.

(3.) The Prince and Princess of Wales, and the Princess-royal, are peculiarly regarded by the law.

(4.) The other princes of the blood-royal are only intitled to precedence.

### SECT. V. *Of the councils belonging to the king.*

(1.) THE *king's councils* are, 1. The *parliament*. 2. The great council of *peers*. 3. The *judges*, for matters of law, 4. The *privy council*.

(2.) In *privy-counsellors* may be considered, 1. Their creation. 2. Their qualifications. 3. Their duties. 4. Their powers. 5. Their privileges. 6. Their dissolution.

### SECT. VI. *Of the king's duties.*

(1.) THE *king's duties* are to govern his people according to law, to execute judgment in mercy, and to maintain the established religion. These are his part of the original contract between himself and the people; founded in the nature of society, and expressed in his oath at the coronation.

### SECT. VII. *Of the king's prerogative.*

(1.) *PREROGATIVE* is that special power and pre-eminence which the king hath above other persons, and out of the ordinary course of law, in right of his regal dignity.

(2.) Such *prerogatives* are either *direct*, or *incidental*. The *incidental*, arising out of other matters, are considered as they arise: We now treat only of the *direct*.

(3.) The *direct prerogatives* regard, 1. The *king's dignity*, or royal character; 2. His *authority*, or regal power; 3. His *revenue*, or royal income.

(4.) The *king's dignity* consists in the legal attributes of, 1. Personal sovereignty. 2. Absolute perfection. 3. Political perpetuity.

(5.) In the *king's authority*, or regal power, consists the executive part of government.

(6.) In *foreign concerns*; the *king*, as the representative

Law  
Engla  
epitom

[xlvi.]

[xlvi.]

[xlvi.]

tive

of the nation, has the right or *prerogative*, 1. Of sending and receiving ambassadors. 2. Of making treaties. 3. Of proclaiming war or peace. 4. Of issuing reprisals. 5. Of granting safe conducts.

(7.) In *domestic* affairs; the *king* is, first, a constituent part of the supreme legislative power: hath a negative upon all new laws; and is bound by no statute, unless specially named therein.

(8.) He is also considered as the general of the kingdom, and may raise fleets and armies, build forts, appoint havens, erect beacons, prohibit the exportation of arms and ammunition, and confine his subjects within the realm, or recal them from foreign parts.

(9.) The *king* is also the fountain of justice, and general conservator of the peace; and therefore may erect courts (wherein he hath a legal ubiquity), prosecute offenders, pardon crimes, and issue proclamations.

(10.) He is likewise the fountain of honour, of office, and of privilege.

(11.) He is also the arbiter of *domestic* commerce; (not of *foreign*, which is regulated by the law of merchants); and is therefore intitled to the erection of public marts, the regulation of weights and measures, and the coinage or legitimization of money.

(12.) The *king* is, lastly, the supreme head of the church; and, as such, convenes, regulates, and dissolves synods, nominates bishops, and receives appeals in all ecclesiastical causes.

#### SECT. VIII. *Of the king's revenue.*

(1.) THE *king's revenue* is either *ordinary* or *extraordinary*. And the *ordinary* is, 1. *Ecclesiastical*. 2. *Temporal*.

(2.) THE *king's ecclesiastical* revenue consists in, 1. The custody of the temporalities of vacant bishoprics. 2. Corodies and pensions. 3. Extra-parochial tithes. 4. The first fruits and tenths of benefices.

(3.) THE *king's ordinary temporal* revenue consists in, 1. The demesne lands of the crown. 2. The hereditary excise; being part of the consideration for the purchase of his feudal profits, and the prerogatives of purveyance and pre-emption. 3. An annual sum issuing from the duty on wine-licences; being the residue of the same consideration. 4. His forests. 5. His courts of justice. 6. Royal fish. 7. Wrecks, and things jet-sam, flot-sam, and ligan. 8. Royal mines. 9. Treasure trove. 10. Waifs. 11. Estrays. 12. Forfeitures for offences, and deodands. 13. Escheats of lands. 14. Custody of idiots and lunatics.

(4.) THE *king's extraordinary revenue*, consists in aids, subsidies, and supplies, granted him by the commons in parliament.

(5.) Heretofore these were usually raised by grants of the (nominal) *tenth* or *fifteenth* part of the moveables in every township; or by scutages, hydages, and talliages; which were succeeded by *subsidies* assessed upon individuals, with respect to their lands and goods.

(6.) A new system of taxation took place about the time of the revolution: our modern taxes are therefore, 1. *Annual*. 2. *Perpetual*.

(7.) The *annual taxes* are, 1. The land-tax, or the ancient subsidy raised upon a new assessment. 2. The

malt-tax, being an annual excise on malt, mum, cyder, and perry.

(8.) The *perpetual* taxes are, 1. The customs, or tonnage and poundage of all merchandise exported or imported. 2. The excise-duty, or inland imposition on a great variety of commodities. 3. The salt-duty, or excise on salt. 4. The post office, or duty for the carriage of letters. 5. The stamp-duty on paper, parchment, &c. 6. The duty on houses and windows. 7. The duty on licences for hackney coaches and chaises. 8. The duty on offices and pensions.

(9.) Part of this revenue is applied to pay the interest of the national debt, till the principal is discharged by parliament.

(10.) The produce of these several taxes were originally separate and *specific funds*, to answer *specific loans* upon their respective credits; but are now consolidated by parliament into three principal funds, the *aggregate*, *general*, and *South-sea* funds, to answer all the debts of the nation: the public faith being also superadded, to supply deficiencies, and strengthen the security of the whole.

(11.) The surplusses of these funds, after paying the interest of the national debt, are carried together, and denominated the *sinking fund*: which, unless otherwise appropriated by parliament, is annually to be applied towards paying off some part of the principal.

(12.) But, previous to this, the *aggregate* fund is now charged with an annual sum for the *civil list*; which is the immediate proper revenue of the crown, settled by parliament on the king at his accession, for defraying the charges of civil government.

#### SECT. IX. *Of subordinate magistrates.*

(1.) SUBORDINATE magistrates, of the most general use and authority, are, 1. *Sheriffs*. 2. *Coroners*. 3. *Justices of the Peace*. 4. *Constables*. 5. *Surveyors of the highways*. 6. *Overseers of the poor*.

(2.) THE *sheriff* is the keeper of each county, annually nominated in due form by the king; and is (within his county) a judge, a conservator of the peace, a ministerial officer, and the king's bailiff.

(3.) *Coroners* are permanent officers of the crown in each county, elected by the freeholders; whose office it is to make inquiry concerning the death of the king's subjects, and certain revenues of the crown; and also, in particular cases, to supply the office of sheriff.

(4.) *Justices of the peace* are magistrates in each county, statutorily qualified, and commissioned by the king's majesty: with authority to conserve the peace; to hear and determine felonies, and other misdemeanors; and to do many other acts committed to their charge by particular statutes.

(5.) *Constables* are officers of hundreds and townships, appointed at the leet, and empowered to preserve the peace, to keep watch and ward, and to apprehend offenders.

(6.) *Surveyors of the highways* are officers appointed annually in every parish; to remove annoyances in, and direct the reparation of the public roads.

(7.) *Overseers of the poor* are officers appointed annually in every parish; to relieve such impotent, and employ such sturdy poor, as are *settled* in each parish, — by birth, — by parentage, — by marriage, — or by

Law of  
England,  
epitomised.

40 days residence; accompanied with, 1. Notice. 2. Renting a tenement of ten pounds annual value. 3. Paying their assessed taxations. 4. Serving an annual office. 5. Hiring and service for a year. 6. Apprenticeship for seven years. 7. Having a sufficient estate in the parish.

liii. SECT. X. *Of the people, whether aliens, denizens, or natives.*

(1.) THE *people* are either *aliens*, that is, born out of the dominions, or allegiance, of the crown of Great Britain; or *natives*, that is, born within it.

(2.) Allegiance is the duty of all subjects; being the reciprocal tie of the people to the prince in return for the protection he affords them; and, in *natives*, this duty of allegiance is natural and perpetual; in *aliens*, is local and temporary only.

(3.) The rights of *natives* are also natural and perpetual: those of *aliens*, local and temporary only; unless they be made denizens by the king, or naturalised by parliament.

liv. SECT. XI. *Of the clergy.*

(1.) THE *people*, whether aliens, denizens, or natives, are also either *clergy* that is, all persons in holy orders, or in ecclesiastical offices; or *laity*, which comprehends the rest of the nation.

(2.) The *clerical* part of the nation, thus defined, are, 1. Archbishops and bishops; who are elected by their several chapters, at the nomination of the crown, and afterwards confirmed and consecrated by each other. 2. Deans and chapters. 3. Archdeacons. 4. Rural deans. 5. Parsons (under which are included appropriators) and vicars; to whom there are generally requisite holy orders, presentation, institution, and induction. 6. Curates. To which may be added, 7. Church-wardens. 8. Parish-clerks and sextons.

lv. SECT. XII. *Of the civil state.*

(1.) THE *laity* are divisible into three states; *civil*, *military*, and *maritime*.

(2.) The *civil* state (which includes all the nation, except the clergy, the army, and the navy, and many individuals among them also), may be divided into the *nobility* and the *commonalty*.

(3.) The *nobility* are dukes, marquises, earls, viscounts, and barons. These had anciently duties annexed to their respective honours: they are created either by writ, that is, by summons to parliament; or by the king's letters-patent, that is, by royal grant: and they enjoy many privileges exclusive of their senatorial capacity.

(4.) The *commonalty* consist of knights of the garter, knights bannerets, baronets, knights of the bath, knights bannerets, esquires, gentlemen, yeomen, tradesmen, artificers, and labourers.

lvi. SECT. XIII. *Of the military and maritime states.*

(1.) THE *military* state, by the standing constitutional law, consists of the militia of each county, raised from among the people by lot, officered by the  
N<sup>o</sup> 176.

principal landholders, and commanded by the lord lieutenant.

(2.) The more disciplined occasional troops of the kingdom are kept on foot only from year to year by parliament; and, during that period, are governed by martial law, or arbitrary articles of war, formed at the pleasure of the crown.

(3.) The *maritime* state consists of the officers and mariners of the British navy; who are governed by express and permanent laws, or the articles of the navy, established by act of parliament.

SECT. XIV. *Of master and servant.*

(1.) THE *private*, economical, relations of persons are those of, 1. *Master and servant*. 2. *Husband and wife*. 3. *Parent and child*. 4. *Guardian and ward*.

(2.) The first relation may subsist between a *master* and four species of *servants*; (for slavery is unknown to our laws): viz. 1. Menial servants; who are *hired*. 2. Apprentices; who are *bound* by indentures. 3. Labourers; who are *casually employed*. 4. Stewards, bailiffs, and factors; who are rather in a *ministerial* state.

(3.) From this relation result divers powers to the master, and emoluments to the servant.

(4.) The master hath a property in the service of his servant; and must be answerable for such acts as the servant does by his express, or implied, command.

SECT. XV. *Of husband and wife.*

(1.) THE second private relation is that of *marriage*; which includes the reciprocal rights and duties of *husband and wife*.

(2.) *Marriage* is duly contracted between persons, 1. Consenting: 2. Free from canonical impediments, which make it *voidable*: 3. Free also from the civil impediments,—of prior marriage,—of want of age,—of non-consent of parents or guardians, where requisite,—and of want of reason; either of which make it *totally void*. And it must be celebrated by a clergyman in due form and place.

(3.) Marriage is dissolved, 1. By death. 2. By divorce in the spiritual court; not *a mensa et thoro* only, but *a vinculo matrimonii*, for canonical cause existing previous to the contract. 3. By act of parliament, as for adultery.

(4.) By marriage the husband and wife become one person in law; which unity is the principal foundation of their respective rights, duties, and disabilities.

SECT. XVI. *Of parent and child.*

(1.) THE third, and most universal private relation, is that of *parent and child*.

(2.) *Children* are, 1. *Legitimate*; being those who are born in lawful wedlock, or within a competent time after. 2. *Bastards*, being those who are not so.

(3.) The duties of parents to *legitimate* children are, 1. Maintenance. 2. Protection. 3. Education.

(4.) The power of parents consists principally in correction, and consent to marriage. Both may after death be delegated by will to a guardian; and the former also, living the parent, to a tutor or master.

(5.) The duties of *legitimate* children to parents are obedience, protection, and maintenance.

(6.)

Law of  
England  
epitomised

lvii.

lviii.

lix.

(6.) The duty of parents to *bastards* is only that of maintenance.

(7.) The rights of a *bastard* are such only as he can acquire; for he is incapable of inheriting any thing.

### SECT. XVII. *Of guardian and ward.*

(1.) THE fourth private relation is that of *guardian* and *ward*, which is plainly derived from the last; these being, during the continuance of their relation, reciprocally subject to the same rights and duties.

(2.) *Guardians* are of divers sorts: 1. Guardians by nature, or the parents. 2. Guardians for nurture, assigned by the ecclesiastical courts. 3. Guardians in so-called, assigned by the common law. 4. Guardians by statute, assigned by the father's will. All subject to the superintendance of the court of chancery.

(3.) *Full age* in male or female for all purposes is the age of 21 years (different ages being allowed for different purposes); till which age the person is an *infant*.

(4.) An *infant*, in respect of his tender years, hath various privileges, and various disabilities, in law; chiefly with regard to suits, crimes, estates, and contracts.

### SECT. XVIII. *Of corporations.*

(1.) BODIES politic, or *corporations*, which are artificial persons, are established for preserving in perpetual succession certain rights; which, being conferred on natural persons only, would fail in process of time.

(2.) Corporations are, 1. *Aggregate*, consisting of many members. 2. *Sole*, consisting of one person only.

(3.) Corporations are also either *spiritual*, erected to perpetuate the rights of the church; or *lay*. And the lay are, 1. *Civil*; erected for many temporal purposes. 2. *Eleemosynary*; erected to perpetuate the charity of the founder.

(4.) Corporations are usually erected and named, by virtue of the king's royal charter; but may be created by act of parliament.

(5.) The powers incident to all corporations are, 1. To maintain perpetual succession. 2. To act in their corporate capacity like an individual. 3. To hold lands, subject to the statutes of mortmain. 4. To have a common seal. 5. To make by-laws. Which last power, in spiritual or eleemosynary corporations, may be executed by the king or the founder.

(6.) The duty of corporations is to answer the ends of their institution.

(7.) To enforce this duty, all corporations may be *visited*: spiritual corporations by the ordinary; lay corporations by the founder, or his representatives: viz. the civil by the king (who is the *foundator incipiens* of all) represented in his court of king's bench; the eleemosynary by the endowor (who is the *foundator perficiens* of such), or by his heirs or assigns.

(8.) Corporations may be dissolved, 1. By act of parliament. 2. By the natural death of all their members. 3. By surrender of their franchises. 4. By forfeiture of their charter.

## CHAP. II.

### *Of the RIGHTS of THINGS.*

#### SECT. I. *Of Property in general.*

(1.) ALL *dominion* over external objects has its original from the gift of the Creator to man in general.

(2.) The *substance* of things was, at first, common to all mankind; yet a temporary property, in the *use* of them, might even then be acquired, and continued, by *occupancy*.

(3.) In process of time a permanent property was established in the *substance*, as well as the *use*, of things; which was also originally acquired by *occupancy* only.

(4.) Lest this property should determine by the owner's dereliction or death, whereby the thing would again become common, societies have established *covenances*, *wills*, and *heirships*, in order to continue the property of the first occupant: and, where by accident such property becomes discontinued or unknown, the thing usually results to the *sovereign* of the state, by virtue of the municipal law.

(5.) But of some things, which are incapable of permanent substantial dominion, there still subsists only the same transient usufructuary property, which originally subsisted in all things.

#### SECT. II. *Of real property; and, first, of corporeal hereditaments.*

(1.) IN this *property*, or exclusive dominion, consist the *rights of things*; which are, 1. Things *real*. 2. Things *personal*.

(2.) In things *real* may be considered, 1. Their several *kinds*. 2. The *tenures* by which they may be holden. 3. The *estates* which may be acquired therein. 4. Their *title*, or the means of acquiring and losing them.

(3.) All the several *kinds* of things real are reducible to one of these three, viz. *lands*, *tenements*, or *hereditaments*; whereof the second includes the first, and the third includes the first and second.

(4.) *Hereditaments*, therefore, or whatever may come to be inherited (being the most comprehensive denomination of things real), are either *corporeal* or *incorporeal*.

(5.) *Corporeal* hereditaments consist wholly of *lands*, in their largest legal sense; wherein they include not only the face of the earth, but every other object of sense adjoining thereto, and subsisting either above or beneath it.

#### SECT. III. *Of incorporeal hereditaments.*

(1.) INCORPOREAL hereditaments are rights issuing out of things corporeal, or concerning, or annexed to, or exercisable within the same.

(2.) Incorporeal hereditaments are, 1. *Advowsons*. 2. *Tithes*. 3. *Commons*. 4. *Ways*. 5. *Offices*. 6. *Dignities*. 7. *Franchises*. 8. *Corodies* or *pensions*. 9. *Annuities*. 10. *Rents*.

Law of  
England,  
epitomised.

(3.) An *advowson* is a right of presentation to an ecclesiastical benefice; either appendant, or in gross. This may be, 1. Presentative. 2. Collative. 3. Donative.

(4.) *Tithes* are the tenth part of the increase yearly arising from the profits and stock of lands, and the personal industry of mankind. These, by the ancient and positive law of the land, are due of common right to the parson, or (by endowment) to the vicar; unless specially discharged, 1. By real composition. 2. By prescription, either *de modo decimandi*, or *de non decimando*.

(5.) *Common* is a profit which a man hath in the lands of another; being, 1. Common of pasture; which is either appendant, appurtenant, because of vicinage, or in gross. 2. Common of piscary. 3. Common of turbary. 4. Common of estovers, or botes.

(6.) *Ways* are a right of passing over another man's ground.

(7.) *Offices* are the right to exercise a public or private employment.

(8.) For *dignities*, which are titles of honour, see Chap. I. Sect. 12.

(9.) *Franchises* are a royal privilege, or branch of the king's prerogative, subsiding in the hands of a subject.

(10.) *Corodies* are allotments for one's sustenance; which may be converted into *pensions*, see Chap. I. Sect. 8.

(11.) An *annuity* is a yearly sum of money, charged upon the person, and not upon the lands of the grantor.

(12.) *Rents* are a certain profit issuing yearly out of lands and tenements; and are reducible to, 1. Rent-service. 2. Rent-charge. 3. Rent-sock.

Irvi.

#### SECT. IV. *Of the Feodal System.*

(1.) THE doctrine of *tenures* is derived from the *feodal law*; which was planted in Europe by its northern conquerors at the dissolution of the Roman empire.

(2.) Pure and *proper feuds* were parcels of land allotted by a chief to his followers, to be held on the condition of personally rendering due military service to their lord.

(3.) These were granted by investiture; were held under the bond of fealty; were inheritable only by descendants; and could not be transferred without the mutual consent of the lord and vassal.

(4.) *Improper feuds* were derived from the other; but differed from them in their original, their services and renders, their descent, and other circumstances.

(5.) The lands of England were converted into *feuds*, of the improper kind, soon after the Norman conquest; which gave rise to the grand maxim of tenure, viz. That all lands in the kingdom are *holden*, mediately or immediately, of the king.

Irvi.

#### SECT. V. *Of the ancient English Tenures.*

(1.) THE distinction of tenures consisted in the nature of their services; as, 1. *Chivalry*, or *knight-service*; where the service was free, but uncertain. 2. *Free socage*; where the service was free, and certain. 3. *Pure villenage*; where the service was base, and uncertain.

4. *Privileged villenage*, or *villain socage*; where the service was base, but certain.

(2.) The most universal ancient tenure was that in *chivalry*, or by *knight-service*; in which the tenant of every knight's fee was bound, if called upon, to attend his lord to the wars. This was granted by livery, and perfected by homage and fealty; which usually drew after them suit of court.

(3.) The other fruits and consequences of the tenure by knight-service were, 1. Aid. 2. Relief. 3. Primer seisin. 4. Wardship. 5. Marriage. 6. Fines upon alienation. 7. Escheat.

(4.) *Grand serjeanty* differed from chivalry principally in its render, or service; and not in its fruits and consequences.

(5.) The personal service in chivalry was at length gradually changed into pecuniary assessments, which were called *scutage* or *escuage*.

(6.) These military tenures (except the services of grand serjeanty) were, at the restoration of King Charles, totally abolished, and reduced to free socage by act of parliament.

#### SECT. VI. *Of the modern English Tenures.*

Irvi.

(1.) *FREE socage* is a tenure by any free, certain, and determinate service.

(2.) This tenure, the relic of Saxon liberty, includes *petit serjeanty*, tenure in *burgage*, and *gavelkind*.

(3.) Free socage lands partake strongly of the feodal nature, as well as those in chivalry: being holden; subject to some service, at the least to fealty and suit of court; subject to relief, to wardship, and to escheat, but not to marriage; subject also formerly to aids, primer seisin, and fines for alienation.

(4.) *Pure villenage* was a precarious and slavish tenure, at the absolute will of the lord, upon uncertain services of the basest nature.

(5.) From hence, by tacit consent or encroachment, have arisen the modern *copyholds*, or tenure by copy of court-roll; in which lands may be still held at the (nominal) will of the lord, (but regulated) according to the custom of the manor.

(6.) These are subject, like socage lands, to services relief, and escheat; and also to heriots, wardship, and fines upon descent and alienation.

(7.) *Privileged villenage*, or *villain socage*, is an exalted species of copyhold tenure, upon base, but certain, services; subsisting only in the ancient demesnes of the crown; whence the tenure is denominated the tenure in *ancient demesne*.

(8.) These copyholds of ancient demesne have divers immunities annexed to their tenure; but are still held by copy of court-roll, according to the custom of the manor, though not at the will of the lord.

(9.) *Frankalmoin* is a tenure by spiritual services at large, whereby many ecclesiastical and eleemosynary corporations now hold their lands and tenements; being of a nature distinct from tenure by divine service in certain.

#### SECT. VII. *Of freehold estates of inheritance.*

Irvi.

(1.) *ESTATES* in lands, tenements, and hereditaments, are such interest as the tenant hath therein; to ascertain which, may be considered, 1. The *quantity*

of

of *interest*. 2. The *time of enjoyment*. 3. The *number and connections of the tenants*.

Law of England, epitomized.

(2.) Estates, with respect to their *quantity of interest*, or duration, are either *freehold*, or *less than freehold*.

(3.) A *freehold* estate, in lands, is such as is created by livery of seisin at common law; or, in tenements of an incorporeal nature, by what is equivalent thereto.

(4.) Freehold estates are either estates of *inheritance*, or *not of inheritance*, viz. for *life only*: and inheritances are, 1. *Absolute*, or *fee simple*. 2. *Limited fees*.

(5.) Tenant in *fee simple* is he that hath lands, tenements, or hereditaments, to hold to him and his heirs for ever.

(6.) *Limited fees* are, 1. *Qualified*, or *base*, fees. 2. *Fees conditional* at the common law.

(7.) *Qualified* or *base* fees are those which, having a qualification subjoined thereto, are liable to be defeated when that qualification is at an end.

(8.) *Conditional* fees, at the common law, were such as were granted to the donee, and the heirs of his body, in exclusion of collateral heirs.

(9.) These were held to be fees, granted on condition that the donee had issue of his body; which condition being once performed by the birth of issue, the donee might immediately aliene the land: but the statute *de donis* being made to prevent such alteration, thereupon from the division of the fee (by contrivance of this statute) into a particular estate and a reversion, the conditional fees began to be called *fees tail*.

(10.) All tenements real, or favouring of the realty, are subject to entails.

(11.) Estates tail may be, 1. *general*, or *special*; 2. *male*; or *female*; 3. given in *frank marriage*.

(12.) Incident to estates tail are, 1. *Waite*. 2. *Dower*. 3. *Curtesy*. 4. *Bar*;—by *fine*, *recovery*, or *livery warranty* with *affets*.

(13.) Estates tail are now, by many statutes and resolutions of the courts, almost brought back to the state of conditional fees at the common law.

(6.) This estate partakes both of the incidents to an estate tail, and those of an estate for life.

(7.) Tenancy by the *curtesy* of England is where a man's wife is seised of an estate of inheritance; and he by her has issue, born alive, which was capable of inheriting her estate; in which case he shall, upon her death, hold the tenements for his own life, as tenant by the *curtesy*.

(8.) Tenancy in *dower* is where a woman's husband is seised of an estate of inheritance, of which her issue might by any possibility have been heir; and the husband dies: the woman is thereupon intitled to *dower*, or one third part of the lands and tenements, to hold for her natural life.

(9.) Dower is either by the common law; by special custom; *ad usum ecclesie*; or, *ex assensu patris*.

(10.) Dower may be forfeited or barred, particularly by an estate in *jointure*.

SECT. IX. *Of estates less than freehold.*

lxxi.

(1.) ESTATES less than freehold are, 1. Estates for *years*. 2. Estates at *will*. 3. Estates at *sufferance*.

(2.) An estate for *years* is where a man, seised of lands and tenements, letteth them to another for a certain period of time, which transfers the interest of the term; and the lessee enters thereon, which gives him possession of the term, but not legal seisin of the land.

(3.) Incident to this estate are *estovers*; and also *emblements*, if it determines before the full end of the term.

(4.) An estate at *will* is where lands are let by one man to another, to hold at the will of both parties; and the lessee enters thereon.

(5.) *Copysolds* are estates held at the will of the lord, (regulated) according to the custom of the manor.

(6.) An estate at *sufferance* is where one comes into possession of land by lawful title, but keeps it afterwards without any title at all.

SECT. X. *Of estates upon condition.*

lxxii.

(1.) ESTATES (whether freehold or otherwise) may also be held upon *condition*; in which case their existence depends on the happening, or not happening, of some uncertain event.

(2.) These estates are, 1. On condition *implied*. 2. On condition *expressed*. 3. Estates in *gage*. 4. Estates by *statute*, merchant or staple. 5. Estates by *elegit*.

(3.) Estates on condition *implied* are where a grant of an estate has, from its essence and constitution, a condition inseparably annexed to it; though none be expressed in words.

(4.) Estates on condition *expressed* are where an express qualification or provision is annexed to the grant of an estate.

(5.) On the performance of these conditions either expressed or implied (if *precedent*) the estate may be vested or enlarged; or, on the breach of them (if *subsequent*) an estate already vested may be defeated.

(6.) Estates in *gage*, *in wadio*, or in pledge, are estates granted as a security for money lent; being,

SECT. VIII. *Of freeholds, not of inheritance.*

(1.) FREEHOLDS, *not of inheritance*, or for *life only*, are, 1. *Conventional*, or created by the act of the parties. 2. *Legal*, or created by operation of law.

(2.) *Conventional* estates for *life* are created by an express grant for term of one's own life, or *pur autre vie*; or by a general grant, without expressing any term at all.

(3.) Incident to this, and all other estates for life, are *estovers*, and *emblements*: and to estates *per autre vie* general occupancy was also incident; as special occupancy still is, if *cestuy que vie* survives the tenant.

(4.) *Legal* estates for *life* are, 1. Tenancy *in tail*, after *possibility* of issue *extinct*. 2. Tenancy by the *curtesy* of England. 3. Tenancy in *dower*.

(5.) Tenancy *in tail*, after *possibility* of issue *extinct*, is where an estate is given in special tail; and, before issue had, a person dies from whose body the issue was to spring; whereupon the tenant (if surviving) becomes tenant *in tail*, after *possibility* of issue *extinct*.

Law of  
England,  
epitomised.

1. *In vivo vado*, or *living gage*; where the profits of land are granted till a debt be paid, upon which payment the grantor's estate will revive. 2. *In mortuo vado*, in *dead*, or *mort gage*; where an estate is granted, on condition to be void at a day certain, if the grantor then repays the money borrowed; on failure of which, the estate becomes absolutely dead to the grantor.

(7.) Estates by *statute-merchant*, or *statute-staple*, are also estates conveyed to creditors, in pursuance of certain statutes, till their profits shall discharge the debt.

(8.) Estates by *elegit* are where, in consequence of a judicial writ so called, lands are delivered by the sheriff to a plaintiff, till their profits shall satisfy a debt adjudged to be due by law.

lxiii. SECT. XI. *Of estates in possession, remainder, and reversion.*

(1.) ESTATES, with respect to their *time of enjoyment*, are either in *immediate possession*, or in *expectancy*; which estates in *expectancy* are created at the same time, and are parcel of the same estates, as those upon which they are expectant. These are, 1. *Remainders*. 2. *Reversions*.

(2.) A *remainder* is an estate limited to take effect, and be enjoyed, after another *particular* estate is determined.

(3.) Therefore, 1. There must be a precedent particular estate, in order to support a remainder. 2. The remainder must pass out of the grantor, at the creation of the particular estate. 3. The remainder must vest in the grantee, during the continuance, or at the determination, of the particular estate.

(4.) Remainders are, 1. *Vested*; where the estate is fixed to remain to a *certain* person, after the particular estate is spent. 2. *Contingent*; where the estate is limited to take effect, either to an *uncertain* person, or upon an *uncertain* event.

(5.) An *executory devise* is such a disposition of lands, by will, that an estate shall not vest thereby at the death of the deviser, but only upon some future contingency, and without any precedent particular estate to support it.

(6.) A *reversion* is the residue of an estate left in the grantor, to commence in possession after the determination of some *particular* estate granted: to which are incident *fealty*, and *rent*.

(7.) Where two estates, the one less, the other greater, the one in possession, the other in expectancy, meet together in one and the same person, and in one and the same right, the less is *merged* in the greater.

lxiv. SECT. XII. *Of estates, in severalty, joint tenancy, coparcenary, and common.*

(1.) ESTATES, with respect to the *number and conditions* of their *tenants*, may be held, 1. *In severalty*. 2. *In joint-tenancy*. 3. *In coparcenary*. 4. *In common*.

(2.) An estate in *severalty* is where one tenant holds it in his own sole right, without any other person being joined with him.

(3.) An estate in *joint-tenancy* is where an estate is granted to two or more persons; in which case the law construes them to be *joint-tenants*, unless the words of the grant expressly exclude such construction.

(4.) Joint-tenants have an unity of interest, of title, of time, and of possession: they are seized *per my & per tout*: and therefore upon the decease of one joint-tenant, the whole interest remains to the survivor.

(5.) Joint-tenancy may be dissolved, by destroying one of its four constituent unities.

(6.) An estate in *coparcenary* is where an estate of inheritance descends from the ancestor to two or more persons; who are called *parceners*, and all together make but one heir.

(7.) Parceners have an unity of interest, title, and possession; but are only seized *per my*, and not *per tout*: wherefore there is no survivorship among parceners.

(8.) Incident to this estate is the law of *hotchpot*.

(9.) Coparcenary may also be dissolved, by destroying any of its three constituent unities.

(10.) An estate in *common* is where two or more persons hold lands, possibly by distinct titles, and for distinct interests; but by unity of possession, because none knoweth his own severalty.

(11.) Tenants in common have therefore an unity of possession, (without survivorship; being seized *per my*, and not *per tout*;) but no necessary unity of title, time, or interest.

(12.) This estate may be created, 1. By dissolving the constituent unities of the two former; 2. By express limitation in a grant: and may be destroyed, 1. By uniting the several titles in one tenant; 2. By partition of the land.

SECT. XIII. *Of the title to things real, in general.*

(1.) A *title* to things real is the means whereby a man cometh to the just possession of his property.

(2.) Herein may be considered, 1. A mere or naked possession. 2. The right of possession; which is, *1<sup>st</sup>*, an apparent, *2<sup>ly</sup>*, an actual right. 3. The mere right of property. 4. The conjunction of actual possession with both these rights; which constitutes a perfect title.

SECT. XIV. *Of title by descent.*

(1.) THE *title* to things real may be reciprocally acquired or lost, 1. *By descent*. 2. *By purchase*.

(2.) *Descent* is the means whereby a man, on the death of his ancestor, acquires a title to his estate, in right of representation, as his *heir* at law.

(3.) To understand the doctrine of descents, we must form a clear notion of *consanguinity*; which is the connection or relation, of persons descended from the same stock or common ancestor; and it is, 1. *Lineal*, where one of the kinsmen is lineally descended from the other. 2. *Collateral*, where they are lineally descended, not one from the other, but both from the same common ancestor.

(4.) The rules of descent, or *canons*, of inheritance, observed by the laws of England, are these:

*1<sup>st</sup>*, Inheritances shall lineally descend to the issue of the

unified

Law of  
England,  
promised.

lxxx.

SECT. XVIII. *Of title by forfeiture.*

(1.) FORFEITURE is a punishment annexed by law to some illegal act, or negligence, in the owner of things real; whereby the estate is transferred to another, who is usually the party injured.

(2.) Forfeitures are occasioned, 1. By crimes. 2. By alienation, contrary to law. 3. By lapse. 4. By simony. 5. By nonperformance of conditions. 6. By waste. 7. By breach of copyhold customs. 8. By bankruptcy.

(3.) Forfeitures for crimes, or misdemeanors, are for, 1. Treason. 2. Felony. 3. Misprision of treason. 4. *Præmunire*. 5. Assaults on a judge, and batteries, sitting the courts. 6. Popish recusancy, &c.

(4.) Alienations, or conveyances, which induce a forfeiture, are, 1. Those in mortmain, made to corporations contrary to the statute law. 2. Those made to aliens. 3. Those made by particular tenants, when larger than their estates will warrant.

(5.) *Lapse* is a forfeiture of the right of presentation to a vacant church, by neglect of the patron to present within six calendar months.

(6.) *Simony* is the corrupt presentation of any one to an ecclesiastical benefice, whereby that turn becomes forfeited to the crown.

(7.) For forfeiture by nonperformance of conditions, see Sect. 10.

(8.) *Waste* is a spoil, or destruction, in any corporeal hereditaments, to the prejudice of him that hath the inheritance.

(9.) Copyhold estates may have also other peculiar causes of forfeiture, according to the custom of the manor.

(10.) *Bankruptcy* is the act of becoming a bankrupt; that is, a trader who secretes himself, or does certain other acts tending to defraud his creditors, (See Sect. 22.)

(11.) By bankruptcy all the estates of the bankrupt are transferred to the assignees of his commissioners, to be sold for the benefit of his creditors.

SECT. XIX. *Of title by alienation.*

lxxxi.

(1.) ALIENATION, conveyance, or purchase in its more limited sense, is a means of transferring real estates, wherein they are voluntarily resigned by one man, and accepted by another.

(2.) This formerly could not be done by a tenant, without licence from his lord; nor by a lord, without attornment of his tenant.

(3.) All persons are capable of purchasing; and all that are in possession of any estates, are capable of conveying them: unless under peculiar disabilities by law; as being attainted, non compos, infants, under dures, feme-coverts, aliens, or papists.

(4.) Alienations are made by common assurances; which are, 1. By deed, or matter in pais. 2. By matter of record. 3. By special custom. 4. By devise.

SECT. XX. *Of alienation by deed.*

lxxxii.

(1.) In assurances by deed may be considered, 1. Its general nature. 2. Its several species.

(2.) A deed, in general, is the solemn act of the parties;

1

the person last actually seized, in infinitum; but shall never lineally ascend.

2d, The male issue shall be admitted before the female.

3d, Where there are two or more males in equal degree, the eldest only shall inherit; but the females all together.

4th, The lineal descendants, in infinitum, of any person deceased shall represent their ancestor; that is, shall stand in the same place as the person himself would have done, had he been living.

5th, On failure of lineal descendants, or issue, of the person last seized, the inheritance shall descend to the blood of the first purchaser; subject to the three preceding rules. To evidence which blood, the two following rules are established.

6th, The collateral heir of the person last seized must be his next collateral kinsman, of the whole blood.

7th, In collateral inheritances, the male stocks shall be preferred to the female; that is, kindred derived from the blood of the male ancestors shall be admitted before those from the blood of the female: unless where the lands have, in fact, descended from a female.

SECT. XV. *Of title by purchase, and first by escheat.*

(1.) PURCHASE, or perquisition, is the possession of an estate which a man hath by his own act or agreement; and not by the mere act of law, or descent from any of his ancestors. This includes, 1. Escheat. 2. Occupancy. 3. Prescription. 4. Forfeiture. 5. Alienation.

(2.) Escheat is where, upon deficiency of the tenant's inheritable blood, the estate falls to the lord of the fee.

(3.) Inheritable blood is wanting to, 1. Such as are not related to the person last seized. 2. His maternal relations in paternal inheritances, and vice versa. 3. His kindred of the half blood. 4. Monsters. 5. Bastards. 6. Aliens, and their issue. 7. Persons attainted of treason or felony. 8. Papists, in respect of themselves only, by the statute law.

SECT. XVI. *Of title by occupancy.*

viii.

(1.) OCCUPANCY is the taking possession of those things which before had no owner.

(2.) Thus, at the common law, where tenant *pur auter vie* died during the life of *cestuy que vie*, he, who could first enter, might lawfully retain the possession; unless by the original grant the heir was made a special occupant.

(3.) The law of derelictions and alluvions has narrowed the title by occupancy.

SECT. XVII. *Of title by prescription.*

xix.

(1.) PRESCRIPTION (as distinguished from custom) is a personal immemorial usage of enjoying a right in some incorporeal hereditament, by a man, and either his ancestors or those whose estate of inheritance he hath: of which the first is called *prescribing in his ancestors*, the latter in a *que estate*.

parties: being usually a writing sealed and delivered; and it may be, 1. A deed indented, or indenture. 2. A deed poll.

(3.) The *requisites* of a deed are, 1. Sufficient parties, and proper *subject-matter*. 2. A good and sufficient *consideration*. 3. *Writing* on paper, or parchment, duly stamped. 4. Legal and orderly *parts*: (which are usually, 1st, the premises; 2dly, the *habendum*; 3dly, the *tenendum*; 4thly, the *reddendum*; 5thly, the conditions; 6thly, the warranty, which is either lineal or collateral; 7thly, the covenants; 8thly, the conclusion, which includes the date). 5. *Reading* it, if desired. 6. *Sealing*, and, in many cases, *signing* it also. 7. *Delivery*. 8. *Attestation*.

(4.) A deed may be *avoided*, 1. By the want of any of the requisites before-mentioned. 2. By subsequent matter; as, 1st, Rasure, or alteration. 2dly, Defacing its seal. 3dly, Cancelling it. 4thly, Disagreement of those whose consent is necessary. 5thly, Judgment of a court of justice.

(5.) Of the several *species* of deeds, some serve to convey real property, some only to *charge* and *discharge* it.

(6.) Deeds which serve to convey real property, or conveyances, are either by *common law*, or by *statute*. And, of conveyances by *common law*, some are *original* or primary, others *derivative* or secondary.

(7.) *Original* conveyances are, 1. *Feoffments*. 2. *Gifts*. 3. *Grants*. 4. *Leases*. 5. *Exchanges*. 6. *Partitions*. *Derivative* are, 7. *Releases*. 8. *Confirmations*. 9. *Surrenders*. 10. *Assignments*. 11. *Defeasances*.

(8.) A *feoffment* is the transfer of any *corporeal* hereditament to another, perfected by *livery of seisin*, or delivery of bodily possession from the feoffer to the feoffee; without which no freehold estate therein can be created at common law.

(9.) A *gift* is properly the conveyance of lands in tail.

(10.) A *grant* is the regular method, by common law, of conveying *incorporeal* hereditaments.

(11.) A *lease* is the demise, granting, or letting to farm of any tenement, usually for a less term than the lessor hath therein; yet sometimes possibly for a greater; according to the regulations of the restraining and enabling statutes.

(12.) An *exchange* is the mutual conveyance of equal interests, the one in consideration of the other.

(13.) A *partition* is the division of an estate held in joint-tenancy, in coparcenary, or in common, between the respective tenants; so that each may hold his distinct part in severalty.

(14.) A *release* is the discharge or conveyance of a man's right, in lands and tenements, to another that hath some former estate in possession therein.

(15.) A *confirmation* is the conveyance of an estate or right *in esse*, whereby a voidable estate is made sure, or a particular estate is increased.

(16.) A *surrender* is the yielding up of an estate for life, or years, to him that hath the immediate remainder or reversion; wherein the particular estate may merge.

(17.) An *assignment* is the transfer, or making over to another, of the whole right one has in any estate; but usually in a lease, for life or years.

(18.) A *defeasance* is a collateral deed, made at the same time with the original conveyance; contain-

ing some condition, upon which the estate may be defeated.

(19.) Conveyances by *statute* depend much on the doctrine of *uses* and *trusts*: which are a confidence reposed in the *terre tenant*, or tenant of the land, that he shall permit the profits to be enjoyed, according to the directions of *cessuy que use*, or *cessuy que trust*.

(20.) The statute of uses, having transferred all uses into actual possession, (or, rather, having drawn the possession to the use), has given birth to divers other species of conveyance: 1. A *covenant* to stand seized to use. 2. A *bargain and sale*, enrolled. 3. A *lease and release*. 4. A deed to *lead* or *declare* the use of other more direct conveyances. 5. A *revocation of uses*; being the execution of a power, reserved at the creation of the use, of recalling at a future time the use or estate so creating. All which owe their present operation principally to the statute of uses.

(21.) Deeds which do not convey, but only charge real property, and discharge it, are, 1. *Obligations*. 2. *Recognizances*. 3. *Defeasances* upon both.

### SECT. XXI. Of alienation by matter of record.

lxxxii

(1.) ASSURANCES by matter of record are where the sanction of some court of record is called in, to substantiate and witness the transfer of real property. These are, 1. *Private acts of parliament*. 2. *The king's grants*. 3. *Fines*. 4. *Common recoveries*.

(2.) *Private acts of parliament* are a species of assurances, calculated to give (by the transcendent authority of parliament) such reasonable powers or relief as are beyond the reach of the ordinary course of law.

(3.) The *king's grants*, contained in charters or letters patent, are all entered on record, for the dignity of the royal person, and security of the royal revenue.

(4.) A *fine* (sometimes said to be a feoffment of record) is an amicable composition and agreement of an actual, or fictitious, suit; whereby the estate in question is acknowledged to be the right of one of the parties.

(5.) The *parts* of a fine are, 1. The writ of covenant. 2. The licence to agree. 3. The concord. 4. The note. 5. The foot. To which the statute hath added, 6. Proclamations.

(6.) Fines are of four *kinds*: 1. *Sur cognizance de droit, come ceo que il'ad de son done*. 2. *Sur cognizance de droit tantum*. 3. *Sur concessit*. 4. *Sur done, grant, et render*; which is a double fine.

(7.) The *force* and *effect* of fines (when levied by such as have themselves any interest in the estate) are to assure the lands in question to the cognizee, by barring the respective rights of parties, privies, and strangers.

(8.) A *common recovery* is by an actual, or fictitious, suit or action for land, brought against the tenant of the freehold; who thereupon vouches another, who undertakes to warrant the tenant's title: but, upon such vouchee's making default, the land is recovered by judgment at law against the tenant; who, in return, obtains judgment against the vouchee to recover lands of equal value in recompense.

(9.) The *force* and *effect* of a recovery are to assure

lands to the recoverer, by barring estates tail, and all remainders and reversions expectant thereon; provided the tenant in tail either suffers, or is vouched in, such recovery.

(10.) The *uses* of a fine or recovery may be directed by, 1. Deeds to *lead* such uses; which are made previous to the levying or suffering them. 2. Deeds to *declare* the uses; which are made subsequent.

#### SECT. XXII. *Of alienation by special custom.*

(1.) ASSURANCES by special *custom* are confined to the transfer of *copyhold* estates.

(2.) This is effected by, 1. *Surrender* by the tenant into the hands of the lord to the use of another, according to the custom of the manor. 2. *Presentment*, by the tenants or homage, of such surrender. 3. *Admittance* of the surrenderee by the lord, according to the uses expressed in such surrender.

(3.) *Admittance* may also be had upon original grants to the tenant from the lord, and upon *descents* to the heir from the ancestor.

#### SECT. XXIII. *Of alienation by devise.*

(1.) DEVISE is a disposition of lands and tenements, contained in the last will and testament of the owner.

(2.) This was not permitted by the common law, as it stood since the conquest; but was introduced by the statute law, under Henry VIII. since made more universal by the statute of tenures under Charles II. with the introduction of additional solemnities by the statute of frauds and perjuries in the same reign.

(3.) The *construction* of all common assurances should be, 1. Agreeable to the intention. 2. To the words of the parties. 3. Made upon the entire deed. 4. Bearing strongest against the contractor. 5. Conformable to law. 6. Rejecting the latter of two totally repugnant clauses in a deed, and the former in a will. 7. Most favourable in case of a devise.

#### SECT. XXIV. *Of things personal.*

(1.) THINGS *personal* are comprehended under the general name of *chattels*; which includes whatever wants either the duration, or the immobility, attending things real.

(2.) In these are to be considered, 1. Their *distribution*. 2. The *property* of them. 3. The *title* to that property.

(3.) As to the *distribution* of chattels, they are, 1. *Chattels real*. 2. *Chattels personal*.

(4.) *Chattels real* are such quantities of interest, in things *immovable*, as are short of the duration of freeholds; being limited to a time certain, beyond which they cannot subsist. (See Sect. 7.)

(5.) *Chattels personal* are things *moveable*; which may be transferred from place to place, together with the person of the owner.

#### SECT. XXV. *Of property in things personal.*

(1.) PROPERTY, in chattels personal, is either in *possession*, or in *action*.

(2.) Property in *possession*, where a man has the actual enjoyment of the thing, is, 1. *Absolute*. 2. *Qualified*.

(3.) *Absolute* property is where a man has such an exclusive right in the thing, that it cannot cease to be his, without his own act or default.

(4.) *Qualified* property is such as is not, in its nature, permanent; but may sometimes subsist, and at other times not subsist.

(5.) This may arise, 1. Where the subject is incapable of absolute ownership. 2. From the peculiar circumstances of the owners.

(6.) Property in *action*, is where a man hath not the actual *occupation* of the thing; but only a *right* to it, arising upon some contract, and recoverable by an action at law.

(7.) The property of chattels personal is liable to remainders, expectant on estates for life; to joint-tenancy; and to tenancy in common.

#### SECT. XXVI. *Of title to things personal by occupancy.*

lxxxvii,

(1.) THE *title* to things personal may be acquired or lost by, 1. *Occupancy*. 2. *Prerogative*. 3. *Forfeiture*. 4. *Custom*. 5. *Succession*. 6. *Marriage*. 7. *Judgment*. 8. *Gift*, or *grant*. 9. *Contract*. 10. *Bankruptcy*. 11. *Testament*. 12. *Administration*.

(2.) *Occupancy* still gives the full occupant a right to those few things which have no legal owner, or which are incapable of permanent ownership. Such as, 1. Goods of alien enemies. 2. Things found. 3. The benefit of the elements. 4. Animals *feræ naturæ*. 5. Emblements. 6. Things gained by accession; or, 7. By confusion. 8. Literary property.

#### SECT. XXVII. *Of title by prerogative, and forfeiture.*

lxxxix,

(1.) By *prerogative* is vested in the crown, or its grantees, the property of the royal revenue, (see Chap. I. Sect. 8.); and also the property of all game in the kingdom, with the right of pursuing and taking it.

(2.) By *forfeiture*, for crimes and misdemeanors, the right of goods and chattels may be transferred from one man to another; either in part or totally.

(3.) Total forfeitures of goods arise from conviction of, 1. Treason, and misprison thereof. 2. Felony. 3. Excusable homicide. 4. Outlawry for treason or felony. 5. Flight. 6. Standing mute. 7. Assaults on a judge; and batteries, sitting the courts. 8. *Præmunire*. 9. Pretended prophecies. 10. Owling. 11. Residing abroad of artificers. 12. Challenges to fight, for debts at play.

#### SECT. XXVIII. *Of title by custom*

lxxx

(1.) By *custom*, obtaining in particular places, a right may be acquired in chattels: the most usual of which customs are those relating to, 1. *Heriots*. 2. *Mortuaries*. 3. *Heir looms*.

(2.) *Heriots* are either *heriot-service*, which differs little from a rent; or *heriot custom*, which is a customary tribute, of goods and chattels, payable to the lord of the fee on the decease of the owner of lands.

(3.) *Mortuaries* are a customary gift, due to the minister in many parishes, on the death of his parishioners.

(4.)

(4.) *Heir-looms* are such personal chattels, as descend by special custom to the heir, along with the inheritance of his ancestor.

xc. SECT. XXIX. *Of title by succession, marriage, and judgment.*

(1.) BY *succession* the right of chattels is vested in corporations *aggregate*; and likewise in such corporations *sole* as are the heads and representatives of bodies *aggregate*.

(2.) By *marriage* the chattels real and personal of the wife are vested in the husband, in the same degree of property, and with the same powers, as the wife when *sole* had over them; provided he reduces them to possession.

(3.) The wife also acquires, by *marriage*, a property in her own *paraphernalia*.

(4.) By *judgment*, consequent on a suit at law, a man may in some cases, not only *recover*, but originally *acquire*, a right to personal property. As, 1. To penalties recoverable by action popular. 2. To damages. 3. To costs of suit.

xcii. SECT. XXX. *Of title by gift, grant, and contract.*

(1.) A *gift*, or *grant*, is a voluntary conveyance of a chattel personal in possession, without any consideration or equivalent.

(2.) A *contract* is an agreement, upon sufficient consideration, to do or not to do a particular thing: and, by such contract, any personal property (either in possession or in action) may be transferred.

(3.) Contracts may either be express or implied; either executed or executory.

(4.) The *consideration* of contracts is, 1. A good consideration. 2. A valuable consideration; which is, 1. *Do, ut des.* 2. *Facio, ut facias.* 3. *Facio, ut des.* 4. *Do, ut facias.*

(5.) The most usual *species* of personal contracts are, 1. *Sale* or *exchange.* 2. *Bailment.* 3. *Hiring* or *borrowing.* 4. *Debt.*

(6.) *Sale* or *exchange* is a transmutation of property from one man to another, in consideration of some recompense in value.

(7.) *Bailment* is the delivery of goods in trust; upon a contract, express or implied, that the trust shall be faithfully performed by the bailee.

(8.) *Hiring* or *borrowing* is a contract, whereby the possession of chattels is transferred for a particular time, on condition that the identical goods (or sometimes their value) be restored at the time appointed: together with (in case of *hiring*) a stipend or price for the use.

(9.) This price, being calculated to answer the hazard as well as inconvenience of lending, gives birth to the doctrine of *interest*, or *usury*, upon loans; and, consequently, to the doctrine of *bottomry* or *respondentia*, and *insurance*.

(10.) *Debt* is any contract, whereby a certain sum of money becomes due to the creditor. This is, 1. A debt of *record.* 2. A debt upon *special* contract. 3. A debt upon *simple* contract; which last includes paper credit, or bills of exchange, and promissory notes.

N<sup>o</sup> 176.

SECT. XXXI. *Of title by bankruptcy.*

(1.) BANKRUPTCY (as defined in Sect. 18.) is the act of becoming a bankrupt.

(2.) Herein may be considered, 1. Who may become a bankrupt. 2. The *acts* whereby he may become a bankrupt. 3. The *proceedings* on a commission of bankrupt. 4. How his *property* is transferred thereby.

(3.) Persons of full age, *using* the trade of merchandize, by buying, and selling, and seeking their livelihood thereby, are liable to become bankrupts; for debts of a sufficient amount.

(4.) A trader, who endeavours to avoid his creditors, or evade their just demands, by any of the ways specified in the several statutes of bankruptcy, doth thereby commit an *act* of bankruptcy.

(5.) The *proceedings* on a commission of bankrupt, so far as they affect the bankrupt himself, are principally by, 1. Petition. 2. Commission. 3. Declaration of bankruptcy. 4. Choice of assignees. 5. The bankrupt's surrender. 6. His examination. 7. His discovery. 8. His certificate. 9. His allowance. 10. His indemnity.

(6.) The *property* of a bankrupt's personal estate is, immediately upon the act of bankruptcy, vested by construction of law in the assignees: and they, when they have collected, distribute the whole by equal dividends among all the creditors.

SECT. XXXII. *Of title by testament, and administration.*

(1.) CONCERNING *testaments* and *administrations*, considered jointly, are to be observed, 1. Their *original* and *antiquity.* 2. *Who* may make a testament. 3. Its *nature* and *incidents.* 4. What are *executors* and *administrators.* 5. Their *office* and *duty.*

(2.) *Testaments* have subsisted in England immemorially; whereby the deceased was at liberty to dispose of his personal estate, reserving anciently to his wife and children their *reasonable part* of his effects.

(3.) The goods of *intestates* belonged anciently to the king; who granted them to the prelates to be disposed in pious uses: but, on their abuse of this trust in the times of popery, the legislature compelled them to delegate their power to *administrators* expressly provided by law.

(4.) *All* persons may make a testament unless disabled by, 1. Want of discretion. 2. Want of free-will. 3. Criminal conduct.

(5.) *Testaments* are the legal declaration of a man's intentions, which he wills to be performed after his death. These are, 1. Written. 2. Nuncupative.

(6.) An *executor* is he, to whom a man by his will commits the execution thereof.

(7.) *Administrators* are, 1. *Durante minore etate* of an infant executor or administrator; or *durante absentia*; or *pendente lite.* 2. *Cum testamento unnesso*; when no executor is named, or the executor refuses to act. 3. General administrators; in pursuance of the statutes of Edward III. and Henry VIII. 4. Administrators *de bonis non*; when a former executor or administrator dies without completing his trust.

(8.)

(8.) The office and duty of executors (and, in many points, of administrators also), are, 1. To bury the deceased. 2. To prove the will, or take out administration. 3. To make an inventory. 4. To collect the goods and chattels. 5. To pay debts; observing the rules of priority. 6. To pay legacies, either general or specific; if they be vested, and not lapsed. 7. To distribute the undivided surplus, according to the statute of distributions.

### CHAPTER III.

#### OF PRIVATE WRONGS.

SECT. I. *Of the redress of private wrongs, by the mere act of the parties.*

(1.) **WRONGS** are the privation of right; and are, 1. *Private.* 2. *Public.*

(2.) *Private wrongs, or civil injuries,* are an infringement, or privation, of the civil rights of individuals, considered as individuals.

(3.) The redress of civil injuries is one principal object of the laws of England.

(4.) This redress is effected, 1. By the mere act of the parties. 2. By the mere operation of law. 3. By both together, or *suit in courts.*

(5.) Redress, by the mere act of the parties, is that which arises, 1. From the *sole* act of the party injured. 2. From the *joint* act of all the parties.

(6.) Of the first sort are, 1. Defence of one's self, or relations. 2. Recaption of goods. 3. Entry on lands and tenements. 4. Abatement of nuisances. 5. Distresses; for rent, for suit or service, for amercements, for damage, or for divers statutable penalties;—made of such things only as are legally distrainable;—and taken and disposed of according to the due course of law. 6. Seizing of heriots, &c.

(7.) Of the second sort are, 1. Accord. 2. Arbitration.

SECT. II. *Of redress by the mere operation of law.*

REPRESS, effected by the mere operation of law, is, 1. In the case of *retainer*; where a creditor is executor or administrator, and is thereupon allowed to retain his own debt. 2. In the case of *remitter*; where one, who has a good title to lands, &c. comes into possession by a *bad* one, and is thereupon remitted to his ancient good title, which protects his ill-acquired possession.

#### SECT. III. *Of courts in general.*

(1.) REPRESS, that is effected by the act both of law and of the parties, is by *suit or action* in the courts of justice.

(2.) Herein may be considered, 1. The courts themselves. 2. The cognizance of wrongs or injuries therein. And, of courts, 1. Their *natures* and *incidents*. 2. Their *several species*.

(3.) A court is a place wherein justice is judicially administered, by officers delegated by the crown; being a court either of record, or not of record.

(4.) Incident to all courts are a plaintiff, defendant, and judge: and, with us, there are also usually attor-

neys; and advocates or counsel, *viz.* either barristers or serjeants at law.

SECT. IV. *Of the public courts of common law and equity.*

(1.) COURTS of justice, with regard to their several species, are, 1. Of a *public*, or general, jurisdiction throughout the realm. 2. Of a *private*, or special, jurisdiction.

(2.) *Public* courts of justice are, 1. The courts of *common law* and *equity*. 2. The *ecclesiastical* courts. 3. The *military* courts. 4. The *maritime* courts.

(3.) The general and public courts of *common law* and *equity* are, 1. The court of piepoudre. 2. The court-baron. 3. The hundred court. 4. The county court. 5. The court of common pleas. 6. The court of king's bench. 7. The court of exchequer. 8. The court of chancery. (Which two last are courts of *equity* as well as *law*). 9. The courts of exchequer-chamber. 10. The house of peers. To which may be added, as auxiliaries, 11. The courts of assize and *nisi prius*.

SECT. V. *Of courts ecclesiastical, military, and maritime.*

(1.) ECCLESIASTICAL courts (which were separated from the *temporal* by William the Conqueror), or courts *Christian*, are, 1. The court of the archdeacon. 2. The court of the bishop's consistory. 3. The court of arches. 4. The court of peculiars. 5. The prerogative court. 6. The court of delegates. 7. The court of review.

(2.) The only permanent *military* court is that of chivalry; the courts martial, annually established by act of parliament, being only temporary.

(3.) *Maritime* courts are, 1. The court of admiralty and vice admiralty. 2. The court of delegates. 3. The lords of the privy council, and others, authorized by the king's commission, for appeals in prizes.

SECT. VI. *Of courts of a special jurisdiction.*

COURTS of a special or private jurisdiction are, 1. The forest courts; including the courts of attachments, regard, swienmote, and justice seat. 2. The court of commissioners of sewers. 3. The court of policies of assurance. 4. The court of the marshalsea and the palace court. 5. The courts of the principality of Wales. 6. The court of the duchy chamber of Lancaster. 7. The courts of the counties palatine, and other royal franchises. 8. The stannery courts. 9. The courts of London, and other corporations:—To which may be referred the courts of requests or courts of conscience; and the modern regulations of certain courts baron and county courts. 10. The courts of the two universities.

SECT. VII. *Of the cognizance of private wrongs.*

(1.) ALL private wrongs or civil injuries are cognizable either in the courts *ecclesiastical, military, maritime,* or those of *common law*.

(2.) Injuries cognisable in the *ecclesiastical* courts are, 1. *Pecuniary*. 2. *Matrimonial*. 3. *Testamentary*.

(3.) *Pecuniary* injuries, here cognisable, are, 1. *Subtraction of tithes*. For which the remedy is by suit to compel their payment, or an equivalent; and also their double value. 2. *Nonpayment of ecclesiastical dues*. Remedy: by suit for payment. 3. *Spoilation*. Remedy: by suit for restitution. 4. *Dilapidations*. Remedy: by suit for damages. 5. *Non-repair of the church, &c.*; and *non-payment of church-rates*. Remedy: by suit to compel them.

(4.) *Matrimonial* injuries are, 1. *Facilitation of marriage*. Remedy: by suit for perpetual silence. 2. *Subtraction of conjugal rights*. Remedy: by suit for restitution. 3. *Inability for the marriage state*. Remedy: by suit for divorce. 4. *Refusal of decent maintenance to the wife*. Remedy: by suit for alimony.

(5.) *Testamentary* injuries are, 1. *Disputing the validity of wills*. Remedy: by suit to establish them. 2. *Obstruſting of adminiſtrations*. Remedy: by suit for the granting them. 3. *Subtraction of legacies*. Remedy: by suit for the payment.

(6.) The course of proceedings herein is much conformed to the civil and canon law: but their only compulsory process is that of excommunication; which is enforced by the temporal writ of *ſignificavit*, or *de excommunicato capiendo*.

(7.) Civil injuries, cognisable in the court *military*, or court of chivalry, are, 1. Injuries in point of *honour*. Remedy: by suit for honourable amends. 2. *Encroachments in coat-armour, &c.* Remedy: by suit to remove them. The proceedings are in a summary method.

(8.) Civil injuries cognisable in the courts *maritime*, are injuries, in their nature of common-law cognisance, but arising wholly upon the sea, and not within the precincts of any county. The proceedings are herein also much conformed to the civil law.

(9.) All other injuries are cognisable only in the courts of *common law*: of which in the remainder of this chapter.

(10.) Two of them are, however, commiſſible by these and other inferior courts; *viz.* 1. *Refusal, or neglect, of justice*. Remedies: by writ of *procedendo*, or *mandamus*. 2. *Encroachment of jurisdiction*. Remedy: by writ of prohibition.

#### SECT. VIII. Of wrongs, and their remedies, respecting the rights of persons.

(1.) In treating of the cognisance of injuries by the courts of *common law*, may be considered, 1. The injuries themselves, and their respective remedies. 2. The pursuit of those remedies in the several courts.

(2.) Injuries between subject and subject, cognisable by the courts of *common law*, are in general remedied by putting the party injured into possession of that right whereof he is unjustly deprived.

(3.) This is effected, 1. By *delivery* of the thing detained to the rightful owner. 2. Where that remedy is either impossible or inadequate, by giving the party injured a *satisfaction in damages*.

(4.) The instruments, by which these remedies may be obtained, are *suits* or *actions*; which are defined to

be the legal demand of one's right; and these are, 1. *Personal*. 2. *Real*. 3. *Mixed*.

(5.) Injuries (whereof some are with, others without, force) are, 1. Injuries to the rights of *persons*. 2. Injuries to the rights of *property*. And the former are, 1. Injuries to the *absolute*. 2. Injuries to the *relative*, rights of persons.

(6.) The *absolute* rights of individuals are, 1. *Personal security*. 2. *Personal liberty*. 3. *Private property*: (See Chap. I. Sect. 1.) To which the injuries must be correspondent.

(7.) Injuries to *personal security* are, 1. Against a man's *life*. 2. Against his *limbs*. 3. Against his *body*. 4. Against his *health*. 5. Against his *reputation*.—The first must be referred to the next chapter.

(8.) Injuries to the *limbs* and *body*, are, 1. *Threats*. 2. *Affault*. 3. *Battery*. 4. *Wounding*. 5. *Mayhem*. Remedy: by action of trespass, *vi et armis*; for damages.

(9.) Injuries to *health*, by any unwholesome practices, are remedied by a special action of trespass, on the case; for damages.

(10.) Injuries to *reputation* are, 1. *Slandorous and malicious words*. Remedy: by action on the case; for damages. 2. *Libels*. Remedy: the same. 3. *Malicious prosecutions*. Remedy: by action of conspiracy, or on the case; for damages.

(11.) The sole injury to *personal liberty* is *false imprisonment*. Remedies: 1. By writ of, 1st, *Mainprize*; 2dly, *Odio et atia*; 3dly, *Homine replegiando*. 4thly, *Habeas corpus*; to remove the wrong. 2. By action of trespass; to recover damages.

(12.) For injuries to *private property*, see the next section.

(13.) Injuries to *relative* rights affect, 1. *Husbands*. 2. *Parents*. 3. *Guardians*. 4. *Masters*.

(14.) Injuries to an *husband* are, 1. *Abduction*, or taking away his wife. Remedy: by action of trespass, *de uxore rapta et abducta*; to recover possession of his wife, and damages. 2. *Criminal conversation* with her. Remedy: by action on the case; for damages. 3. *Beating* her. Remedy: by action on the case, *per quod consortium amittit*; for damages.

(15.) The only injury to a *parent* or *guardian* is the *abduction* of their children or wards. Remedy: by action of trespass, *de filiis, vel custodiis, raptis vel abductis*; to recover possession of them, and damages.

(16.) Injuries to a *master* are, 1. *Retaining* his servants. Remedy: by action on the case; for damages. 2. *Beating* them. Remedy: by action on the case, *per quod servitium amittit*; for damages.

#### SECT. IX. Of injuries to personal property.

(1.) INJURIES to the rights of *property* are either to those of *personal* or *real* property.

(2.) *Personal* property is either in *possession* or in *action*.

(3.) Injuries to *personal property* in possession are, 1. By *dispossession*. 2. By *damage*, while the owner remains in possession.

(4.) *Dispossession* may be effected, 1. By an unlawful *taking*. 2. By an unlawful *detaining*.

(5.) For the unlawful *taking* of goods and chattels *personal*,

personal, the remedy is, 1. Actual restitution, which (in case of a wrongful distress) is obtained by action of replevin. 3. Satisfaction in damages: 1st, in case of *rescous*, by action of *rescous*, poundbreach, or on the case; 2dly, in case of other unlawful takings, by action of trespass or trover.

(6.) For the unlawful *detaining* of goods lawfully taken, the remedy is also, 1. Actual restitution; by action of replevin or detinue. 2. Satisfaction in damages: by action on the case, for trover and conversion.

(7.) For *damage* to personal property, while in the owner's possession, the remedy is in damages; by action of trespass *vi et armis*, in case the act be immediately injurious; or by action of trespass on the case, to redress consequential damage.

(8.) Injuries to personal property, in *action*, arise by breach of *contracts*, 1. *Express*. 2. *Implied*.

(9.) Breaches of *express* contracts are, 1. By *nonpayment of debts*. Remedy: 1st, Specific payment; recoverable by action of debt. 2dly, Damages for nonpayment; recoverable by action on the case. 2. By *nonperformance of covenants*. Remedy: by action of covenant, 1st, to recover damages, in covenants personal; 2dly, to compel performance, in covenants real. 3. By *nonperformance of promises, or assumpsits*. Remedy: by action on the case; for damages.

(10.) *Implied* contracts are such as arise, 1. From the nature and constitution of *government*. 2. From *reason* and the construction of law.

(11.) Breaches of contracts, implied in the nature of *government*, are by the *nonpayment* of money which the laws have directed to be paid. Remedy: by action of debt (which, in such cases, is frequently a *popular*, frequently a *qui tam*, action); to compel the specific payment;—or, sometimes, by action on the case; for damages.

(12.) Breaches of contracts, implied in *reason* and construction of law, are by the *nonperformance* of legal presumptive *assumpsits*: for which the remedy is in damages; by an action on the case on the implied *assumpsits*, 1. Of a *quantum meruit*. 2. Of a *quantum valebat*. 3. Of money expended for another. 4. Of receiving money to another's use. 5. Of an *infirmul computassit*, on an account stated (the remedy on an account unstated being by action of account). 6. Of performing one's duty, in any employment, with integrity, diligence, and skill. In some of which cases an action of deceit (or on the case, in nature of deceit) will lie.

#### SECT. X. Of injuries to real property; and, first, of dispossession, or ouster, of the freehold.

(1.) INJURIES affecting real property are, 1. *Ouster*. 2. *Trespass*. 3. *Nuisance*. 4. *Waste*. 5. *Subtraction*. 6. *Disturbance*.

(2.) *Ouster* is the amotion of possession; and is, 1. From *freeholds*. 2. From *chattels* real.

(3.) Ouster from *freeholds* is effected by, 1. *Abatement*. 2. *Intrusion*. 3. *Dissaisin*. 4. *Discontinuance*. 5. *Deforcement*.

(4.) *Abatement* is the entry of a stranger, after the death of the ancestor, before the heir.

(5.) *Intrusion* is the entry of a stranger, after a par-

ticular estate of freehold is determined, before him in remainder or reversion.

(6.) *Dissaisin* is a wrongful putting out of him that is seized of the freehold.

(7.) *Discontinuance* is where tenant in tail, or the husband of tenant in fee, makes a larger estate of the land than the law alloweth.

(8.) *Deforcement* is any other detainer of the freehold from him who hath the property, but who never had the possession.

(9.) The universal remedy for all these is restitution or delivery of possession; and, sometimes, damages for the detention. This is effected, 1. By mere *entry*. 2. By action *possessory*. 3. By writ of *right*.

(10.) Mere *entry*, on lauds, by him who hath the apparent right of possession, will (if *peaceable*) divest the mere *possession* of a wrongdoer. But *forcible* entries are remedied by immediate restitution, to be given by a justice of the peace.

(11.) Where the wrongdoer hath not only mere possession, but also an *apparent* right of possession, this may be devolved by him who hath the *actual* right of possession, by means of the *possessory* actions of *writ of entry* or *assise*.

(12.) A writ of *entry* is a real action, which disproves the title of the tenant, by showing the unlawful means under which he gained or continues possession. And it may be brought either against the wrongdoer himself, or in the degrees called the *per*, the *per* and *cui*, and the *post*.

(13.) An *assise* is a real action, which proves the title of the demandant, by showing his own or his ancestor's possession. And it may be brought either to remedy abatements; viz. the assise of *mort d'ancestor*, &c.: Or to remedy recent dissaisins; viz. the assise of *novel dissaisin*.

(14.) Where the wrongdoer hath gained the actual right of *possession*, he who hath the right of *property* can only be remedied by a writ of *right*, or some writ of a similar nature. As, 1. Where such right of possession is gained by the *discontinuance* of tenant in tail. Remedy, for the right of property: by writ of *formedon*. 2. Where gained by *recovery* in a possessory action, had against tenants of particular estates by their own default. Remedy: by writ of *quod ei deforceat*. 3. Where gained by *recovery* in a possessory action, had upon the merits. 4. Where gained by the *statute of limitations*. Remedy, in both cases: by a mere writ of *right*, the highest writ in the law.

#### SECT. XI. Of dispossession, or ouster, of chattels real.

(1.) OUSTER from *chattels* real is, 1. From estates by *statute* and *elegit*. 2. From an estate for *years*.

(2.) Ouster from estates by *statute* or *elegit*, is effected by a kind of *dissaisin*. Remedy: restitution and damages; by assise of *novel dissaisin*.

(3.) Ouster from an estate for years, is effected by a like dissaisin, or *ejectment*. Remedy: restitution, and damages; 1. By writ of *ejectione firmæ*. 2. By writ of *quare ejecit infra terminum*.

(4.) A writ of *ejectione firmæ*, or action of trespass in ejectment, lieth where lands, &c. are let for a term of years, and the lessee is ousted or ejected from his

Law of  
England,  
epitomised.

term; in which case he shall recover possession of his term, and damages.

(5.) This is now the usual method of trying titles to land, instead of an action real: viz. By, 1. The claimant's making an actual (or supposed) lease upon the land to the plaintiff. 2. The plaintiff's actual (or supposed) entry thereupon. 3. His actual (or supposed) ouster and ejection by the defendant. For which injury this action is brought either against the tenant, or (more usually) against some casual or fictitious ejector; in whose stead the tenant may be admitted defendant, on condition that the lease, entry, and ouster, be confessed, and that nothing else be disputed but the merits of the title claimed by the lessor of the plaintiff.

(6.) A writ of *quare ejecit infra terminum* is an action of a similar nature; only not brought against the wrongdoer or ejector himself, but such as are in possession under his title.

to another, withdraws or neglects to perform them. This may be, 1. Of rents, and other services, due by tenure. 2. Of those due by custom.

(2.) For subtraction of rents and services, due by tenure, the remedy is, 1. By distress; to compel the payment or performance. 2. By action of debt. 3. By assize. 4. By writ *de consuetudinibus et servitiis*;—to compel the payment. 5. By writ of *cessavit*;—and, 6. By writ of right *sur disclaimer*;—to recover the land itself.

(3.) To remedy the oppression of the lord, the law has also given, 1. The writ of *Ne injuste vexes*: 2. The writ of *mesne*.

(4.) For subtraction of services, due by custom, the remedy is. 1. By writ of *Secda ad molendinum, furuum, torrale*, &c. to compel the performance, and recover damages. 2. By action on the case; for damages only.

Law of  
England  
epitomi

6vi.

### SECT. XII. Of trespass.

TRESPASS is an entry upon, and damage done to, another's lands, by one's self, or one's cattle; without any lawful authority, or cause of justification: which is called a *breach of his clofs*. Remedy: damages; by action of trespass, *quare clausum fregit*: besides that of distress, damage feasant. But, unless the title to the land came chiefly in question, or the trespass was wilful or malicious, the plaintiff (if the damages be under forty shillings) shall recover no more costs than damages.

6vii.

### SECT. XIII. Of nuisance.

(1.) NUISANCE, or annoyance, is any thing that worketh damage or inconvenience: and it is either a *public* and *common* nuisance, of which in the next chapter; or, a *private* nuisance, which is any thing done to the hurt or annoyance of, 1. The corporeal; 2. The incorporeal, hereditaments of another.

(2.) The remedies for a private nuisance (besides that of abatement) are. 1. Damages; by action on the case; (which also lies for special prejudice by a public nuisance). 2. Removal thereof, and damages; by assize of nuisance. 3. Like removal, and damages; by writ of *Quod permittat prosternere*.

6viii.

### SECT. XIV. Of waste.

(1.) WASTE is a spoil and destruction in lands and tenements, to the injury of him who hath, 1. An immediate interest (as, by right of common) in the lands. 2. The remainder or reversion of the inheritance.

(2.) The remedies, for a commoner, are restitution, and damages; by assize of common: Or, damages only; by action on the case.

(3.) The remedy, for him in remainder, or reversion, is, 1. Preventive; by writ of *estrepement* at law, or injunction out of chancery; to stay waste. 2. Corrective: by action of waste; to recover the place wasted, and damages.

6ix.

### SECT. XV. Of subtraction.

(1.) SUBTRACTION is when one, who owes services

### SECT. XVI. Of disturbance.

(1.) DISTURBANCE is the hindering, or disquieting, the owners of an incorporeal hereditament, in their regular and lawful enjoyment of it

(2.) Disturbances are, 1. Of *franchises*. 2. Of *commons*. 3. Of *ways*. 4. Of *tenure*. 5. Of *patronage*.

(3.) Disturbance of *franchises*, is remedied by a special action on the case; for damages.

(4.) Disturbance of *common*, is, 1. *Intercommoning* without right. Remedy: Damages; by an action on the case, or of trespass: besides distress, damage feasant; to compel satisfaction. 2. *Surcharging* the common. Remedies: distress, damage feasant; to compel satisfaction: Action on the case; for damages: or, Writ of admeasurement of pasture; to apportion the common; and writ *de secunda superoneratione*; for the supernumerary cattle, and damages. 3. *Inclosure*, or obstruction. Remedies: Restitution of the common, and damages; by assize of *novel disseisin*, and by writ of *quod permittat*: or, Damages only; by action on the case.

(5.) Disturbance of *ways*, is the obstruction, 1. Of a way in gross, by the owner of the land. 2. Of a way appendant, by a stranger. Remedy, for both: damages; by action on the case.

(6.) Disturbance of *tenure*, by driving away tenants, is remedied by a special action on the case; for damages.

(7.) Disturbance of *patronage*, is the hindrance of a patron to present his clerk to a benefice; whereof *usurpation*, within six months, is now become a species.

(8.) Disturbers may be, 1. The pseudo-patron, by his wrongful presentation. 2. His clerk, by demanding institution. 3. The ordinary, by refusing the clerk of the true patron.

(9.) The remedies are, 1. By assize of *darrein presentment*; 2. By writ of *quare impedit*;—to compel institution and recover damages: Consequent to which are the writs of *quare incumbavit*, and *quare non admittit*; for subsequent damages. 3. By writ of right of advowson; to compel institution, or establish the permanent right.

SECT.

of land, misfed.

SECT. XVII. *Of injuries proceeding from, or affecting, the crown.*

(1.) INJURIES to which the crown is a party are, 1. Where the crown is the aggressor. 2. Where the crown is the sufferer.

(2.) The crown is the aggressor, whenever it is in possession of any property to which the subject hath a right.

(3.) This is remedied, 1. By *petition of right*; where the right is grounded on facts disclosed in the petition itself. 2. By *monstrans de droit*; where the claim is grounded on facts, already appearing on record. The effect of both which is to remove the hands (or possession) of the king.

(4.) Where the crown is the sufferer, the king's remedies are, 1. By such common-law actions as are consistent with the royal dignity. 2. By *inquest of office*, to recover possession: which, when found, gives the king his right by solemn matter of record; but may afterwards be *traversed* by the subject. 3. By writ of *scire facias*, to repeal the king's patent or grant. 4. By *information of intrusion*, to give damages for any trespass on the lands of the crown; or of *debt*, to recover moneys due upon contract, or forfeited by the breach of any penal statute; or sometimes (in the latter case) by *information in rem*: all filed in the exchequer *ex officio* by the king's attorney-general. 5. By writ of *quo warranto*, or *information* in the nature of such writ; to seize into the king's hands any franchise usurped by the subject, or to oust an usurper from any public office. 6. By writ of *mandamus*, unless cause; to admit or restore any person intitled to a franchise or office: to which if a false cause be returned, the remedy is by *traverse*, or by action on the case for damages; and, in consequence, a peremptory *mandamus*, or writ of restitution.

SECT. XVIII. *Of the pursuit of remedies by action; and, first, of the original writ.*

(1.) THE *pursuit* of the several remedies furnished by the laws of England, is, 1. By *action* in the courts of common law. 2. By *proceedings* in the courts of equity.

(2.) Of an *action* in the court of common pleas (originally the proper court for prosecuting civil suits) the orderly parts are, 1. The *original writ*. 2. The *process*. 3. The *pleadings*. 4. The *issue*, or *demurrer*. 5. The *trial*. 6. The *judgment*. 7. The *proceedings* in nature of *appeal*. 8. The *execution*.

(3.) The *original writ* is the beginning or foundation of a suit, and is either *optional* (called a *præcipe*), commanding the defendant to do something in certain, or otherwise show cause to the contrary; or *peremptory* called a *fi fecerit te securum*), commanding, upon security given by the plaintiff, the defendant to appear in court, to show wherefore he hath injured the plaintiff: both issuing out of chancery under the king's great seal, and returnable in bank during term-time.

SECT. XIX. *Of process.*

(1.) PROCESS is the means of compelling the defendant to appear in court.

(2.) This includes, 1. *Summons*. 2. The writ of attachment, or *pone*; which is sometimes the first or original process. 3. The writ of *distingas*, or distress infinite. 4. The writs of *capias ad respondendum*, and *testatum capias*: or, instead of these, in the king's bench, the bill of Middlesex, and writ of *latitavit*:—and, in the exchequer, the writ of *quo minus*. 5. The *alias* and *pluries* writs. 6. The exigent, or writ of *exigi facias*, proclamations, and outlawry. 7. Appearance, and common bail. 8. The arrest. 9. Special bail, first to the sheriff, and then to the action.

SECT. XX. *Of pleadings.*

PLEADINGS are the mutual altercations of the plaintiff and defendant in writing; under which are comprised, 1. The declaration or count; (wherein, incidentally, of the *visne*, nonsuit, *retraxit*, and discontinuance). 2. The defence, claim of cognizance, impleurance, view,oyer, aid-prayer, voucher, or age; 3. The plea; which is either a *dilatory* plea (*1st*, to the jurisdiction; *2dly*, in disability of the plaintiff; *3dly*, in abatement), or it is a plea *to the action*; sometimes confessing the action either in whole or in part; (wherein of a tender, paying money into court, and set off): but usually denying the complaint, by pleading either, *1st*, the general issue; or, *2dly*, a special bar (wherein of justifications, the statutes of limitation, &c.). 4. Replication, rejoinder, surrejoinder, rebutter, surrebutter, &c. Therein of *edoppels*, colour, duplicity, departure, new assignment, prostration, averment, and other incidents of pleading.

SECT. XXI. *Of issue and demurrer.*

(1.) ISSUE is where the parties, in a course of pleading, come to a point affirmed on one side and denied on the other; which, if it be a matter of law, is called a *demurrer*; if it be a matter of fact, still retains the name of an issue, of fact.

(2.) *Continuance* is the detaining of the parties in court from time to time, by giving them a day certain to appear upon. And, if any new matter arises since the last continuance or adjournment, the defendant may take advantage of it, even after demurrer or issue, by alleging it in a plea *purs darrein continuance*.

(3.) The determination of an issue in law, or demurrer, is by the opinion of the judges of the court; which is afterwards entered on record.

SECT. XXII. *Of the several species of trial.*

(1.) TRIAL is the examination of the matter of fact put in issue.

(2.) The species of trials are, 1. By the *record*. 2. By *inspection*. 3. By *certificate*. 4. By *witnesses*. 5. By *wager of battel*. 6. By *wager of law*. 7. By *jury*.

(3.) Trial by the *record* is had, when the existence of such record is the point in issue.

(4.) Trial by *inspection* or *examination* is had by the court, principally when the matter in issue is the evident object of the senses.

(5.) Trial by *certificate* is had in those cases, where such certificate must have been conclusive to a jury.

(6.)

epitomis'd.

(6.) Trial by *witnesſes* (the regular method in the civil law) is only uſed on a writ of dower, when the death of the huſband is in iſſue.

(7.) Trial by *wager of battel*, in civil caſes, is only had on a writ of right; but, in lieu thereof, the tenant may have, at his option, the trial by the *grand aſſize*.

(8.) Trial by *wager of law* is only had, where the matter in iſſue may be ſuppoſed to have been privately tranſacted between the parties themſelves, without the intervention of other witneſſes.

3. A writ of *error*, from one court of record to another; to correct judgments, erroneous in point of law, and not helped by the ſtatutes of amendment and jeoffails.

(2.) Writs of error lie, 1. To the court of *king's bench*, from all inferior courts of record; from the court of *common-pleas* at Weſtmiſter; and from the court of *king's bench* in Ireland. 2. To the courts of *exchequer chamber*, from the law ſide of the court of *exchequer*; and from proceedings in the court of *king's bench* by bill. 3. To the houſe of *peers*, from proceedings in the court of *king's-bench* by original, and on writs of error; and from the ſeveral courts of *exchequer-chamber*.

cxvii.

### SECT. XXIII. *Of the trial by jury.*

(1.) TRIAL by *jury* is, 1. *Extraordinary*; as, by the grand aſſize, in writs of right; and by the grand jury, in writs of attainr. 2. *Ordinary*.

(2.) The method and proceſs of the *ordinary* trial by jury is, 1. The writ of *venire facias* to the ſheriff, coroners, or eliſors; with the ſubſequent compulſive proceſs of *habeas corpora*, or *diſtringas*. 2. The carrying down of the record to the court of *niſi prius*. 3. The ſheriff's return; or panel of, 1ſt, ſpecial, 2dly, common jurors. 4. The challenges; 1ſt, to the array; 2dly, to the polls of the jurors; either, *propter honoris reſpectum*, *propter defectum*, *propter aſſectum* (which is ſometimes a principal challenge, ſometimes to the favour), or *propter delictum*. 5. The *tales de circumſtantibus*. 6. The oath of the jury. 7. The evidence; which is either by proofs, 1ſt, written; 2dly, parole:—or, by the private knowledge of the jurors. 6. The verdict; which may be, 1ſt, privy; 2dly, public; 3dly, ſpecial.

cxviii.

### SECT. XXIV. *Of judgment, and its incidents.*

(1.) WHATEVER is tranſacted at the trial, in the court of *niſi prius*, is added to the record under the name of a *poſtea*: conſequent upon which is the *judgment*.

(2.) Judgment may be *arreſted* or *ſtayed* for cauſes, 1. *Extrinsic*, or *dehors* the record; as in the caſe of *new trials*. 2. *Intrinsic*, or within it; as where the declaration varies from the writ, or the verdict from the pleadings, and iſſue; or where the caſe, laid in the declaration, is not ſufficient to ſupport the action in point of law.

(3.) Where the iſſue is immaterial, or inſufficient, the court may award a *repleader*.

(4.) *Judgment* is the ſentence of the law, pronounced by the court, upon the matter contained in the record.

(5.) Judgments are, 1. *Interlocutory*; which are incomplete till perfected by a writ of inquiry. 2. *Final*.

(6.) *Coſts*, or expences of ſuit, are now the neceſſary conſequence of obtaining judgment.

cxix.

### SECT. XXV. *Of proceeding, in the nature of appeals.*

(1.) PROCEEDINGS, in the nature of *appeals* from judgment, are, 1. A writ of *attainr*; to impeach the verdict of a jury; which of late has been ſuperſeded by new trials. 2. A writ of *audita querela*; to diſcharge a judgment by matter that has ſince happened.

### SECT. XXVI. *Of execution.*

EXECUTION is the putting in force of the ſentence or judgment of the law. Which is effected, 1. Where poſſion of any hereditament is recovered: by writ of *habere facias ſeiſnam*, *poſſionem*, &c. 2. Where any thing is awarded to be done or rendered, by a ſpecial writ for that purpoſe: as, by writ of abatement, in caſe of nuſance; *retorna habendo*, and *capias in withernam*, in replevin; *diſtringas* and *ſcire facias*, in detinue. 3. Where money only is recovered; by writ of, 1ſt, *capias ad ſatiſficiendum*, againſt the body of the defendant; or, in default thereof, *ſcire facias* againſt his bail. 2dly, *Fieri facias*, againſt his goods and chattels. 3dly, *Levari facias*, againſt his goods and the profits of his lands. 4thly, *Eligit*, againſt his goods, and the poſſion of his lands. 5thly, *Extendi facias*, and other proceſs, on ſtatutes, recognizances, &c. againſt his *body*, *lands*, and *goods*.

### SECT. XXVII. *Of proceedings in the courts of equity.*

(1.) MATTERS of equity which belong to the peculiar jurisdiction of the court of *chancery*, are, 1. The guardianship of infants. 2. The cuſtody of ideots and lunatics. 3. The ſuperintendance of charities. 4. Commiſſions of bankrupt.

(2.) The court of *exchequer* and the duchy-court of *Lancaster*, have alſo ſome peculiar cauſes, in which the intereſt of the king is more immediately concerned.

(3.) *Equity* is the true ſenſe and found interpretation of the rules of law; and, as ſuch, is equally attended to by the judges of the courts both of common law and equity.

(4.) The eſſential differences, whereby the Engliſh courts of equity are diſtinguiſhed from the courts of law, are, 1. The mode of *proof*, by a diſcovery on the oath of the party; which gives a jurisdiction in matters of account, and fraud. 2. The mode of *trial*; by depositions taken in any part of the world. 3. The mode of *relief*; by giving a more ſpecific and extenſive remedy than can be had in the courts of law; as, by carrying agreements into execution, ſtaying waſte or other injuries by injunction, directing the ſale of incumbered lands, &c. 4. The true conſtruction of *ſecurities* for money, by conſidering them merely as a pledge. 5. The execution of *truſts*, or ſecond uſes, in a manner analogous to the law of legal eſtates.

(5.)

(5.) The proceedings in the court of chancery (to which those in the exchequer, &c. very nearly conform) are. 1. Bill. 2. Writ of *subpoena*; and, perhaps, injunction. 3. Process of contempt; viz. (ordinarily) attachment, attachment with proclamations, commission of rebellion, seizure at arms, and sequestrations. 4. Appearance. 5. Demurrer. 6. Plea. 7. Answer. 8. Exceptions; amendments; cross, or supplemental, bills; bills of revivor, interpleader, &c. 9. Replication. 10. Issue. 11. Depositions, taken upon interrogatories; and subsequent publication thereof. 12. Hearing. 13. Interlocutory decree; feigned issue, and trial; reference to the master, and report; &c. 14. Final decree. 15. Rehearing, or bill of review. 16. Appeal to parliament.

## CHAP. IV.

### OF PUBLIC WRONGS.

#### SECT. I. Of the nature of crimes, and their punishment.

(1.) IN treating of *public wrongs* may be considered, 1. The general nature of crimes and punishments. 2. The persons capable of committing crimes. 3. Their several degrees of guilt. 4. The several species of crimes, and their respective punishments. 5. The means of prevention. 6. The method of punishment.

(2.) A *crime*, or *misdemeanor*, is an act committed, or omitted, in violation of a public law either forbidding or commanding it.

(3.) Crimes are distinguished from civil injuries, in that they are a breach and violation of the *public* rights, due to the whole community, considered as a community.

(4.) *Punishments* may be considered with regard to, 1. The power; 2. The end; 3. The measure;—of their infliction.

(5.) The power, or right, of inflicting human punishments for *natural* crimes, or such as are *mala in se*, was by the law of nature vested in every individual; but, by the fundamental contract of society, is now transferred to the sovereign power; in which also is vested, by the same contract, the right of punishing *positive* offences, or such as are *mala prohibita*.

(6.) The end of human punishments is to prevent future offences; 1. By amending the offender himself. 2. By deterring others through his example. 3. By depriving him of the power to do future mischief.

(7.) The measure of human punishments must be determined by the wisdom of the sovereign power, and not by any uniform universal rule: though that wisdom may be regulated, and assisted, by certain general, equitable, principles.

#### SECT. II. Of the persons capable of committing crimes.

(1.) ALL persons are capable of committing crimes, unless there be in them a defect of will: for, to constitute a legal crime, there must be both a vicious will, and a vicious act.

(2.) The will does not concur with the act, 1. Where

there is a defect of *understanding*. 2. Where no will is exerted. 3. Where the act is *constrained* by force and violence.

(3.) A vicious will may therefore be wanting, in the cases of, 1. Infancy. 2. Idiocy, or lunacy. 3. Drunkenness; which doth not, however, excuse. 4. Misfortune. 5. Ignorance, or mistake of fact. 6. Compulsion, or necessity; which is, 1st, that of civil subjection; 2dly, that of duress *per minas*; 3dly, that of choosing the least pernicious of two evils, where one is unavoidable; 4thly, that of want, or hunger; which is no legitimate excuse.

(4.) The king, from his excellence and dignity, is also incapable of doing wrong.

#### SECT. III. Of principals and accessories.

(1.) THE different degrees of guilt in criminals are, 1. As principals. 2. As accessories.

(2.) A *principal* in a crime is, 1. He who commits the fact. 2. He who is present at, aiding, and abetting, the commission.

(3.) An *accessory* is he who doth not commit the fact, nor is present at the commission; but is in some sort concerned therein, either *before* or *after*.

(4.) Accessories can only be in petit treason, and felony: in high treason, and misdemeanors, all are principals.

(5.) An accessory, *before* the fact, is one who, being absent when the crime is committed, hath procured, counselled, or commanded, another to commit it.

(6.) An accessory *after* the fact, is where a person, knowing a felony to have been committed, receives, relieves, comforts, or assists, the felon. Such accessory is usually intitled to the benefit of clergy; where the principal, and accessory *before* the fact, are excluded from it.

#### SECT. IV. Of offences against GOD and religion.

(1.) CRIMES and misdemeanors cognizable by the laws of England are such as more immediately offend, 1. GOD, and his holy religion. 2. The law of nations. 3. The king, and his government. 4. The public, or commonwealth. 5. Individuals.

(2.) Crimes more immediately offending GOD and religion are, 1. *Apostacy*. For which the penalty is incapacity, and imprisonment. 2. *Heresy*. Penalty, for one species thereof: the same. 3. Offences against the established church:—Either, by *reviling* its ordinances. Penalties: fine; deprivation; imprisonment; forfeiture.—Or, by *nonconformity* to its worship: 1st, Thro' total *irreligion*. Penalty: fine. 2dly, Thro' protestant *dissenting*. Penalty: suspended by the toleration act. 3dly, Through *popery*, either in professors of the popish religion, popish recusants, convict, or popish priests. Penalties: incapacity; double taxes; imprisonment; fines; forfeitures; abjuration of the realm; judgment of felony, without clergy; and judgment of high treason. 4. *Blasphemy*. Penalty: fine, imprisonment, and corporal punishment. 5. *Profane swearing* and *curfing*. Penalty: fine, or house of correction. 6. *Witchcraft*; or, at least, the pretence thereto. Penalty: imprisonment, and pillory. 7. *Religious impostures*. Penalty: fine, imprisonment, and

corporal punishment. 8. *Simony*. Penalties: forfeiture of double value; incapacity. 9. *Sabbath-breaking*. Penalty: fine. 10. *Drunkennes*. Penalty: fine, or stocks. 11. *Lewdness*. Penalties: fine; imprisonment; house of correction.

cxxvii. SECT. V. *Of offences against the law of nations.*

(1.) The *law of nations* is a system of rules, deducible by natural reason, and established by universal consent, to regulate the intercourse between independent states.

(2.) In England, the *law of nations* is adopted in its full extent, as part of the law of the land.

(3.) Offences against this law are principally incident to whole states or nations; but, when committed by private subjects, are then the objects of the municipal law.

(4.) Crimes against the law of *nations*, animadverted on by the laws of England, are, 1. Violation of *safeguards*. 2. Infringement of the rights of *ambassadors*. Penalty, in both: arbitrary. 3. *Piracy*. Penalty: judgment of felony, without clergy.

cxxviii. SECT. VI. *Of high treason.*

(1.) CRIMES and misdemeanors more peculiarly offending the king and his government are, 1. *High treason*. 2. *Felonies* injurious to the prerogative. 3. *Præmunire*. 4. Other *misprisions* and *contempts*.

(2.) *High treason* may, according to the statute of Edward III. be committed, 1. By *compassing* or *imagining* the death of the king, or queen-consort, or their eldest son and heir; demonstrated by some overt act. 2. By *violating* the king's companion, his eldest daughter, or the wife of his eldest son. 3. By some overt act of *levying* war against the king in his realm. 4. By *adherence* to the king's enemies. 5. By *counterfeiting* the king's great or privy seal. 6. By *counterfeiting* the king's money, or importing counterfeit money. 7. By *killing* the chancellor, treasurer, or king's justices, in the execution of their offices.

(3.) *High treasons*, created by subsequent statutes, are such as relate, 1. To *papists*: as, the repeated defence of the pope's jurisdiction; the coming from beyond sea of a natural-born popish priest; the renouncing of allegiance, and reconciliation to the pope or other foreign power. 2. To the *coinage*, or other signatures of the king: as, counterfeiting (or, importing and uttering counterfeit) foreign coin, here current; forging the sign manual, privy signet, or privy seal; falsifying, &c. the current coin. 3. To the *protestant succession*: as, corresponding with, or remitting to, the late Pretender's sons; endeavouring to impede the succession; writing or printing, in defence of any Pretender's title, or in derogation of the act of settlement, or of the power of parliament to limit the descent of the crown.

(4.) The *punishment* of high treason, in *males*, is (generally) to be, 1. Drawn. 2. Hanged. 3. Embowelled alive. 4. Beheaded. 5. Quartered. 6. The head and quarters to be at the king's disposal. But, in treasons relating to the coin, only to be drawn, and hanged till dead. *Females*, in both cases, are to be drawn, and burned alive.

N<sup>o</sup> 176.

SECT. VII. *Of felonies injurious to the king's prerogative.*

(1.) FELONY is that offence which occasions the total forfeiture of lands or goods at common law; now usually also punishable with death, by hanging; unless through the benefit of clergy.

(2.) *Felonies* injurious to the king's prerogative (of which some are within, others without, clergy) are, 1. Such as relate to the *coin*: as, the wilful uttering of counterfeit money, &c.; (to which head some inferior misdemeanors affecting the coinage may be also referred). 2. Conspiring or attempting to kill a *privy counsellor*. 3. Serving *foreign* states, or enlisting soldiers for *foreign* service. 4. Embezzling the king's *armour* or *stores*. 5. *Desertion* from the king's armies, by land or sea.

SECT. VIII. *Of præmunire.*

(1.) PRÆMUNIRE, in its original sense, is the offence of adhering to the temporal power of the Pope, in derogation of the regal authority. Penalty: outlawry, forfeiture, and imprisonment; which hath since been extended to some offences of a different nature.

(2.) Among these are, 1. Importing Popish *trinkets*. 2. Contributing to the maintenance of Popish seminaries abroad, or Popish priests in England. 3. Molesting the possessors of abbey-lands. 4. Acting as broker in an usurious contract, for more than ten per cent. 5. Obtaining any stay of proceedings in suits for monopolies. 6. Obtaining an exclusive patent for gunpowder or arms. 7. Exertion of purveyance or pre-emption. 8. Asserting a legislative authority in both or either house of parliament. 9. Sending any subject a prisoner beyond sea. 10. Refusing the oaths of allegiance and supremacy. 11. Preaching, teaching, or advised speaking, in defence of the right of any pretender to the crown, or in derogation of the power of parliament to limit the succession. 12. Treating of other matters by the assembly of peers of Scotland, convened for electing their representatives in parliament. 13. Unwarrantable undertakings by unlawful subscriptions to public funds.

SECT. IX. *Of misprisions and contempts affecting the king and government.*

(1.) MISPRISIONS and *contempts* are all such high offences as are under the degree of capital.

(2.) These are, 1. *Negative*, in concealing what ought to be revealed. 2. *Positive*, in committing what ought not to be done.

(3.) *Negative* misprisions are, 1. Misprision of *treason*. Penalty: forfeiture and imprisonment. 2. Misprision of *felony*. Penalty: fine and imprisonment. 3. Concealment of *treasure trove*. Penalty: fine and imprisonment.

(4.) *Positive* misprisions or high misdemeanors and contempts, are, 1. *Mal-administration* of public trusts, which includes the crime of *peculation*. Usual penalties: banishment; fines; imprisonment; disability. 2. Contempts against the king's *prerogative*. Penalty: fine, and imprisonment. 3. Contempt against his

of person and government. Penalty: fine, imprisonment, and infamous corporal punishment. 4. Contempts against his *title*. Penalties: fine, and imprisonment; or fine, and disability. 5. Contempts against his *palaces, or courts of justice*. Penalties: fine; imprisonment; corporal punishment; loss of right hand; forfeiture.

SECT. X. *Of offences against public justice.*

(1.) CRIMES especially affecting the *commonwealth* are offences, 1. Against the public *justice*. 2. Against the public *peace*. 3. Against the public *trade*. 4. Against the public *health*. 5. Against the public *police or economy*.

(2.) Offences against the public *justice*, are, 1. *Embezzling or vacating records, and personating others in courts of justice*. Penalty: judgment of felony, usually without clergy. 2. *Compelling prisoners to become approvers*. Penalty: judgment of felony. 3. *Obstructing the execution of process*. 4. *Escapes*. 5. *Breach of prison*. 6. *Rescue*. Which four may (according to the circumstances) be either felonies, or misdemeanors punishable by fine and imprisonment. 7. *Returning from transportation*. This is felony, without clergy. 8. *Taking rewards to help one to his stolen goods*. Penalty: the same as for the theft. 9. *Receiving stolen goods*. Penalties: transportation; fine; and imprisonment.—10. *Theftbote*. 11. *Common barretry and suing in a feigned name*. 12. *Maintenance*. 13. *Champertry*. Penalty, in these four: fine, and imprisonment. 14. *Compounding prosecutions on penal statutes*. Penalty: fine, pillory, and disability. 15. *Conspiracy*; and threats of accusation in order to extort money, &c. Penalties: the villenous judgment; fine; imprisonment; pillory; whipping; transportation. 16. *Perjury, and subordination thereof*. Penalties: infamy; imprisonment; fine, or pillory; and, sometimes, transportation or house of correction. 17. *Bribery*. Penalty: fine, and imprisonment. 18. *Embarrery*. Penalty: infamy, fine; and imprisonment. 19. *Falsè verdict*. Penalty: the judgment in attain. 20. *Negligence of public officers, &c.* Penalty: fine, and forfeiture of the office. 21. *Oppression by magistrates*. 22. *Extortion of officers*. Penalty, in both: imprisonment, fine, and sometimes forfeiture, of the office.

SECT. XI. *Of offences against the public peace.*

OFFENCES against the public *peace* are, 1. *Riotous assemblies to the number of twelve*. 2. *Appearing armed, or hunting in disguise*. 3. *Threatening, or demanding any valuable thing, by letter*.—All these are felonies, without clergy. 4. *Destroying of turnpikes, &c.* Penalties: whipping; imprisonment; judgment of felony, with and without clergy.—5. *Affrays*. 6. *Riots, routs, and unlawful assemblies*. 7. *Tumultuous petitioning*. 8. *Forcible entry, and detainer*. Penalty, in all four: fine, and imprisonment. 9. *Going unusually armed*. Penalty: forfeiture of arms, and imprisonment. 10. *Spreading false news*. Penalty: fine, and imprisonment. 11. *Pretended prophecies*. Penalties: fine; imprisonment; and forfeiture. 12. *Challenges to fight*. Penalty: fine, imprisonment, and some-

times forfeiture. 13. *Libels*. Penalty: fine, imprisonment, and corporal punishment.

SECT. XII. *Of offences against public trade.*

OFFENCES against the public *trade*, are, 1. *Owling*. Penalties: fines; forfeiture; imprisonment; loss of left hand; transportation; judgment of felony. 2. *Smuggling*. Penalties: fines; loss of goods; judgment of felony, without clergy. 3. *Fraudulent bankruptcy*. Penalty: judgment of felony without clergy. 5. *Usury*. Penalty: fine, and imprisonment. 5. *Cheating*. Penalties: fine; imprisonment; pillory; tumbrel; whipping, or other corporal punishment, transportation.—6. *Forestalling*. 7. *Regrating*. 8. *Engrossing*. Penalties, for all three; loss of goods; fine; imprisonment; pillory. 9. *Monopolies, and combinations to raise the price of commodities*. Penalties: fines; imprisonment; pillory; loss of ear; infamy; and, sometimes, the pains of *præmure*. 10. *Exercising a trade, not having served as an apprentice*. Penalty; fine. 11. *Transporting, or residing abroad, of artificers*. Penalties; fine; imprisonment; forfeiture; incapacity; becoming aliens.

SECT. XIII. *Of offences against the public health, and public police or economy.*

(1.) OFFENCES against the public *health* are, 1. *Irregularity, in the time of the plague, or of quarantine*. Penalties: whipping; judgment of felony, with and without clergy. 2. *Selling unwholesome provisions*. Penalties: amercement; pillory; fine; imprisonment; abjuration of the town.

(2.) Offences against the public *police and economy* or domestic order of the kingdom, are, 1. *Those relating to clandestine and irregular marriages*. Penalties: judgment of felony, with and without clergy. 2. *Bigamy, or (more properly) polygamy*. Penalty: judgment of felony.—3. *Wandering, by soldiers or mariners*. 4. *Remaining in England, by Egyptians; or being in their fellowship one month*. Both these are felonies, without clergy. 5. *Common nuisances, 1<sup>st</sup>, by annoyances or purprestures in highways, bridges, and rivers; 2<sup>dly</sup>, by offensive trades and manufactures; 3<sup>dly</sup>, by disorderly houses; 4<sup>thly</sup>, by lotteries; 5<sup>thly</sup>, by cottages; 6<sup>thly</sup>, by fireworks; 7<sup>thly</sup>, by evesdropping*. Penalty, in all; fine.—8<sup>thly</sup>, *By common scolding*. Penalty: the cucking stool. 6. *Idleness, disorder, vagrancy, and incorrigible roguery*. Penalties: imprisonment; whipping; judgment of felony. 7. *Luxury, in diet*. Penalty, discretionary. 8. *Gaming*. Penalties: to gentlemen, fines; to others, fine and imprisonment; to cheating gamblers, fine, infamy, and the corporal pains of perjury. 9. *Destroying the game*. Penalties: fines, and corporal punishment.

SECT. XIV. *Of homicide.*

(1.) CRIMES especially affecting *individuals* are, 1. Against their *persons*. 2. Against their *habitations*. 3. Against their *property*.

(2.) Crimes against the *persons* of individuals, are, 1. *By homicide, or destroying life*. 2. *By other corporal injuries*.

Law of  
Eps and  
epitomised.

Law of  
England  
epitomised.

(3.) Homicide is, 1. *Justifiable*. 2. *Excusable*. 3. *Felonious*.  
 (4.) Homicide is *justifiable*, 1. By necessity, and command of law. 2. By permission of law; *1st*, for the furtherance of public justice; *2dly*, for prevention of some forcible felony.

(5.) Homicide is *excusable*. 1. *Per infortunium*, or by mis-adventure. 3. *Se def. nendo*, or in self-defence, by chance-medley. Penalty, in both: forfeiture of goods; which however is pardoned of course.

(6.) *Felonious* homicide is the killing of a human creature without justification or excuse. This is, 1. Killing *one's self*. 2. Killing *another*.

(7.) Killing *one's self*, or *self-murder*, is where one deliberately, or by any unlawful malicious act, puts an end to his own life. This is felony; punished by ignominious burial, and forfeiture of goods and chattels.

(8.) Killing *another* is, 1. *Manlaughter*. 2. *Murder*.

(9.) *Manlaughter* is the unlawful killing of another, without malice, express or implied. This is either, 1. Voluntary, upon a sudden heat. 2. Involuntary, in the commission of some unlawful act. Both are felony, but within clergy; except in the case of *stabbing*.

(10.) *Murder* is when a person, of sound memory and discretion, unlawfully killeth any reasonable creature, in being, and under the king's peace; with malice aforethought, either express or implied. This is felony, without clergy; punished with speedy death, and hanging in chains, or dissection.

(11.) *Petit treason* (being an aggravated degree of murder) is where the servant kills his master, the wife her husband, or the ecclesiastic his superior. Penalty: in men, to be drawn and hanged; in women, to be drawn and burned.

(2.) *Arson* is the malicious and wilful burning of the house, or out-house, of another man. This is felony; in some cases within, in others without, clergy.

(3.) *Burglary* is the breaking and entering, by night, into a mansion-house; with intent to commit a felony. This is felony, without clergy.

SECT. XVII. Of offences against private property.

(1.) CRIMES affecting the private property of individuals are, 1. *Larciny*. 2. *Malicious mischief*. 3. *Forgery*.

(2.) *Larciny* is, 1. *Simple*. 2. *Mixed*, or *compound*.

(3.) *Simple larciny* is the felonious taking, and carrying away, of the personal goods of another. And it is, 1. *Grand larciny*; being above the value of twelve pence. Which is felony; in some cases within, in others without, clergy. 2. *Petit larciny*; to the value of twelve pence or under. Which is also felony, but not capital; being punished with whipping, or transportation.

(4.) *Mixed*, or *compound*, larciny is that wherein the taking is accompanied with the aggravation of being, 1. From the *house*. 2. From the *person*.

(5.) Larcinies from the *house*, by day or night, are felonies without clergy, when they are, 1. Larcinies, above *twelve pence*, from a church; or by breaking a tent or booth in a market or fair, by day or night, the owner or his family being therein;—or by breaking a dwelling-house by day, any person being therein;—or from a dwelling-house by day, without breaking, any person therein being put in fear;—or from a dwelling-house by night, without breaking, the owner, or his family being therein and put in fear. 2. Larcinies, of *five shillings*, by breaking the dwelling-house, shop, or warehouse by day, though no person be therein;—or, by privately stealing in any shop, warehouse, coach-house, or stable, by day or night, without breaking, and though no person be therein. 3. Larcinies, of *forty shillings*, from a dwelling-house or its out-houses, without breaking, and though no person be therein.

(6.) Larciny from the *person* is, 1. By *privately stealing*, from the person of another, above the value of twelve pence. 2. By *robbery*; or the felonious and forcible taking, from the person of another, in or near the highway, goods or money of any value, by putting him in fear. These are both felonies without clergy. An attempt to rob is also felony.

(7.) *Malicious mischief*, by destroying dikes, goods, cattle, ships, garments, fish ponds, trees, woods, churches, chapels, meeting-houses, houses, out houses, corn, hay, straw, sea or river banks, hop-binds, coal-mines (or engines thereunto belonging), or any fences for inclosures by act of parliament, is felony; and, in most cases, without benefit of clergy.

(8.) *Forgery* is the fraudulent making or alteration of a writing, in prejudice of another's right. Penalties: fine; imprisonment; pillory; loss of nose and ears; forfeiture; judgment of felony, without clergy.

SECT. XV. Of offences against the persons of individuals.

CRIMES affecting the persons of individuals, by other corporal injuries not amounting to homicide, are, 1. *Mayhem*; and also *shooting* at another. Penalties: fine; imprisonment; judgment of felony, without clergy. 2. *Forcible abduction*, and *marriage* or *defilement*, of an heiress; which is felony: also, *stealing*, and *deflowering* or *marrying*, any woman-child under the age of sixteen years; for which the penalty is imprisonment, fine, and temporary forfeiture of her lands. — 3. *Rape*, and also *carnal knowledge*, of a woman child under the age of ten years. 4. *Buggery*, with man or beast. Both these are felonies, without clergy. — 5. *Assault*. 6. *Battery*; especially of clergymen. 7. *Wounding*. Penalties, in all three: fine; imprisonment; and other corporal punishment. 8. *False imprisonment*. Penalties: fine; imprisonment; and (in some atrocious cases) the pains of *præmunire*, and incapacity of office or pardon. 9. *Kidnapping*, or forcibly stealing away the king's subjects. Penalty: fine; imprisonment; and pillory.

SECT. XVI. Of offences against the habitations of individuals.

(1.) CRIMES, affecting the habitations of individuals are, 1. *Arson*. 2. *Burglary*.

SECT. XVIII. *Of the means of preventing offences.*

(1.) CRIMES and misdemeanors may be prevented, by compelling suspected persons to give security: which is effected by binding them in a conditional recognizance to the king, taken in court, or by a magistrate.

(2.) These recognizances may be conditioned, 1. To keep the peace. 2. To be of good behaviour.

(3.) They may be taken by any justice or conservator of the peace, at his own discretion; or, at the request of such as are intitled to demand the same.

(4.) All persons, who have given sufficient cause to apprehend an intended breach of the peace, may be bound over to keep the peace; and all those, that be not of good fame, may be bound to the good behaviour; and may, upon refusal in either case, be committed to gaol.

SECT. XIX. *Of courts of criminal jurisdiction.*

(1.) IS the method of punishment may be considered, 1. The several courts of criminal jurisdiction. 2. The several proceedings therein.

(2.) The criminal courts are, 1. Those of a public and general jurisdiction throughout the realm. 2. Those of a private and special jurisdiction.

(3.) Public criminal courts are, 1. The high court of parliament; which proceeds by impeachment. 2. The court of the lord high steward; and the court of the king in full parliament: for the trial of capitally indicted peers. 3. The court of king's bench. 4. The court of chivalry. 5. The court of admiralty, under the king's commission. 6. The courts of oyer and terminer, and general gaol-delivery. 7. The court of quarter-sessions of the peace. 8. The sheriff's tourn. 9. The court leet. 10. The court of the coroner. 11. The court of the clerk of the market.

(4.) Private criminal courts are, 1. The court of the lord steward, &c. by statute of Henry VII. 2. The court of the lord steward, &c. by statute of Henry VIII. 3. The university courts.

SECT. XX. *Of summary convictions.*

(1.) PROCEEDINGS in criminal courts are, 1. Summary. 2. Regular.

(2.) Summary proceedings are such, whereby a man may be convicted of divers offences, without any formal process or jury, at the discretion of the judge or judges appointed by act of parliament, or common law.

(3.) Such are, 1. Trials of offences and frauds against the laws of excise and other branches of the king's revenue. 2. Convictions before justices of the peace upon a variety of minute offences, chiefly against the public police. 3. Attachments for contempts to the superior courts of justice.

SECT. XXI. *Of arrests.*

(1.) REGULAR proceedings in the courts of com-

mon law, are, 1. Arrest. 2. Commitment and bail. 3. Prosecution. 4. Process. 5. Arraignment, and its incident. 6. Plea and issue. 7. Trial and conviction. 8. Clergy. 9. Judgment, and its consequences. 10. Reversal of judgment. 11. Reprieve or pardon. 12. Execution.

(2.) An arrest is the apprehending, or restraining, of one's person; in order to be forthcoming to answer a crime whereof one is accused or suspected.

(3.) This may be done, 1. By warrant. 2. By an officer, without warrant. 3. By a private person, without warrant. 4. By hue and cry.

SECT. XXII. *Of commitment and bail.*

cxlii.

(1.) COMMITMENT is the confinement of one's person in prison, for safe custody, by warrant from proper authority; unless, in bailable offences, he puts in sufficient bail, or security for his future appearance.

(2.) The magistrate is bound to take reasonable bail, if offered; but the offender be not bailable.

(3.) Such are, 1. Persons accused of treason; or, 2. Of murder; or, 3. Of manslaughter, by indictment; or if the prisoner was clearly the slayer. 4. Prison-breakers, when committed for felony. 5. Outlaws. 6. Those who have abjured the realm. 7. Approvers, and appellees. 8. Persons taken with the mainour. 9. Persons accused of arson. 10. Excommunicated persons.

(4.) The magistrate may, at his discretion, admit to bail, or otherwise, persons not of good fame, charged with other felonies, whether as principals or as accessories.

(5.) If they be of good fame, he is bound to admit them to bail.

(6.) The court of king's bench, or its judges in time of vacation, may bail in any case whatsoever.

SECT. XXIII. *Of the several modes of prosecution.*

cxliii.

(1.) PROSECUTION, or the manner of accusing offenders, is either by a previous finding of a grand jury; as, 1. By presentment. 2. By indictment. Or, without such finding. 3. By information. 4. By appeal.

2. A presentment is the notice taken by a grand jury of any offence, from their own knowledge or observation.

(3.) An indictment is a written accusation of one or more persons of a crime or misdemeanor, preferred to, and presented on oath by, a grand jury; expressing, with sufficient certainty, the person, time, place, and offence.

(4.) An information is, 1. At the suit of the king and a subject, upon penal statutes. 4. At the suit of the king only. Either, 1. Filed by the attorney-general ex officio, for such misdemeanors as affect the king's person or government: or, 2. Filed by the master of the crown-office (with leave of the court of king's bench) at the relation of some private subject, for other gross and notorious misdemeanors. All dif-

fering from indictments in this; that they are exhibited by the informer, or the king's officer; and not on the oath of a grand jury.

(5.) An *appeal* is an accusation or suit, brought by one private subject against another, for larceny, rape, mayhem, arson, or homicide; which the king cannot discharge or pardon, but the party alone can release.

cxlvi. SECT. XXIV. *Of process upon an indictment.*

(1.) PROCESS to bring in an offender, when indicted in his absence, is, in misdemeanors, by *venire facias*, distress infinite, and *capias*: in capital crimes, by *capias* only: and, in both, by outlawry.

(2.) During this stage of proceedings, the indictment may be removed into the court of king's bench from any inferior jurisdiction, by writ of *certiorari facias*: and cognizance must be claimed in places of exclusive jurisdiction.

cxlvii. SECT. XXV. *Of arraignment, and its incidents.*

(1.) ARRAIGNMENT is the calling of the prisoner to the bar of the court, to answer the matter of the indictment.

(2.) Incident hereunto are, 1. The standing mute of the prisoner; for which, in petit treason, and felonies of death, he shall undergo the *peine fort & dure*. 2. His confession; which is either *simple*, or by way of *approvement*.

cxlviii. SECT. XXVI. *Of plea, and issue.*

(1.) THE *plea*, or defensive matter alleged by the prisoner, may be, 1. A plea to the jurisdiction. 2. A demurrer in point of law. 3. A plea in abatement. 4. A special plea in bar; which is, 1st, *Auterfois acquit*; 2dly, *Auterfois convict*; 3dly, *Auterfois attain*; 4thly, A pardon. 5. The general issue, not guilty.

(2.) Hereupon *issue* is joined by the clerk of the arraigns, on behalf of the king.

cxlix. SECT. XXVII. *Of trial, and conviction.*

(1.) TRIALS of offences, by the laws of England, were and are, 1. By *ordeal*, of either fire or water. 2. By the *corsued*. Both these have been long abolished. 3. By *battel*, in appeals and improvements. 4. By the *peers* of Great Britain. 5. By *jury*.

(2.) The method and process of trial by *jury* is, 1. The impannelling of the jury. 2. Challenges; 1st, for cause; 2dly, peremptory. 3. *Tales de circumstantibus*. 4. The oath of the jury. 5. The evidence. 6. The verdict, either general or special.

(3.) *Conviction* is when the prisoner pleads, or is found guilty: whereupon, in felonies, the prosecutor is intitled to, 1. His expences. 2. Restitution of his goods.

cl. SECT. XXVIII. *Of the benefit of clergy.*

(1.) CLERGY, or the benefit thereof, was originally derived from the usurped jurisdiction of the Popish

ecclesiastics; but hath since been new-modelled by several statutes.

(2.) It is an exemption of the clergy from any other secular punishment for felony, than imprisonment for a year, at the court's discretion; and it is extended likewise, absolutely, to lay peers, for the first offence; and to all lay-commoners, for the first offence also, upon condition of branding, imprisonment, or transportation.

(3.) All felonies are intitled to the benefit of clergy, except such as are now ousted by particular statutes.

(4.) Felons, on receiving the benefit of clergy, (though they forfeit their goods to the crown), are discharged of all clergyable felonies before committed, and restored in all capacities and credits.

cl. SECT. XXIX. *Of judgment, and its consequences.*

(1.) JUDGMENT (unless any matter be offered in arrest thereof) follows upon conviction; being the pronouncing of that punishment which is expressly ordained by law.

(2.) *Attainder* of a criminal is the immediate consequence, 1. Of having judgment of death pronounced upon him. 2. Of outlawry for a capital offence.

(3.) The consequences of attainder are, 1. *Forfeiture* to the king. 2. *Corruption of blood*.

(4.) *Forfeiture* to the king, is, 1. Of real estates, upon attainder;—in high treason, absolutely, till the death of the late Pretender's sons;—in felonies, for the king's year, day, and waste;—in misprison of treason, assaults on a judge, or battery sitting the courts; during the life of the offender. 2. Of personal estates, upon conviction; in all treason, misprison of treason, felony, excusable homicide, petit larceny, standing mute upon arraignment, the above-named contempts of the king's courts, and flight.

(5.) *Corruption of blood* is an utter extinction of all inheritable quality therein: so that, after the king's forfeiture is first satisfied, the criminal's lands escheat to the lord of the fee; and he can never afterwards inherit, be inherited, or have any inheritance derived through him.

cl. SECT. XXX. *Of reversal of judgment.*

(1.) JUDGMENTS, and their consequences, may be avoided, 1. By *falsifying*, or *reversing*, the attainders. 2. By *reprieve*, or *pardon*.

(2.) Attainders may be *falsified*, or *reversed*. 1. Without a writ of error; for matter *dehors* the record. 2. By writ of error; for mistakes in the judgment, or record. 3. By act of parliament; for favour.

(3.) When an *outlawry* is reversed, the party is restored to the same plight as if he had appeared upon the *capias*. When a *judgment*, on conviction, is reversed, the party stands as if never accused.

cl. SECT. XXXI. *Of reprieve, and pardon.*

(1.) A REPRIEVE is a temporary suspension of the judgment, 1. *Ex arbitrio judicis*. 2. *Ex necessitate legis*; for pregnancy, insanity, or the trial of identity of person, which must always be tried *instante*.

(2.)

(2.) A pardon is a permanent avoider of the judgment by the king's majesty, in offences against his crown and dignity; drawn in due form of law, allowed in open court, and thereby making the offender a new man.

(3.) The king cannot pardon, 1. Imprisonment of the subject beyond the seas. 2. Offences prosecuted by appeal. 3. Common nuisances. 4. Offences against popular or penal statutes, after information brought by a subject. Nor is his pardon pleadable to an impeachment by the commons in parliament.

SECT. XXXII. *Of execution.*

(1.) EXECUTION is the completion of human punishment, and must be strictly performed in the manner which the law directs.

(2.) The warrant for execution is sometimes under the hand and seal of the judge; sometimes by writ from the king; sometimes by rule of court; but commonly by the judge's signing the calendar of prisoners, with their separate judgments in the margin.

PART III. THE LAW OF SCOTLAND.

GENERAL OBSERVATIONS.

1. THE municipal law of Scotland, as of most other countries, consists partly of statutory or written law, which has the express authority of the legislative power; partly of customary or unwritten law, which derives force from its presumed or tacit consent.

2. Under our statutory or written law is comprehended, (1.) Our acts of parliament: not only those which were made in the reign of James I. of Scotland, and from thence down to our union with England in 1707, but such of the British statutes enacted since the union as concerned this part of the united kingdom.

3. The remains of our ancient written law were published by Sir John Skene clerk-register, in the beginning of the last century, by licence of parliament. The books of *Regiam Majestatem*, to which the whole collection owes its title, seem to be a system of Scots law, written by a private lawyer at the command of David I.; and though no express confirmation of that treatise by the legislature appears, yet it is admitted to have been the ancient law of our kingdom by express statutes. The borough-laws, which were also enacted by the same King David, and the statutes of William, Alexander II. David II. and the three Roberts, are universally allowed to be genuine. Our parliaments have once and again appointed commissions to revise and amend the *Regiam Majestatem*, and the other ancient books of our law, and to make their report: but, as no report appears to have been made, nor consequently any ratification by parliament, none of these remains are received, as of proper authority, in our courts; yet they are of excellent use in proving and illustrating our most ancient customs.

4. Our written law comprehends, (2.) The acts of federent, which are ordinances for regulating the forms of proceeding before the court of session in the administration of justice, made by the judges, who have a delegated power from the legislature for that purpose. Some of these acts dip upon matter of right, which declare what the judges apprehend to be the law of Scotland, and what they are to observe afterwards as a rule of judgment.

5. The civil, or Roman and canon laws, though they are not perhaps to be deemed proper parts of our written law, have undoubtedly had the greatest influence in Scotland. The powers exercised by our sovereigns and judges have been justified upon no other ground, than that they were conformable to the civil

or canon laws; and a special statute was judged necessary, upon the reformation, to rescind such of their constitutions as were repugnant to the Protestant doctrine. From that period, the canon law has been little respected, except in questions of tithes, patronages, and some few more articles of ecclesiastical right: but the Roman continues to have great authority in all cases where it is not derogated from by statute or custom, and where the genius of our law suffers us to apply it.

6. Our unwritten or customary law, is that which, without being expressly enacted by statute, derives its force from the tacit consent of king and people; which consent is presumed from the ancient custom of the community. Custom, as it is equally founded in the will of the lawgiver with written law, has therefore the same effects: hence, as one statute may be explained or repealed by another, so a statute may be explained by the uniform practice of the community, and even go into disuse by a posterior contrary custom. But this power of custom to derogate from prior statutes is generally confined by lawyers to statutes concerning private right, and does not extend to those which regard public policy.

7. An uniform tract of the judgments or decisions of the court of session is commonly considered as part of our customary law; and without doubt, where a particular custom is thereby fixed or proved, such custom of itself constitutes law: but decisions, though they bind the parties litigating, have not, in their own nature, the authority of law in similar cases; yet, where they continue uniform, great weight is justly laid on them. Neither can the judgments of the house of peers of Great Britain reach farther than to the parties in appeal, since in these the peers act as judges, not as lawgivers.

8. Though the laws of nature are sufficiently published by the internal suggestion of natural light, civil laws cannot be considered as a rule for the conduct of life, till they are notified to those whose conduct they are to regulate. The Scots acts of parliament were, by our most ancient custom, proclaimed in all the different shires, boroughs, and baron courts, of the kingdom. But after our statutes came to be printed, that custom was gradually neglected; and at last, the publication of our laws, at the market-cross of Edinburgh, was declared sufficient; and they became obligatory 40 days thereafter. British statutes are deemed sufficiently notified, without formal promulgation; either because the printing is truly a publication; or because

Law of  
Scotland.

every subject is, by a maxim of the English law, party to them, as being present in parliament, either by himself or his representative. After a law is published, no pretence of ignorance can excuse the breach of it.

9. As laws are given for the rule of our conduct, they can regulate future cases only; for past actions, being out of our power, can admit of no rule. Declaratory laws form no exception to this; for a statute, where it is declaratory of a former law, does no more than interpret its meaning; and it is included in the notion of interpretation, that it must draw back to the date of the law interpreted.

Interpreta-  
tion of laws.

10. By the rules of interpreting statute-law received in Scotland, an argument may be used from the title to the act itself, a *rubro ad nigrum*; at least, where the rubric has been either originally framed, or afterwards adopted by the legislature. The preamble or narrative, which recites the inconveniences that had arisen from the former law; and the causes inducing the enactment, may also lead a judge to the general meaning of the statute. But the chief weight is to be laid on the statutory words.

11. Laws, being directed to the unlearned as well as the learned, ought to be construed in their most obvious meaning, and not explained away by subtle distinctions; and no law is to suffer a figurative interpretation, where the proper sense of the words is as commodious, and equally fitted to the subject of the statute. Laws ought to be explained so as to exclude absurdities, and in the sense which appears most agreeable to former laws, to the intention of the lawgiver, and to the general frame and structure of the constitution. In prohibitory laws, where the right of acting is taken from a person, solely for the private advantage of another, the consent of him, in whose behalf the law was made, shall support the act done in breach of it; but the consent of parties immediately interested has no effect in matters which regard the public utility of a state. Where the words of a statute are capable but of one meaning, the statute must be observed, however hard it may bear on particular persons. Nevertheless, as no human system of laws can comprehend all possible cases, more may sometimes be meant by the lawgiver than is expressed; and hence certain statutes, where extension is not plainly excluded, may be extended beyond the letter, to similar and omitted cases; others are to be confined to the statutory words.

Strict.

12. A strict interpretation is to be applied, (1.) To correctory statutes, which repeal or restrict former laws; and to statutes which enact heavy penalties, or restrain the natural liberties of mankind. (2.) Laws, made on occasion of present exigencies in a state, ought not to be drawn to similar cases, after the pressure is over. (3.) Where statutes establish certain solemnities as requisite to deeds, such solemnities are not suppleable by equivalents; for solemnities lose their nature, when they are not performed specifically. (4.) A statute, which enumerates special cases, is, with difficulty, to be extended to cases not expressed; but, where a law does not descend to particulars, there is greater reason to extend it to similar cases. (5.) Statutes, which carry a dispensation or privilege to particular persons or societies, suffer a strict interpretation; because they derogate from the general law, and imply a burden upon the rest of the community. But at no rate can a pri-

vilige be explained to the prejudice of those in whose behalf it was granted. As the only foundation of customary law is usage, which consists in fact, such law can go no farther than the particular usage has gone.

13. All statutes, concerning matters specially favoured by law, receive an ample interpretation; as laws for the encouragement of commerce, or of any useful public undertaking, for making effectual the wills of dying persons, for restraining fraud, for the security of creditors, &c. A statute, though its subject-matter should not be a favourite of the law, may be extended to similar cases, which did not exist when the statute was made; and for which, therefore, it was not in the lawgiver's power to provide.

14. Every statute, however unfavourable, must receive the interpretation necessary to give it effect: and, on the other hand, in the extension of favourable laws, scope must not be given to the imagination, in discovering remote resemblances; the extension must be limited to the cases immediately similar. Where there is ground to conclude that the legislature has omitted a case out of the statute purposely, the statute cannot be extended to that case, let it be ever so similar to the cases expressed.

15. The objects of the laws of Scotland, according to Mr Erskine, one of the latest writers on the subject, are, Persons, Things, and Actions.

## CHAP. I.

### OF PERSONS.

**A**MONG persons, judges, who are invested with jurisdiction, deserve the first consideration.

#### SECT. I. *Of jurisdiction and judges in general.*

**JURISDICTION** is a power conferred upon a judge or magistrate, to take cognizance of and decide causes according to law, and to carry his sentences into execution. That tract of ground, or district, within which a judge has the right of jurisdiction, is called his *territory*: and every act of jurisdiction exercised by a judge without his territory, either by pronouncing sentence, or carrying it into execution, is null.

1. The supreme power, which has the right of enacting laws, falls naturally to have the right of erecting courts, and appointing judges, who may apply these laws to particular cases; but, in Scotland, this right has been always intrusted with the crown, as having the executive power of the state.

2. Jurisdiction is either supreme, inferior, or mixed. That jurisdiction is supreme, from which there lies no appeal to a higher court. Inferior courts are those whose sentences are subject to the review of the supreme courts, and whose jurisdiction is confined to a particular territory. Mixed jurisdiction participates of the nature both of the supreme and inferior: thus the judge of the high court of admiralty, and the commissaries of Edinburgh, have an universal jurisdiction over Scotland, and they can review the decrees of inferior admirals and commissaries; but since their own decrees are subject to the review of the courts of session or justiciary, they are, in that respect, inferior courts.

3. Jurisdiction is either civil or criminal: by the first, questions of private right are decided; by the other, crimes are punished. But, in all jurisdiction, though merely

w of  
land.Law of  
Scotland.

merely civil, there is a power inherent in the judge to punish either corporally, or by a pecuniary fine, those who offend during the proceedings of the court, or who shall afterwards obstruct the execution of the sentence.

5. Jurisdiction is either privative or cumulative. Privative jurisdiction, is that which belongs only to one court, to the exclusion of all others. Cumulative, or otherwise called *concurrent*, is that which may be exercised by any one of two or more courts, in the same cause. In civil cumulative jurisdiction, the private pursuer has the right of election before which of the courts he shall sue; but as, in criminal questions which are prosecuted by a public officer of court, a collision of jurisdiction might happen, through each of the judges claiming the exercise of their right, that judge, by whose warrant the delinquent is first cited or apprehended (which is the first step of jurisdiction), acquires thereby (*jure preventionis*) the exclusive right of judging in the cause.

6. All rights of jurisdiction, being originally granted in consideration of the fitness of the grantee, were therefore personal, and died with himself. But, upon the introduction of the feudal system, certain jurisdictions were annexed to lands, and descended to heirs, as well as the lands to which they were annexed; but now all heritable jurisdictions, except those of admiralty and a small pittance reserved to barons, are either abolished, or resumed and annexed to the crown.

7. Jurisdiction is either proper or delegated. Proper jurisdiction, is that which belongs to a judge or magistrate himself, in virtue of his office. Delegated, is that which is communicated by the judge to another who acts in his name, called a *depute* or *deputy*. Where a deputy appoints one under him, he is called a *substitute*. No grant of jurisdiction, which is an office requiring personal qualifications, can be delegated by the grantee to another, without an express power in the grant.

8. Civil jurisdiction is founded, 1. *Ratione domicilii*, if the defender has his domicile within the judge's territory. A domicile is the dwelling place where a person lives with an intention to remain; and custom has fixed it as a rule, that residence for 40 days founds jurisdiction. If one has no fixed dwelling place, e. g. a soldier, or a travelling merchant, a personal citation against him within the territory is sufficient to found the judge's jurisdiction over him, even in civil questions. As the defender is not obliged to appear before a court to which he is not subject, the pursuer must follow the defender's domicile.

9. It is founded, 2. *Ratione rei sitæ*, if the subject in question lie within the territory. If that subject be immovable, the judge, whose jurisdiction is founded in this way, is the sole judge competent, excluding the judge of the domicile.

10. Where one, who has not his domicile within the territory, is to be sued before an inferior court *ratione rei sitæ*, the court of session must be applied to, whose jurisdiction is universal, and who, of course, grants letters of supplement to cite the defender to appear before the inferior judge. Where the party to be sued resides in another kingdom, and has an estate in this, the court of session is the only proper court, as the *commune forum* to all persons residing abroad; and the

defender, if his estate be heritable, is considered as lawfully summoned to that court, by a citation at the market cross of Edinburgh, and pier and shore of Leith: but where a stranger, not a native of Scotland, has only a moveable estate in this kingdom, he is deemed to be so little subject to the jurisdiction of our courts, that action cannot be brought against him till his effects be first attached by an arrestment *jurisdictionis fundande causæ*; which is laid on by a warrant issuing from the supreme courts of session, or admiralty, or from that within whose territory the subject is situated, at the suit of the creditor.

11. A judge may, in special cases, arrest or secure the persons of such as have neither domicile nor estate within his territory, even for civil debts. Thus, on the border between Scotland and England, warrants are granted of course by the judge-ordinary of either side, against those who have their domicile upon the opposite side, for arresting their persons, till they give caution *judicio filii*: and even the persons of citizens or natives may be so secured, where there is just reason to suspect that they are *in meditatione fugæ*, i. e. that they intend suddenly to withdraw from the kingdom; upon which suspicion, the creditor who applies for the warrant must make oath. An inhabitant of a borough-royal, who has furnished one who lives without the borough in meat, clothe, or other merchandize, and who has no security for it but his own account-book, may arrest his debtor, till he give security *judicio filii*.

12. A judge may be declined, i. e. his jurisdiction disowned judicially, 1. *Ratione causæ*, from his incompetency to the special cause brought before him. 2. *Ratione suspecti judicis*; where either the judge himself, or his near kinsman, has an interest in the suit. No judge can vote in the cause of his father, brother, or son, either by consanguinity or affinity; nor in the cause of his uncle or nephew by consanguinity. 3. *Ratione privilegii*; where the party is by privilege exempted from their jurisdiction.

13. Prorogated jurisdiction (*jurisdiction in consensu*) is that which is, by the consent of parties, conferred upon a judge, who, without such consent, would be incompetent. Where a judge is incompetent, every step he takes must be null, till his jurisdiction be made competent by the party's actual submission to it. It is otherwise where the judge is competent, but may be declined by the party upon privilege.

14. In order to prorogation, the judge must have jurisdiction, such as may be prorogated. Hence, prorogation cannot be admitted where the judge's jurisdiction is excluded by statute. Yet where the cause is of the same nature with those to which the judge is competent, though law may have confined his jurisdiction within a certain sum, parties may prorogate it above that sum unless where prorogation is prohibited. Prorogation is not admitted in the king's causes; for the interest of the crown cannot be hurt by the negligence of its officers.

15. All judges must at their admission swear, 1. The oath of allegiance, and subscribe the assurance; 2. The oath of abjuration; 3. The oath of supremacy; lastly, The oath *de fidei administratione*.

16. A party who has either properly declined the jurisdiction of the judge before whom he had been cited, or who thinks himself aggrieved by any proceed-

Law of Scotland.

ings in the cause, may, before decree, apply to the court of session to issue letters of advocation for calling the action from before the inferior court to themselves. The grounds, therefore, upon which a party may pray for letters of advocation, are incompetency and iniquity. Under incompetency, is comprehended not only defect of jurisdiction, but all the grounds of declining a jurisdiction, in itself competent, arising either from suspicion of the judge, or privilege in the parties. A judge is said to commit iniquity, when he either delays justice, or pronounces sentence, in the exercise of his jurisdiction, contrary to law.

Advocation how limited.

17. That the court of session may not waste their time in trifles, no cause for a sum below twelve pounds Sterling can be advocated to the court of session from the inferior judge competent: but if an inferior judge shall proceed upon a cause to which he is incompetent, the cause may be carried from him by advocation, let the subject be ever so inconsiderable.

lvii.

SECT. II. Of the supreme judges and courts of Scotland.

King, and

1. THE king, who is the fountain of jurisdiction, might by our constitution have judged in all causes, either in his own person, or by those whom he was pleased to vest with jurisdiction.

parliament.

2. The parliament of Scotland, as our court of the last resort, had the right of reviewing the sentences of all our supreme courts.

Parliament of Great Britain.

3. By the treaty of union, 1707, the parliaments of Scotland and England are united into one parliament of Great Britain. From this period, the British house of peers, as coming in place of the Scots parliament, is become our court of the last resort, to which appeals lie from all the supreme courts of Scotland: but that court has no original jurisdiction in civil matters, in which they judge only upon appeal. By art. 22. of that treaty, the Scots share of the representation in the house of peers is fixed to 16 Scots peers elective; and in the house of commons, to 45 commoners, of which 30 are elected by the freeholders of counties, and 15 by the royal boroughs. The Scots privy council was also thereupon abolished, and sunk into that of Great Britain, which for the future is declared to have no other powers than the English privy council had at the time of the union.

Court of Session.

4. A court was erected in 1425, consisting of certain persons to be named by the king, out of the three estates of parliament, which was vested with the jurisdiction formerly lodged in the council, and got the name of the *session*, because it was ordained to hold annually a certain number of sessions at the places to be specially appointed by the king. This court had a jurisdiction, cumulative with the judge ordinary, in spuilzies, and other possessory actions, and in debts; but they had no cognifance in questions of property of heritable subjects. No appeal lay from its judgments to the parliament. The judges of this court served by rotation, and were changed from time to time, after having sat 40 days; and became so negligent in the administration of justice, that it was at last thought necessary to transfer the jurisdiction of this court to a council to be named by the king, called the *daily council*.

N<sup>o</sup> 177.

Law of Scotland. College of justice.

5. The present model of the court of session, or college of justice, was formed in the reign of James V. The judges thereof, who were vested with an universal civil jurisdiction, consisted originally of seven churchmen, seven laymen, and a president, whom it behoved to be a prelate; but spiritual judges were in 1584 partly, and in 1640 totally, prohibited. The judges of session have been always received by warrants from the crown. Anciently his majesty seems to have transferred to the court itself the right of choosing their own president; and in a *feferunt* recorded June 26. 1593. the king condescended to present to the lords, upon every vacancy in the bench, a list of three persons, out of which they were to choose one. But his majesty soon resumed the exercise of both rights, which continued with the crown till the usurpation; when it was ordained, that the king should name the judges of the session, by the advice of parliament. After the restoration, the nomination was again declared to be solely in the sovereign.

Judges, whom n. med.

6. Though judges may, in the general case, be named at the age of 21 years, the lords of session must be at least 25. No person can be named lord of session, who has not served as an advocate or principal clerk of session for five years, or as a writer to the signet for ten; and in the case of a writer to the signet, he must undergo the ordinary trials upon the Roman law, and be found qualified two years before he can be named. Upon a vacancy in the bench, the king presents the successor by a letter addressed to the lords, wherein he requires them to try and admit the person presented. The powers given to them to reject the presentee upon trial are taken away, and a bare liberty to remonstrate substituted in its place.

Their qualification and trial

7. Besides the 15 ordinary judges, the king was allowed to name three or four lords of his great council, who might sit and vote with them. These extraordinary lords were suppressed in the reign of Geo. I.

8. The appellation of the *college of justice* is not confined to the judges, who are distinguished by the name of *senators*; but comprehends advocates, clerks of session, writers to the signet, and others, as described, *Act S.* 23d Feb. 1687. Where, therefore, the college of justice is intitled to any privilege, it extends to all the members of the college. They are exempted from watching, warding, and other services within borough; and from the payment of ministers stipends, and of all customs, &c. imposed upon goods carried to or from the city of Edinburgh. Part of these privileges and immunities were lately called in question by the city of Edinburgh; but they were found by the court of session (affirmed upon appeal) to be in full force.

Privilege of the college of justice.

9. Though the jurisdiction of the session be properly limited to civil causes, the judges have always sustained themselves as competent to the crime of falsehood. Where the falsehood deserves death or demembration, they, after finding the crime proved, remit the criminal to the court of judicary. Special statute has given to the court of session jurisdiction in contraventions of law-burrows, deforcements, and breach of arrestment; and they have been in use to judge in battery *pendente lite*, and in usury.

Jurisdiction of the session.

10. In certain civil causes, the jurisdiction of the session is exclusive of all inferior jurisdictions; as in declarators of property, and other competitions of heritable

2

table

table rights, provings of the tenor, *cessiones bonorum*, restitution of minors, reductions of decrees or of writings, sales of the estates of minors or bankrupts, &c. In a second class of causes, their jurisdiction can be only exercised in the way of review, after the cause is brought from the inferior court; as in maritime and consistorial causes, which must be pursued in the first instance before the admiral or commissary; and in actions below twelve pounds Sterling, which must be commenced before the judge-ordinary. In all civil actions, which fall under neither of these classes, the jurisdiction of the session is concurrent, even in the first instance, with that of the judge-ordinary. The session may proceed as a court of equity by the rules of conscience, in abating the rigour of law, and giving aid in proper cases to such as in a court of law can have no remedy: and this power is inherent in the supreme court of every country, where separate courts are not established for law and for equity.

This court formerly met upon the 12th day of June and rose upon the 11th day of August for the summer session; but now, in consequence of an act passed in the session of parliament 1790, it meets on the 12th of May and rises on the 11th of July for the summer session; the winter seditur still remaining as formerly, viz. from the 12th of November to the 11th of March inclusive.

11. The supreme criminal judge was styled the Justiciar; and he had anciently an universal civil jurisdiction, even in matters of heritage. He was obliged to hold two justice courts or ayres yearly at Edinburgh or Peebles, where all the freeholders of the kingdom were obliged to attend. Besides this universal court, special justice-ayres were held in all the different shires in the kingdom twice in the year. These last having gone into disuse, eight deputies were appointed, two for every quarter of the kingdom, who should make their circuits over the whole in April and October.

12. The office of deputies was suppressed in 1672; and five lords of session were added, as commissioners of justiciary, to the justice-general and justice-clerk. The justice-general, if present, is constant president of the court, and in his absence the justice-clerk. The kingdom is divided into three districts, and two of the judges are appointed to hold circuits in certain boroughs of each district twice in the year; one judge may proceed to business in the absence of his colleague. In trials before this court the evidence was always taken down in writing till the act 23d Geo. III. was passed; by which the judges may try and determine all causes by the verdict of an assize upon examining the witnesses  *viva voce* without reducing the testimony into writing, unless it shall appear more expedient to proceed in the former way, which they have it in their power to do. This act was at first temporary, but is now made perpetual by 27th Geo. III. cap. 18.

13. By an old statute, the crimes of robbery, rape, murder, and wilful fire-raising, (the four pleas of the Crown), are said to be reserved to the King's court of justiciary; but the only crime in which, *de praxi*, the jurisdiction of justiciary became at last exclusive of all inferior criminal jurisdiction, was that of high treason. The court of justiciary, when sitting at Edinburgh, has a power of advocating causes from all inferior criminal judges, and of suspending their sentences.

VOL. IX. Part II.

14. The circuit-court can also judge in all criminal causes which do not infer death or dememoration, upon appeal from any inferior court within their district; and has a supreme civil jurisdiction, by way of appeal, in all causes not exceeding twelve pounds Sterling, in which their decrees are not subject to review; but no appeal is to lie to the circuit, till the cause be finally determined in the inferior court.

15. The court of exchequer, as the King's chamberlain court, judged in all questions of the revenue. In pursuance of the treaty of Union, that court was abolished, and a new court erected, consisting of the Lord High Treasurer of Great Britain, and a chief Baron, with four other Barons of Exchequer; which Barons are to be made of serjeants at law, English barristers, or Scots advocates of five years standing. This court has a privative jurisdiction conferred upon it, as to the duties of customs, excise, or other revenues appertaining to the king or prince of Scotland, and as to all honours and estates that may accrue to the crown; in which matters, they are to judge by the forms of proceeding used in the English court of exchequer, under the following limitations; that no debt due to the crown shall affect the debtor's real estate in any other manner than such estate may be affected by the laws of Scotland, and that the validity of the crown's titles to any honours or lands shall continue to be tried by the court of session. The barons have the powers of the Scots court transferred to them, of passing the accounts of sheriffs, or other officers who have the execution of writs issuing from, or returnable to, the court of exchequer, and of receiving resignations, and passing signatures of charters, gifts of casualties, &c. But tho' all these must pass in exchequer, it is the court of session only who can judge of their preference after they are completed.

16. The jurisdiction of the admiral in maritime causes was of old concurrent with that of the session. The high-admiral is declared the king's justice general upon the seas, on fresh water within flood mark, and in all harbours and creeks. His civil jurisdiction extends to all maritime causes; and so comprehends questions of charter-parties, freights, salvages, bottomries, &c. He exercises this supreme jurisdiction by a delegate, the judge of the high court of admiralty; and he may also name inferior deputies, whose jurisdiction is limited to particular districts, and whose sentences are subject to the review of the high court. In causes which are declared to fall under the admiral's cognizance, his jurisdiction is sole; in so much, that the session itself, though it may review his decrees by suspension or reduction, cannot carry a maritime question from him by advocacy. The admiral has acquired, by usage, a jurisdiction in mercantile causes, even where they are not strictly maritime, cumulative with that of the judge-ordinary.

17. All our supreme courts have seals or signets, proper to their several jurisdictions. The courts of session and justiciary used formerly the same signet, which was called the king's, because the writs issuing from thence run in the king's name; and though the justiciary got at last a separate signet for itself, yet that of the session still retains the appellation of the *king's signet*. In this office are sealed summonses for citation, letters of executorial diligence, or for staying or prohibiting of dili-

Law of  
Scotland.

gence, and generally whatever passes by the warrant of the session, and is to be executed by the officers of the court. All these must, before sealing, be signed by the writers or clerks of the signet: But letters of diligence, where they are granted in a depending process, merely for probation, though they pass by the signet, must be subscribed by a clerk of session. The clerks of the signet also prepare and subscribe all signatures of charters, or other royal grants, which pass in exchequer.

clviii. SECT. III. *Of the inferior judges and courts of Scotland.*

Sheriff.

SHERIFF. (from *reeve*, governor, and *sheer* to cut or divide), is the judge-ordinary constituted by the crown over a particular division or county. The sheriff's jurisdiction, both civil and criminal, was, in ancient times, nearly as ample within his own territory as that of the supreme courts of session and justiciary was over the whole kingdom.

2. His civil jurisdiction now extends to all actions upon contracts, or other personal obligations; forthcomingings, poundings of the ground, mails and duties; and to all possessory actions, as removing, ejections, spuilzies, &c.; to all briefs issuing from the chancery, as of inquest, teice, division, tutory, &c.; and even to adjudications of land estates, when proceeding on the renunciation of the apparent heir. His present criminal jurisdiction extends to certain capital crimes, as theft, and even murder, though it be one of the pleas of the crown; and he is competent to most questions of public police, and has a cumulative jurisdiction with justices of the peace in all riots and breaches of the peace.

3. Sheriffs have a ministerial power, in virtue of which they return juries, in order to the trial of causes that require juries. The writs for electing members of parliament have been, since the union, directed to the sheriffs, who, after they are executed, return them to the crown-office from whence they issued. They also execute writs issuing from the court of exchequer; and in general, take care of all estates, duties, or casualties that fall to the crown within their territory, for which they must account to the exchequer.

Lord of regality.

4. A lord of regality was a magistrate who had a grant of lands from the sovereign, with royal jurisdiction annexed thereto. His civil jurisdiction was equal to that of a sheriff; his criminal extended to the four pleas of the crown. He had a right to repledge or reclaim all criminals, subject to his jurisdiction, from any other competent court, though it were the justiciary itself, to his own. He had also right, according to the most common opinion, to the single escheat of all denounced persons residing within his jurisdiction, even though such privilege had not been expressed in the grant of regality.

Stewart.

5. The steward was the magistrate appointed by the king over such regality lands as happened to fall to the crown by forfeiture, &c. and therefore the steward's jurisdiction was equal to that of a regality. The two stewardries of Kirkcudbright, and of Orkney and Zetland, make shires or counties by themselves, and send each a representative to parliament.

Baillie.

6. Where lands not erected into a regality fell into the king's hands, he appointed a baillie over them, whose jurisdiction was equal to that of a sheriff.

Law  
Scotland.

7. By the late jurisdiction-act, 20 Geo. II. all heritable regalities and baileries, and all such heritable sheriffships and stewardries as were only parts of a shire, are dissolved; and the powers formerly vested in them are made to devolve upon such of the king's courts as these powers would have belonged to if the jurisdictions dissolved had never been granted. All sheriffships and stewardries that were no part of a shire, where they had been granted, either heritably or for life, are resumed and annexed to the crown. No high sheriff or steward can hereafter judge personally in any cause. One sheriff or steward-depute is to be appointed by the king in every shire, who must be an advocate of three years standing; and whose office as sheriff or steward-depute is now by 28. Geo. II. held *ad vitam aut culpam*.

Prince  
Scotland.

8. The appanage, or patrimony, of the prince of Scotland, has been long erected into a regality-jurisdiction, called the Principality. It is personal to the king's eldest son, upon whose death or succession it returns to the crown. The prince has, or may have, his own chancery, from which his writs issue, and may name his own chamberlain and other officers for receiving and managing his revenue. The vassals of the prince are intitled to elect, or to be elected, members of parliament for counties, equally with those who hold of the crown.

9. Justices of the peace are magistrates named by the sovereign over the several counties of the kingdom, for the special purpose of preserving the public peace. Anciently their power reached little farther than to bind over disorderly persons for their appearance before the privy council or justiciary; afterwards they were authorized to judge in breaches of the peace, and in most of the laws concerning public policy. They may compel workmen or labourers to serve for a reasonable fee, and they can condemn masters in the wages due to their servants. They have power to judge in questions of highways, and to call out the tenants with their cottars and servants to perform six days work yearly for upholding them. It has been lately, however, found by the court of session, that justices have no jurisdiction whatever in common actions for debt. So that it now seems fixed, that they are incompetent in such actions, except where they are declared competent by special statute.

10. Since the union, our justices of the peace, over and above the powers committed to them by the laws of Scotland, are authorized to exercise whatever belonged to the office of an English justice, in relation to the public peace. From that time, the Scots and the English commissions have run in the same style, which contain powers to inquire into and judge in all capital crimes, witchcrafts, felonies, and several others specially enumerated; with this limitation subjoined, *of which justices of the peace may lawfully inquire*. Two justices can constitute a court. Special statute has given the cognizance of several matters of excise to the justices, in which their sentences are final. As to which, and the powers thereby vested in them, the reader must necessarily be referred to the excise laws; it not falling within the plan of this work, to enter into so very minute a detail as that would prove.

11. A borough is a body-corporate, made up of the inhabitants of a certain tract of ground erected by the sovereign, with jurisdiction annexed to it. Boroughs

roughs are erected, either to be holden of the sovereign himself, which is the general case of royal boroughs; or of the superior of the lands erected, as boroughs of regality and barony. Boroughs royal have power, by their charters, to choose annually certain office-bearers or magistrates; and in boroughs of regality and barony, the nomination of magistrates is, by their charter, lodged sometimes in the inhabitants, sometimes in the superior. Bailies of boroughs have jurisdiction in matters of debt, services, and questions of possession betwixt the inhabitants. Their criminal jurisdiction extends to petty riots, and reckless fire-raising. The dean of guild is that magistrate of a royal borough who is head of the merchant-company; he has the cognizance of mercantile causes within borough; and the inspection of buildings, that they encroach neither on private property, nor on the public streets; and he may direct insufficient houses to be pulled down. His jurisdiction has no dependence on the court of the borough, or bailie-court.

12. A baron, in the large sense of that word, is one who holds his lands immediately of the crown; and, as such, had, by our ancient constitution, right to a seat in parliament, however small his freehold might have been. The lesser barons were exempted from the burden of attending the service of parliament. This exemption grew insensibly into an utter disability in all the lesser barons from sitting in parliament, without election by the county; though no statute is to be found expressly excluding them.

13. To constitute a baron in the strict law-sense, his lands must have been erected, or at least confirmed, by the king, *in liberam baroniam*; and such baron had a certain jurisdiction, both civil and criminal, which he might have exercised, either in his own person, or by his bailie.

14. By the late jurisdiction-act, the civil jurisdiction of a baron is reduced to the power of recovering, from his vassals and tenants, the rents of his lands, and of condemning them in mill-services; and of judging in causes where the debt and damages do not exceed 40s. Sterling. His criminal jurisdiction is, by the same statute, limited to assaults, batteries, and other smaller offences, which may be punished by a fine not exceeding 20s. Sterling, or by setting the offender in the stocks in the day-time not above three hours; the fine to be levied by poinding, or one month's imprisonment. The jurisdiction formerly competent to proprietors of mines, and coal or salt works, over their workmen, is reserved; and also that which was competent to proprietors who had the right of fairs or markets, for correcting the disorders that might happen during their continuance; provided they shall exercise no jurisdiction inferring the loss of life or demeritation.

15. The high constable of Scotland had no fixed territorial jurisdiction, but followed the court; and had, jointly with the marshal, the cognizance of all crimes committed within two leagues of it. All other constabularies were dependent on him: these had castles, and sometimes boroughs, subject to their jurisdiction, as Dundee, Montrose, &c. and among other powers, now little known, they had the right of exercising criminal jurisdiction within their respective territories du-

ring the continuance of fairs. By the late jurisdiction-act, all jurisdictions of constabulary are dissolved, except that of high-constable.

16. The office of the Lyon King of arms was chiefly ministerial, to denounce war, proclaim peace, carry public messages, &c. But he has also a right of jurisdiction, whereby he can punish all who usurp arms contrary to the law of arms, and deprive or suspend messengers, heralds, or pursuivants, (who are officers named by himself); but he has no cognizance of the damage arising to the private party through the messenger's fault. Messengers are subservient to the supreme courts of session and judiciary; and their proper business is to execute all the king's letters either in civil or criminal causes. They must find caution for the proper discharge of their duty *qua* messengers; and in case of any malversation, or neglect, by which damage arises to their employers, their sureties may be required upon for indemnification. These sureties, however, are not answerable for the conduct of the messenger in any other capacity but *qua* such; and therefore, if a messenger is authorized to uplift payment from a debtor, and fails to account to his employer, the cautioner is not liable; his obligation extending only to the regular and proper duties of the office in executing the diligence, or the like.

17. Our judges had, for a long time, no other salaries or appointments than what arose from the sentences they pronounced. Our criminal judges applied to their own use the fines or issues of their several courts; and regalities had a right to the single escheat of all persons denounced, who resided within their jurisdiction; and our civil judges got a certain proportion of the sum contained in the decree pronounced. But these were all prohibited upon regular salaries being settled upon them.

#### SECT. V. *Of ecclesiastical persons.*

THE Pope, or bishop of Rome, was long acknowledged, over the western part of Christendom, for the head of the Christian church. The papal jurisdiction was abolished in Scotland *anno* 1560. The king was, by act 1669, declared to have supreme authority over all persons, and in all causes ecclesiastical; but this act was repealed by 1690, as inconsistent with Presbyterian church-government, which was then upon the point of being established.

2. Before the reformation from Popery, the clergy was divided into secular and regular. The secular had a particular tract of ground given them in charge, within which they exercised the pastoral office of bishop, presbyter, or other church-officer. The regular clergy had no cure of souls; but were tied down to residence in their abbacies, priories, or other monasteries; and they got the name of *regular*, from the rules of mortification to which they were bound, according to the institution of their several orders. Upon the vacancy of any benefice, whether secular or regular, commendators were frequently appointed to levy the fruits, as factors or stewards during the vacancy. The Pope alone could give the higher benefices *in commendam*; and at last, from the plenitude of his power, he came to name commendators for life, and without any obli-

gation to account. After the reformation, several abacies and priories were given by James VI. in *perpetuam commendam*, to laics.

3. Upon abolishing the Pope's authority, the regular clergy were totally suppressed; and, in place of all the different degrees which distinguished the secular clergy, we had at first only parochial presbyters or ministers, and superintendants, who had the oversight of the church within a certain district: soon thereafter the church-government became episcopal by archbishops, bishops, &c.; and after some intermediate turns, is now presbyterian by kirk-sessions, presbyteries, synods, and general assemblies.

4. Prelate, in our statutes, signifies a bishop, abbot, or other dignified clergyman, who in virtue of his office had a seat in parliament. Every bishop had his chapter, which consisted of a certain number of the ministers of the diocese, by whose assistance he managed the affairs of the church within that district. The nomination of bishops to vacant sees has been in the crown since 1540, though under the appearance of continuing the ancient right of election, which was in the chapter. The confirmation by the crown under the great seal, of the chapter's election, conferred a right to the spirituality of the benefice; and a second grant, upon the consecration of the bishop-elect, gave a title to the temporality; but this second grant fell soon into disuse.

Patronage.

5. He who founded or endowed a church was intitled to the right of patronage thereof, or *advocatio ecclesie*; whereby, among other privileges, he might present a churchman to the cure, in case of a vacancy. The presentee, after he was received into the church, had a right to the benefice *proprio jure*; and if the church was parochial, he was called a *parson*. The Pope claimed the right of patronage of every kirk to which no third party could shew a special title; and, since the reformation, the crown, as coming in place of the Pope, is considered as universal patron, where no right of patronage appears in a subject. Where two churches are united, which had different patrons, each patron presents by turns.

6. Gentlemen of estates frequently founded colleges or collegiate churches; the head of which got the name of *provost*, under whom were certain prebendaries, or canons, who had their several stalls in the church, where they sung masses. Others of lesser fortunes founded chaplainries, which were donations granted for the singing of masses for deceased friends at particular altars in a church. Though all these were suppressed upon the reformation, their founders continued patrons of the endowments; out of which they were allowed to provide bursars, to be educated in any of the universities.

7. Where a fund is gifted for the establishment of a second minister in a parish where the cure is thought too heavy for one, the patronage of such benefice does not belong to the donor, but to him who was patron of the church, unless either where the donor has reserved to himself the right of patronage in the donation, or where he and his successors have been in the constant use of presenting the second minister, without challenge from the patron. The right of presenting incumbents was by 1690, c. 23. taken from patrons, and vested in the heritors and elders of the parish, upon

payment to be made by the heritors to the patron of 600 merks; but it was again restored to patrons, 10 An. c. 12. with the exception of the presentation sold in pursuance of the former act.

8. Patrons were not simply administrators of the church; for they held the fruits of the vacant benefice as their own, for some time after the reformation. But that right is now no more than a trust in the patron, who must apply them to pious uses within the parish, at the sight of the heritors, yearly as they fall due. If he fail, he loses his right of administering the vacant stipend for that and the next vacancy. The king, who is exempted from this rule, may apply the vacant stipend of his churches to any pious use, though not within the parish. If one should be ordained to a church, in opposition to the presentee, the patron, whose civil right cannot be affected by any sentence of a church-court, may retain the stipend as vacant. Patrons are to this day intitled to a seat and burial-place in the churches of which they are patrons, and to the right of all the teinds of the parish not heritably disposed.

9. That kirks may not continue too long vacant, the patron must present to the presbytery (formerly to the bishop), a fit person for supplying the cure, within six months from his knowledge of the vacancy, otherwise the right of presentation accrues to the presbytery *jure devoluto*. Upon presentation by the patron, the bishop collated or conferred the benefice upon the presentee by a writing, in which he appointed certain ministers of the diocese to induce or institute him into the church; which induction completed his right, and was performed by their placing him in the pulpit, and delivering to him the bible and keys of the church. The bishop collated to the churches of which himself was patron, *pleno jure*, or without presentation; which he also did in menial churches, whose patronages were sunk, by the churches being appropriated to him, as part of his patrimony. Since the revolution, a judicial act of admission by the presbytery, proceeding either upon a presentation, or upon a call from the heritors and elders, or upon their own *jus devolutum*, completes the minister's right to the benefice.

10. Soon after the reformation, the Popish churchmen were prevailed upon to resign in the sovereign's hands a third of their benefices; which was appropriated, in the first place, for the subsistence of the reformed clergy. To make this fund effectual, particular localities were assigned in every benefice, to the extent of a third, called the *assumption of thirds*; and for the farther support of ministers, Queen Mary made a grant in their favour of all the small benefices not exceeding 300 merks. Bishops, by the act which restored them to the whole of their benefices, were obliged to maintain the ministers within their dioceses, out of the thirds; and in like manner, the laic titulars, who got grants of the thirds, became bound, by their acceptance thereof, to provide the kirks within their erections in competent stipends.

11. But all those expedients for the maintenance of the clergy having proved ineffectual, a commission of parliament was appointed in the reign of James VI. for planting kirks, and modifying stipends to ministers out of the thirds; and afterwards several other commissions were appointed, with the more ample powers

of

of dividing large parishes, erecting new ones, &c. all of which were, in 1707, transferred to the court of session, with this limitation, that no parish should be disjoined, nor new church erected, nor 1d one removed to a new place, without the consent of three-fourths of the heritors, computing the votes, not by their numbers, but by the valuation of their rents within the parish. The judges of session, when sitting in that court, are considered as a commission of parliament, and have their proper clerks, macers, and other officers of court, as such.

12. The lowest stipend that could be modified to a minister by the first commission, was 500 merks, or five chalders of victual, unless where the whole teinds of the parish did not extend so far: and the highest was 1000 merks, or ten chalders. The parliament 1633 raised the *minimum* to eight chalders of victual, and proportionably in silver; but as neither the commission appointed by that act, nor any of the subsequent ones, was limited as to the *maximum*, the commissioners have been in use to augment stipends considerably above the old *maximum*, where there is sufficiency of free teinds, and the cure is burdensome, or living expensive.

13. Where a certain quantity of stipend is modified to a minister out of the teinds of a parish, without proportioning that stipend among the several heritors, the decree is called a *decree of modification*: but where the commissioners also fix the particular proportions payable by each heritor, it is a decree of *modification and locality*. Where a stipend is only modified, it is secured on the whole teinds of the parish, so that the minister can insist against any one heritor to the full extent of his teinds; such heritor being always intitled to relief against the rest for what he shall have paid above his just share: but where the stipend is also localled, each heritor is liable in no more than his own proportion.

14. Few of the reformed ministers were, at first, provided with dwelling houses; most of the Popish clergy having, upon the first appearance of the reformation, let their manse in feu, or in long tacks: ministers therefore got a right, in 1563, to as much of these manses as would serve them, notwithstanding such feus or tacks. Where there was no parson's nor vicar's manse, one was to be built by the heritors, at the sight of the bishop, (now the presbytery), the charge not exceeding L. 1000 Scots, nor below 500 merks. Under a manse are comprehended stable, barn, and byre, with a garden; for all which it is usual to allow half an acre of ground.

15. Every incumbent is intitled at his entry to have his manse put in good condition; for which purpose, the presbytery may appoint a visitation by tradesmen, and order estimates to be laid before them of the sums necessary for the repairing, which they may proportion among the heritors according to their valuations. The presbytery, after the manse is made sufficient, ought, upon application of the heritors, to declare it a free manse; which lays the incumbent under an obligation to uphold it in good condition during his incumbency, otherwise he or his executors shall be liable in damages; but they are not bound to make up the loss arising from the necessary decay of the building by the waste of time.

16. All ministers, where there is any landward or country parish, are, over and above their stipend, intitled to a glebe, which comprehends four acres of arable land, or sixteen fowms of pasture-ground where there is no arable land (a fowm is what will graze ten sheep or one cow); and it is to be designed or marked by the bishop or presbytery out of such kirklands within the parish as lie nearest to the kirk, and, in default of kirklands, out of temporal lands.

17. A right of relief is competent to the heritors, whose lands are set off for the manse or glebe, against the other heritors of the parish. Manses and glebes, being once regularly designed, cannot be feued or sold by the incumbent in prejudice of his successors, which is in practice extended even to the case where such alienation evidently appears profitable to the benefice.

18. Ministers, beside their glebe, are intitled to grafs for a horse and two cows. And if the lands, out of which the grafs may be designed, either lie at a distance, or are not fit for pasture, the heritors are to pay to the minister L. 20 Scots yearly as an equivalent. Ministers have also freedom of foggage, pasturage, fuel, seal, divot, loaning, and free ish and entry, according to use and wont; but what these privileges are, must be determined by the local custom of the several parishes.

19. The legal terms at which stipends become due to ministers are Whitsunday and Michaelmas. If the incumbent be admitted to his church before Whitsunday (till which term the corns are not presumed to be fully sown), he has right to that whole year's stipend; and, if he is received after Whitsunday, and before Michaelmas, he is intitled to the half of that year; because, though the corns were sown before his entry, he was admitted before the term at which they are presumed to be reaped. By the same reason, if he dies or is transported before Whitsunday, he has right to no part of that year; if before Michaelmas, to the half; and if not till after Michaelmas, to the whole.

20. After the minister's death, his executors have right to the annat; which, in the sense of the canon law, was a right reserved to the Pope, of the first year's fruits of every benefice. Upon a threatened invasion from England *anno* 1547, the annat was given by our parliament, notwithstanding this right in the Pope, to the executors of such churchmen as should fall in battle in defence of their country: but the word *annat* or *ann*, as it is now understood, is the right which law gives to the executors of ministers, of half a year's benefice over and above what was due to the minister himself for his incumbency.

21. The executors of a minister need make up no title to the ann by continuation: neither is the right assignable by the minister, or affectable with his debts; for it never belonged to him, but is a mere gratuity given by law to those whom it is presumed the deceased could not sufficiently provide; and law has given it expressly to *executors*: and if it were to be governed by the rules of succession in executory, the widow, in case of no children, would get one half, the other would go to the next of kin; and where there are children, she would be intitled to a third, and the other two thirds would fall equally among the children. But the court of session, probably led by the general practice,

Law of Scotland.  
Glebe, and

G. 4th.  
Terms of payment of stipends.

Annat or ann.

practice, have in this last case divided the ann into two equal parts, of which one goes to the widow, and the other among the children *in capita*.

22. From the great confidence that was, in the first ages of Christianity, reposed in churchmen, dying persons frequently committed to them the care of their estates, and of their orphan children; but these were simply rights of trust, not of jurisdiction. The clergy soon had the address to establish to themselves a proper jurisdiction, not confined to points of ecclesiastical right, but extending to questions that had no concern with the church. They judged not only in teinds, patronages, testaments, breach of vow, scandal, &c. but in questions of marriage and divorce, because marriage was a sacrament; in tochers, because these were given in consideration of marriage; in all questions where an oath intervened, on pretence that oaths were a part of religious worship, &c. As churchmen came, by the means of this extensive jurisdiction, to be diverted from their proper functions, they committed the exercise of it to their officials or commissaries: hence the commissary-court was called the *Bishop's Court*, and *Curia Christianitatis*; it was also stiled the *Consistorial Court*; from *consistory*, a name first given to the court of appeals of the Roman emperors, and afterwards to the courts of judicature held by churchmen.

23. At the reformation, all episcopal jurisdiction, exercised under the authority of the bishop of Rome, was abolished. As the course of justice in consistorial causes was thereby stopped, Q. Mary, besides naming a commissary for every diocese, did, by a special grant, establish a new commissary-court at Edinburgh, consisting of four judges or commissaries. This court is vested with a double jurisdiction; one diocesan, which is exercised in the special territory contained in the grant, *viz.* the counties of Edinburgh, Haddington, Linlithgow, Peebles, and a great part of Stirlingshire; and another universal, by which the judges confirm the testaments of all who die in foreign parts, and may reduce the decrees of all inferior commissaries, provided the reduction be pursued within a year after the decree. Bishops, upon their re-establishment in the reign of James VI. were restored to the right of naming their several commissaries.

24. As the clergy, in times of Popery, assumed a jurisdiction independent of the civil power or any secular court, their sentences could be reviewed only by the Pope, or judges delegated by him; so that, with regard to the courts of Scotland, their jurisdiction was supreme. But, by an act 1560, the appeals from our bishops courts, that were then depending before the Roman consistories, were ordained to be decided by the court of session: and by a posterior act, 1609, the session is declared the king's great consistory, with power to review all sentences pronounced by the commissaries. Nevertheless, since that court had no inherent jurisdiction in consistorial causes prior to this statute, and since the statute gives them a power of judging only by way of advocacy, they have not, to this day, any proper consistorial jurisdiction in the first instance; neither do they pronounce sentence in any consistorial cause brought from the commissaries, but remit it back to them with instructions. By the practice immediately subsequent to the act before quoted,

they did not admit advocations from the inferior commissaries, till the cause was first brought before the commissaries of Edinburgh; but that practice is now in disuse.

25. The commissaries retain to this day an exclusive power of judging in declarators of marriage, and of the nullity of marriage; in actions of divorce and of non-adherence, of adultery, bastardy, and confirmation of testaments; because all these matters are still considered to be properly consistorial. Inferior commissaries are not competent to questions of divorce, under which are comprehended questions of bastardy and adherence, when they have a connection with the lawfulness of marriage, or with adultery.

26. Commissaries have now no power to pronounce decrees in absence for any sum above L. 40 Scots, except in causes properly consistorial: but they may authenticate tutorial and curatorial inventories; and all bonds, contracts, &c. which contain a clause for registration in the books of any judge competent, and protests on bills, may be registered in their books.

#### SECT. VI. *Of marriage.*

PERSONS, when considered in a private capacity, are chiefly distinguished by their mutual relations; as husband and wife, tutor and minor, father and child, master and servant. The relation of husband and wife is constituted by marriage; which is the conjunction of man and wife, vowing to live inseparably till death.

2. Marriage is truly a contract, and so requires the consent of parties. Idiots, therefore, and furious persons, cannot marry. As no person is presumed capable of consent within the years of pupillarity, which, by our law, lasts till the age of 14 in males, and 12 in females, marriage cannot be contracted by pupils; but if the married pair shall cohabit after puberty, such acquiescence gives force to the marriage. Marriage is fully perfected by consent; which, without consummation, founds all the conjugal rights and duties. The consent requisite to marriage must be *de presenti*. A promise of marriage (*stipulatio sponsalitia*) may be refiled from, as long as matters are entire; but if any thing be done by one of the parties, whereby a prejudice arises from the non-performance, the party refiled is liable in damages to the other. The canonists, and after them our courts of justice, explain a *copula* subsequent to a promise of marriage into actual marriage.

3. It is not necessary, that marriage should be celebrated by a clergyman. The consent of parties may be declared before any magistrate, or simply before witnesses: and though no formal consent should appear, marriage is presumed from the cohabitation, or living together at bed and board, of a man and woman who are generally reputed husband and wife. One's acknowledgment of his marriage to the midwife whom he called to his wife, and to the minister who baptized his child, was found sufficient presumptive evidence of marriage, without the aid either of cohabitation, or of *habite and repute*. The father's consent was, by the Roman law, essential to the marriage of children *in familia*: but, by our law, children may enter into marriage, without the knowledge, and even against the remonstrances, of a father.

4. Marriage is forbidden within certain degrees of blood. By the law of Moses (*Leviticus xviii.*), which, by the act 1567. c. 15. has been adopted by us, seconds in blood, and all remoter degrees, may all lawfully marry. By seconds in blood are meant first cousins. Marriage in the direct line is forbidden *in infinitum*; as it is also in the collateral line in the special case where one of the parties is *loco parentis* to the other, as grand-uncle, great grand-uncle, &c. with respect to his grand niece, &c. The same degrees that are prohibited in consanguinity, are prohibited in affinity; which is the tie arising from marriage, betwixt one of the married pair, and the blood relations of the other. Marriage also, where either of the parties is naturally unfit for generation, or stands already married to a third person, is *ipso jure* null.

5. To prevent bigamy and incestuous marriages, the church has introduced proclamation of banns; which is the ceremony of publishing the names and designations of those who intend to intermarry, in the churches where the bride and bridegroom reside, after the congregation is assembled for divine service; that all persons who know any objection to the marriage may offer it. When the order of the church is observed, the marriage is called *regular*; when otherwise, *clandestine*. Marriage is valid when entered into in either of these ways; but when clandestine, there are certain penalties imposed upon the parties as well as the celebrator and witnesses.

6. By marriage, a society is created between the married pair, which draws after it a mutual communication of their civil interests, in as far as is necessary for maintaining it. As the society lasts only for the joint lives of the *foetii*; therefore rights that have the nature of a perpetuity, which our law styles *heritable*, are not brought under the partnership or communion of goods; as a land-estate, or bonds bearing a yearly interest: it is only moveable subjects, or the fruits produced by heritable subjects during the marriage, that become common to man and wife.

7. The husband, as the head of the wife, has the sole right of managing the goods in communion, which is called *jus mariti*. This right is so absolute, that it bears but little resemblance to a right of administering a common subject. For the husband can, in virtue thereof, sell, or even gift, at his pleasure, the whole goods falling under communion; and his creditors may affect them for the payment of his proper debts: so that the *jus mariti* carries all the characters of an assignation, by the wife to her husband, of her moveable estate. It arises *ipso jure* from the marriage; and therefore needs no other constitution. But a stranger may convey an estate to a wife, so as it shall not be subject to the husband's administration; or the husband himself may, in the marriage-contract, renounce his *jus mariti* in all or any part of his wife's moveable estate.

8. From this right are excepted paraphernal goods, which, as the word is understood in our law, comprehends the wife's wearing apparel, and the ornaments proper to her person; as necklaces, ear-rings, breast or arm jewels, buckles, &c. These are neither alienable by the husband, nor affectable by his creditors. Things of promiscuous use to husband and wife, as plate, medals, &c. may become paraphernal, by the

husband's giving them to the wife, at or before marriage; but they are paraphernal only in regard to that husband who gave them as such, and are esteemed common moveables, if the wife, whose *paraphernalia* they were, be afterwards married to a second husband; unless he shall in the same manner appropriate them to her.

9. The right of the husband to the wife's moveable estate, is burdened with the moveable debts contracted by her before marriage: and as his right is universal, so also is his burden; for it reaches to her whole moveable debts, though they should far exceed her moveable estate. Yet the husband is not considered as the true debtor in his wife's debts. In all actions for payment, she is the proper defender: the husband is only cited for his interest, that is, as curator to her, and administrator of the society-goods. As soon therefore as the marriage is dissolved, and the society goods thereby suffer a division, the husband is no farther concerned in the share belonging to his deceased wife; and consequently is no longer liable to pay her debts, which must be recovered from her representatives, or her separate estate.

10. This obligation upon the husband is, however, perpetuated against him (1.) Where his proper estate, real or personal, has been affected, during the marriage, by complete legal diligence; in which case, the husband must, by the common rules of law, relieve his property from the burden with which it stands charged: but the utmost diligence against his person is not sufficient to perpetuate the obligation; nor even incomplete diligence against his estate. (2.) The husband continues liable, even after the wife's death, in so far as he is *lucratu*s or profited by her estate: Still, however, the law does not consider a husband who has got but a moderate tocher with the wife as *lucratu*s by the marriage; it is the excess only which it considers as *lucrum*, and that must be estimated by the quality of the parties and their condition of life.—As he was at no time the proper debtor in his wife's moveable debts; therefore, though he should be *lucratu*s, he is, after the dissolution, only liable for them *subsidiariè*, i. e. if her own separate estate is not sufficient to pay them off.

11. Where the wife is debtor in that sort of debt, which, if it had been due to her, would have excluded the *jus mariti*, e. g. in bonds bearing interest, which, as we shall afterwards see (clxiii. 4.), continues heritable as to the rights of husband and wife, notwithstanding of the enactment of the statute 1661, which renders them moveable in certain other respects, the husband is liable only for the bygone interests, and those that may grow upon the debt during the marriage: because his obligation for her debts must be commensurated to the interest he has in her estate. It is the husband alone who is liable in personal diligence for his wife's debts, while the marriage subsists: the wife, who is the proper debtor, is free from all personal execution upon them while she is *vestita viri*.

12. The husband by marriage becomes the perpetual curator of the wife. From this right it arises, 1. That no suit can proceed against the wife till the husband be cited for his interest. 2. All deeds, done by a wife without the husband's consent, are null; neither can she sue in any action without the husband's

Burdens affecting the *jus mariti*.

How extended against the husband.

The husband is the wife's curator.

Law of Scotland.

concurrence. Yet where the husband refuses, or by reason of forfeiture, &c. cannot concur; or where the action is to be brought against the husband himself, for performing his part of the marriage articles; the judge will authorise her to sue in her own name. The effects arising from this curatorial power discover themselves even before marriage, upon the publication of banns; after which the bride, being no longer *fui juris*, can contract no debt, nor do any deed, either to the prejudice of her future husband, nor even to her own. But in order to this, it is necessary that the banns shall have been published in the bride's parish-church as well as in that of her husband.

Separate alimony.

13. If the husband should either withdraw from his wife, or turn her out of doors; or if, continuing in family with her, he should by severe treatment endanger her life; the commissaries will authorise a separation *a mensa et thoro*, and give a separate alimony to the wife, suitable to her husband's estate, from the time of such separation until either a reconciliation or a sentence of divorce.

What obligations of the wife are valid.

14. Certain obligations of the wife are valid, notwithstanding her being *sub cura mariti*; *ex. gr.* obligations arising from delict; for wives have no privilege to commit crimes. But if the punishment resolves into a pecuniary mulct, the execution of it must, from her incapacity to fulfil, be suspended till the dissolution of the marriage, unless the wife has a separate estate exempted from the *ius mariti*.

15. Obligations arising from contract, affect either the person or the estate. The law has been so careful to protect wives while *sub cura marita*, that all personal obligations granted by a wife, though with the husband's consent, as bonds, bills, &c. are null; with the following exceptions: (1.) Where the wife gets a separate *peculium* or stock, either from her father or a stranger, for her own or her children's alimony, she may grant personal obligations in relation to such stock: and by stronger reason, personal obligations granted by a wife are good, when her person is actually withdrawn from the husband's power by a judicial separation. (2.) A wife's personal obligation, granted in the form of a deed *inter vivos*, is valid, if it is not to take effect till her death. (3.) Where the wife is by the husband *præposita negotiis*, intrusted with the management either of a particular branch of business or of his whole affairs, all the contracts she enters into in the exercise of her *præpositura* are effectual, even though they be not reduced to writing, but should arise merely *ex re*, from furnishings made to her: but such obligations have no force against the wife; it is the husband only, by whose commission she acts, who is thereby obliged.

16. A wife, while she remains in family with her husband, is considered as *præposita negotiis domesticis*; and consequently may provide things proper for the family; for the price whereof the husband is liable, tho' they should be misapplied, or though the husband should have given her money to provide them elsewhere. A husband who suspects that his wife may hurt his fortune by high living, may use the remedy of inhibition against her; by which all persons are interpellated from contracting with her, or giving her credit. After the completing of this diligence, whereby the *præpositura* falls, the wife cannot bind the husband, un-

Inhibition against a wife.

less for such reasonable furnishings as he cannot instruct that he provided her with *alimunde*. As every man, and consequently every husband, has a right to remove his managers at pleasure, inhibition may pass at the suit of the husband against the wife, though he should not offer to justify that measure by an actual proof of the extravagance or profusion of her temper.

Law of Scotland.

17. As to rights granted by the wife affecting her estate; she has no moveable estate, except her *paraphernalia*; and these she may alien or impignorate, with consent of the husband. She can, without the husband, bequeath by testament her share of the goods in communion; but she cannot dispose of them *inter vivos*; for she herself has no proper right to them while the marriage subsists. A wife can lawfully oblige herself, in relation to her heritable estate, with consent of her husband: for though her person is in some sense sunk by the marriage, she continues capable of holding a real estate; and in such obligations her estate is considered, and not her person. A husband, though he be curator to his wife, can, by his acceptance or intervention, authorise rights granted by her in his own favour: for a husband's curatory differs in this respect from the curatory of minors, for it is not merely intended for the wife's advantage, but is considered as a mutual benefit to both.

18. All donations, whether by the wife to the husband, or by the husband to the wife, are revocable by the donor; but if the donor dies without revocation, the right becomes absolute. Where the donation is not pure, it is not subject to revocation: thus, a grant made by the husband, in consequence of the natural obligation that lies upon him to provide for his wife, is not revocable, unless in so far as it exceeds the measure of a rational settlement; neither are remuneratory grants revocable, where mutual grants are made in consideration of each other, except where an onerous cause is simulated, or where what is given *hinc inde* bears no proportion to each other. All voluntary contracts of separation, by which the wife is provided in an yearly alimony, are effectual as to the time past, but revocable either by the husband or wife.

Donation revocable and irrevocable.

19. As wives are in the strongest degree subject to the influence of their husbands, third parties, in whose favours they had made grants, were frequently vexed with actions of reduction, as if the grant had been extorted from the wife through the force or fear of the husband. To secure the grantees against this danger, ratifications were introduced, whereby the wife, appearing before a judge, declares upon oath, her husband not present, that she was not induced to grant the deed *ex vi aut metu*. A wife's ratification is not absolutely necessary for securing the grantee: law indeed allows the wife to bring reduction of any deed she has not ratified, upon the head of force or fear; of which, if she bring sufficient evidence, the deed will be set aside; but if she fails in the proof, it will remain effectual to the receiver.

Ratification by wives.

20. Marriage, like other contracts, might, by the Roman law, be dissolved by the contrary consent of married parties; but, by the law of Scotland, it cannot be dissolved till death, except by divorce, proceeding either upon the head of adultery or of wilful desertion.

Dissolution of marriage.

21. Marriage is dissolved by death, either *within* year and day from its being contracted, or *after* year and

Law of Scotland.

and day. If it is dissolved within year and day, all rights granted in consideration of the marriage (unless guarded against in the contract) become void, and things return to the same condition in which they stood before the marriage; with this restriction, that the husband is considered as a *bona fide* possessor, in relation to what he has consumed upon the faith of his right; but he is liable to repay the tocher, without any deduction, in consideration of his family-expence during the marriage. If things cannot be restored on both sides, equity hinders the restoring of one party and not the other. In a case which was lately before the court of session, it was determined, after a long hearing in presence, that where a marriage had been dissolved within the year without a living child, by the death of the husband, the widow was intitled to be alimented out of an estate of which he died possessed, though there were no conventional provisions stipulated in favour of the wife.

22. Upon the dissolution of a marriage, after year and day, the surviving husband becomes the irrevocable proprietor of the tocher; and the wife, where the survives, is intitled to her jointure, or to her legal provisions. She has also right to mournings, suitable to the husband's quality; and to alimony from the day of his death till the term at which her life rent provision, either legal or conventional, commences. If a living child be procreated of the marriage, the marriage has the same effect as if it had subsisted beyond the year. A day is adjected to the year, *in majorem evidentiam*, that it may clearly appear that the year itself is elapsed; and therefore, the running of any part of the day, after the year, has the same effect as if the whole were elapsed. The legal right of courtesy competent to the surviving husband is explained below, N<sup>o</sup> clxx. 28.

23. Divorce is such a separation of married persons, during their lives, as looses them from the nuptial tie, and leaves them at freedom to intermarry with others. But neither adultery, nor wilful desertion, are grounds which must necessarily dissolve marriage; they are only handles, which the injured party may take hold of to be free. Cohabitation, therefore, by the injured party, after being in the knowledge of the acts of adultery, implies a passing from the injury; and no divorce can proceed, which is carried on by collusion betwixt the parties, lest, contrary to the first institution of marriage, they might disengage themselves by their own consent: and though, after divorce, the guilty person, as well as the innocent, may contract second marriages; yet, in the case of divorce upon adultery, marriage is by special statute (1600 c. 20.) prohibited betwixt the two adulterers.

24. Where either party has deserted from the other for four years together, that other may sue for adherence. If this has no effect, the church is to proceed, first by admonition, then by excommunication; all which previous steps are declared to be a sufficient ground for pursuing a divorce. *De praxi*, the commissaries pronounce sentence in the adherence, after one year's desertion; but four years must intervene between the first desertion and the decree of divorce.

25. The legal effects of divorce on the head of desertion are, that the offending husband shall restore the tocher, and forfeit to the wife all her provisions, legal

and conventional; and, on the other hand, the offending wife shall forfeit to the husband her tocher, and all the rights that would have belonged to her in the case of her survival. This was also esteemed the rule in divorces upon adultery. But by a decision of the court of session 1662, founded on a tract of ancient decisions recovered from the records, the offending husband was allowed to retain the tocher.

SECT. VII. *Of Minors, and their tutors and curators.* cxi. i

1. THE stages of life principally distinguished in law are, *pupillarity*, *puberty* or *minority*, and *majority*. A child is under pupillarity, from the birth to 14 years of age if a male, and till 12 if a female. Minority begins where pupillarity ends, and continues till majority; which, by the law of Scotland, is the age of 21 years complete, both in males and females: but minority, in a large sense, includes all under age, whether pupils or *puberes*. Because pupils cannot in any degree act for themselves, and minors seldom with discretion, pupils are put by law under the power of tutors, and minors may put themselves under the direction of curators. Tutory is a power and faculty to govern the person, and administer the estate, of a pupil. Tutors are either *nominate*, *of law*, or *dativæ*.

Pupillarity, &c.

Tutors

2. A tutor nominate is he who is named by a father, in his testament or other writing, to a lawful child. Such tutor is not obliged to give caution for the faithful discharge of his office; because his fidelity is presumed to have been sufficiently known to the father.

3. If there be no nomination by the father, or if the tutors nominate do not accept, or if the nomination falls by death or otherwise, there is place for a *tutor of law*. This sort of tutory devolves upon the next agnate; by which we understand he who is nearest related by the father, though females intervene.

Agnates

4. Where there are two or more agnates equally near to the pupil, he who is intitled to the pupil's legal succession falls to be preferred to the others. But as the law suspects that he may not be over careful to preserve a life which stands in the way of his own interest, this sort of tutor is excluded from the custody of the pupil's person; which is commonly committed to the mother, while a widow, until the pupil be seven years old; and, in default of the mother, to the next cognate, i. e. the nearest relation by the mother. The tutor of law must (by act 1474) be at least 25 years of age. He is served or declared by a jury of sworn men, who are called upon a brief issuing from the chancery, which is directed to any judge having jurisdiction. He must give security before he enters upon the management.

5. If no tutor of law demands the office, any person, even a stranger, may apply for a *tutory-dative*. But because a tutor in law ought to be allowed a competent time to deliberate whether he will serve or not, no *tutory-dative* can be given till the expiration of a year from the time at which the tutor of law had first a right to serve. It is the king alone, as the father of his country, who gives *tutory-dative*, by his court of exchequer; and by act 1672, no gift of tutory can pass in exchequer, without the citation or consent of

Law of  
Scotland.

the next of kin to the pupil, both by the father and mother, nor till the tutor give security, recorded in the books of exchequer. There is no room for a tutor of law, or tutor-dative, while a tutor-nominate can be hoped for: and tutors of law, or dative, even after they have begun to act, may be excluded by the tutor-nominate, as soon as he offers to accept, unless he has expressly renounced the office. If a pupil be without tutors of any kind, the court of session will, at the suit of any kinsman, name a factor (steward) for the management of the pupil's estate.

Judicial  
factor.

Curators.

6. After the years of pupillarity are over, the minor is considered as capable of acting by himself, if he has confidence enough of his own capacity and prudence. The only two cases in which curators are imposed upon minors are, (1.) Where they are named by the father, in a state of health. (2.) Where the father is himself alive; for a father is *ipso jure*, without any service, administrator, that is, both tutor and curator of law, to his children, in relation to whatever estate may fall to them during their minority. This right in the father does not extend to grandchildren, nor to such even of his immediate children as are forisfamiliarized. Neither has it place in subjects which are left by a stranger to the minor, exclusive of the father's administration. If the minor chooses to be under the direction of curators, he must raise and execute a summons, citing at least two of his next of kin to appear before his own judge-ordinary, upon nine days warning (by act 1555.) At the day and place of appearance, he offers to the judge a list of those whom he intends for his curators: such of them as resolve to undertake the office must sign their acceptance, and give caution; upon which an act of curatory is extracted.

7. These curators are styled *ad negotia*; to distinguish them from another sort called curators *ad lites*, who are authorized by the judge to concur with a pupil or minor in actions of law, either where he is without tutors and curators, or where his tutors and curators are parties to the suit. This sort is not obliged to give caution, because they have no intermeddling with the minor's estate: they are appointed for a special purpose; and when that is over, their office is at an end. Women are capable of being tutors and curators, under the following restrictions: (1.) The office of a female tutor or curator falls by her marriage, even though the nomination should provide otherwise; for she is no longer *fui juris*, and incapable of course of having another under her power. (2.) No woman can be tutor of law. Papists are (by act 1700) declared incapable of tutory or curatory. Where the minor has more tutors and curators than one, who are called in the nomination to the *joint* management, they must *all* concur in every act of administration; where a certain number is named for a quorum, *that number* must concur: where any one is named *sine quo non*, no act is valid without that one's special concurrence. But if they are named without any of these limitations, the concurrence of *the majority* of the nominees then alive is sufficient.

Who de-  
barred from  
tutory and  
curatory.

Difference  
between tu-  
tory and  
curatory.

8. In this, tutory differs from curatory, that as pupils are incapable of consent, they have no person capable of acting; which defect the tutor supplies: but a minor *pubes* can act for himself. Hence, the tutor

subscribes alone all deeds of administration: but in curatory, it is the minor who subscribes as the proper party; the curator does no more than consent. Hence also, the persons of pupils are under the power either of their tutors or of their nearest cognates; but the minor, after pupillarity, has the disposal of his own person, and may reside where he pleases. In most other particulars, the nature, the powers, and the duties of the two offices coincide. Both tutors and curators must, previous to their administration, make a judicial inventory, subscribed by them and the next of kin, before the minor's judge-ordinary, of his whole estate personal and real; of which, one subscribed duplicate is to be kept by the tutors or curators themselves; another, by the next of kin on the father's side; and a third, by the next of kin on the mother's. If any estate belonging to the minor shall afterwards come to their knowledge, they must add it to the inventory within two months after their attaining possession thereof. Should they neglect this, the minor's debtors are not obliged to make payment to them: they may be removed from their offices as suspected; and they are intitled to no allowance for the sums disbursed by them in the minor's affairs (act 1672), except the expence laid out upon the minor's entertainment, upon his lands and houses, and upon completing his titles.

Power  
tutors  
curator

9. Tutors and curators cannot grant leases of the minor's lands, to endure longer than their own office; nor under the former rental, without either a warrant from the court of session, or some apparent necessity.

10. They have power to sell the minor's moveables; but cannot sell their pupil's land-estate, without the authority of a judge, yet this restraint reaches not to such alienations as the pupil could by law be compelled to grant, *e. g.* to renunciations of wadsets upon redemption by the reverser; for in such case, the very tenor of his own right lays him under the obligation; nor to the renewal of charters to heirs; but the charter must contain no new right in favour of the heir. The alienation, however, of heritage by a minor, with consent of his curators, is valid.

11. Tutors and curators cannot, contrary to the nature of their trust, authorize the minor to do any deed for their own benefit; nor can they acquire any debt affecting the minor's estate: and, where a tutor or curator makes such acquisition, in his own name, for a less sum than the right is intitled to draw, the benefit thereof accrues to the minor. It seems, however, that such purchase would be considered as valid, provided it were *bona fide* acquired at a public sale; for in such case it occurs that the tutor or curator is in fact meliorating the situation of his ward by enhancing the value of his property by a fair competition. In general, it seems to be the genius and spirit of our law, that tutors and curators shall do every thing in their power towards the faithful and proper discharge of their respective offices.

12. By the Roman law, tutory and curatory, being *munera publica*, might be forced upon every one who had not a relevant ground of excuse: but, with us, the persons named to these offices may either accept or decline: and where a father, in *liege poullie* (when in a state of health), names certain persons both as tutors and curators to his children, though they have acted

Their  
gation

as tutors, they may decline the office of curatory. Tutors and curators having once accepted, are liable in *diligence*, that is, are accountable for the consequences of their neglect in any part of their duty from the time of their acceptance. They are accountable *singuli in solidum*, i. e. every one of them is answerable, not only for his own diligence, but for that of his co-tutors; and any one may be sued without citing the rest: but he who is condemned in the whole, has action of relief against his co-tutors.

Law of Scotland.

13. From this obligation to diligence, we may except, (1.) Fathers or administrators in law, who, from the presumption that they act to the best of their power for their children, are liable only for actual in-tromissions. (2.) Tutors and curators named by the father in consequence of the act 1696, with the special provisos, that they shall be liable barely for in-tromissions, not for omissions; and that each of them shall be liable only for himself, and not *in solidum* for the co-tutors: but this power of exemption from diligence is limited to the estate descending from the father himself. Tutors or curators are not intitled to any salary or allowance for pains, unless a salary has been expressly contained in the testator's nomination; for their office is presumed gratuitous.

14. Though no person is obliged to accept the office of tutor or curator; yet having once accepted, he cannot throw it up or renounce it without sufficient cause; but, if he should be guilty of misapplying the minor's money, or fail in any other part of his duty, he may be removed at the suit of the minor's next in kin, or by a co-tutor or co-curator. Where the misconduct proceeds merely from indolence or inattention, the court, in place of removing the tutor, either join a curator with him, or, if he be a tutor-nominate, they oblige him to give caution for his past and future management.

15. The offices of tutory and curatory expire also by the pupil's attaining the age of puberty, or the minor's attaining the age of 21 years complete; and by the death either of the minor, or of his tutor and curator. Curatory also expires by the marriage of a female minor, who becomes thereby under the coverture of her own husband. After expiry of the office, reciprocal actions lie at the instance both of the tutors and curators, and of the minor. That at the instance of the minor is called *actio tutelæ directæ*, by which he can compel the tutors to account; that at the instance of the tutors, *actio tutelæ contrariæ*, by which the minor can be compelled to repeat what has been profitably expended during the administration; but this last does not lie till after accounting to the minor; for till then the tutors are presumed *intus habere* to have effects in their own hands for answering their disbursements.

16. Deeds either by pupils, or by minors having curators without their consent, are null; but they oblige the granters, in as far as relates to sums profitably applied to their use. A minor under curators can indeed make a testament by himself; but whatever is executed in the form of a deed *inter vivos*, requires the curator's consent. Deeds by a minor who has no curators, are as effectual as if he had had curators, and signed them with their consent; he may even alien his heritage, without the interposition of a judge.

ed in their minority, that are hurtful to them. Deeds, in themselves void, need not the remedy of restitution; but where hurtful deeds are granted by a tutor in his pupil's affairs, or by a minor who has no curators, as these deeds subsist in law, restitution is necessary: and even where a minor, having curators, executes a deed hurtful to himself with their consent, he has not only action against the curators, but he has the benefit of restitution against the deed itself. The minor cannot be restored, if he does not raise and execute a summons for reducing the deed, *ex capite minorennitatis et lesionis*, before he be 25 years old. These four years, between the age of 21 and 25, called *quadriennium utile*, are indulged to the minor, that he may have a reasonable time, from that period, when he is first presumed to have the perfect use of his reason, to consider with himself what deeds done in his minority have been truly prejudicial to him.

18. Questions of restitution are proper to the court of session. Two things must be proved by the minor, in order to the reduction of the deed: (1.) That he was minor when it was signed; (2.) That he is hurt or lesed by the deed. This lesion must not proceed merely from accident; for the privilege of restitution was not intended to exempt minors from the common misfortunes of life; it must be owing to the imprudence or negligence of the minor, or his curator.

Its requisites.

19. A minor cannot be restored against his own delict or fraud; e.g. if he should induce one to bargain with him by saying he was major. (2.) Restitution is excluded, if the minor, at any time after majority, has approved of the deed, either by a formal ratification, or tacitly by payment of interest, or by other acts inferring approbation. (3.) A minor, who has taken himself to business, as a merchant-shopkeeper, &c. cannot be restored against any deed granted by him in the course of that business, especially if he was *proximus majorænnitati* at signing the deed. (4.) According to the more common opinion, a minor cannot be restored in a question against a minor, unless some gross unfairness shall be qualified in the bargain.

How excluded.

20. The privilege of restitution does not always die with the minor himself. (1.) If a minor succeeds to a minor, the time allowed for restitution is governed by the minority of the heir, not of the ancestor. (2.) If a minor succeeds to a major, who was not full 25, the privilege continues with the heir during his minority; but he cannot avail himself of the *anni utiles*, except in so far as they were unexpired at the ancestor's death. (3.) If a major succeeds to a minor, he has only the *quadriennium utile* after the minor's death; and if he succeeds to a major dying within the *quadriennium*, no more of it can be profitable to him than what remained when the ancestor died.

How transmitted to the heir.

21. No minor can be compelled to state himself as a defender, in any action, whereby his heritable estate flowing from ascendants may be evicted from him, by one pretending a preferable right.

Minor never tenetur placitare.

22. This privilege is intended merely to save minors from the necessity of disputing upon questions of preference. It does not therefore take place, (1.) Where the action is pursued on the father's falsehood or delict. (2.) Upon his obligation to convey heritage. (3.) On his liquid bond for a sum of money, though such action should have the effect to carry off the minor's

Law of  
Scotland.

estate by adjudication. (4.) Nor in actions pursued by the minor's superior, upon feudal casualties. (5.) This privilege cannot be pleaded in bar of an action which had been first brought against the father, and is only continued against the minor; nor where the father was not in the peaceable possession of the heritable subject at his death. Before the minor can plead it, he must be served heir to his father. The persons of pupils are by said act 1696 protected from imprisonment on civil debts.

Curators of  
idiots and  
furious persons.

23. Curators are given, not only to minors, but in general to every one who, either through defect of judgment, or unfitness of disposition, is incapable of rightly managing his own affairs. Of the first sort, are idiots and furious persons. Idiots, or *fatui*, are entirely deprived of the faculty of reason. The distemper of the furious person does not consist in the defect of reason; but in an overheated imagination, which obstructs the application of reason to the purposes of life. Curators may be also granted to lunatics; and even to persons dumb and deaf, though they are of sound judgment, where it appears that they cannot exert it in the management of business. Every person, who is come of age, and is capable of acting rationally, has a natural right to conduct his own affairs. The only regular way, therefore, of appointing this sort of curators, is by a jury summoned upon a brief from the chancery; which is not, like the brief of common tutory, directed to any judge-ordinary, but to the judge of the special territory where the person alleged to be fatuous or furious resides; that, if he is truly of sound judgment, he may have an opportunity to oppose it: and for this reason, he ought to be made a party to the brief. The curatory of idiots and furious persons belongs to the nearest agnate; but a father is preferred to the curatory of his fatuous son, and the husband to that of his fatuous wife, before the agnate.

24. A clause is inserted in the brief, for inquiring how long the fatuous or furious person has been in that condition; and the verdict to be pronounced by the inquest has a retrospective effect; for it is declared a sufficient ground, without further evidence, for reducing all deeds granted after the period at which it appeared by the proof that the fatuity or furiosity began. But, as fatuous and furious persons are, by their very state, incapable of being obliged, all deeds done by them may be declared void, upon proper evidence of their fatuity at the time of signing, though they should never have been cognosed idiots by an inquest.

25. We have some few instances of the sovereign's giving curators to idiots, where the next agnate did not claim; but such gifts are truly deviations from our law, since they pass without any inquiry into the state of the person upon whom the curatory is imposed. Hence the curator of law to an idiot, serving *quandocunque*, is preferred, as soon as he offers himself, before the curator-dative. This sort of curatory does not determine by the lucid intervals of the person *sub cura*; but it expires by his death, or perfect return to a sound judgment; which last ought regularly to be declared by the sentence of a judge.

Interdic-  
tion.

26. Persons, let them be ever so profuse, or liable to be imposed upon, if they have the exercise of reason, can effectually oblige themselves, till they are fettered by law. This may be done by *Interdiction*, which is

a legal restraint laid upon such persons from signing any deed to their own prejudice, without the consent of their curators or interdictors.

27. There could be no interdiction, by our ancient practice, without a previous inquiry into the person's condition. But as there were few who could bear the shame that attends judicial interdiction, however necessary the restraint might have been, voluntary interdiction has received the countenance of law; which is generally executed in the form of a bond, whereby the grantor obliges himself to do no deed that may affect his estate, without the consent of certain friends therein mentioned. Though the reasons inductive of the bond should be but gently touched in the recital, the interdiction stands good. Voluntary interdiction, tho' it be imposed by the sole act of the person interdicted, cannot be recalled at his pleasure: but it may be taken off, (1.) By a sentence of the court of session, declaring, either that there was, from the beginning, no sufficient ground for the restraint; or that the party is, since the date of the bond, become *rei sui providus*: (2.) It falls, even without the authority of the lords, by the joint act of the person interdicted, and his interdictors, concurring to take it off. (3.) Where the bond of interdiction requires a certain number as a quorum, the restraint ceases, if the interdictors shall by death be reduced to a lesser number.

28. Judicial interdiction is imposed by a sentence of the court of session. It commonly proceeds on an action brought by a near kinsman to the party; and sometimes from the *nobile officium* of the court, when they perceive, during the pendency of a suit, that any of the litigants is, from the facility of his temper, subject to imposition. This sort must be taken off by the authority of the same court that imposed it.

29. An interdiction need not be served against the person interdicted; but it must be executed, or published by a messenger, at the market cross of the jurisdiction where he resides, by publicly reading the interdiction there, after three cyffes made for convocating the lieges. A copy of this execution must be affixed to the cross; and thereafter, the interdiction, with its execution, must (by the act 1581) be registered in the books both of the jurisdiction where the person interdicted resides and where his lands lie, or (by the act 1600) in the general register of the session, within 40 days from the publication. An interdiction, before it is registered, has no effect against third parties, tho' they should be in the private knowledge of it; but it operates against the interdictors themselves, as soon as it is delivered to them.

30. An interdiction, duly registered, has this effect, that all deeds done thereafter, by the person interdicted, without the consent of his interdictors, affecting his heritable estate, are subject to reduction. Registration in the general register secures all his lands from alienation, wherever they lie; but where the interdiction is recorded in the register of a particular shire, it covers no lands except those situated in that shire. But persons interdicted have full power to dispose of their moveables, not only by testament, but by present deeds of alienation: And creditors, in personal bonds granted after interdiction, may use all execution against their debtor's person and moveable estate: such bonds being only subject to reduction in so far as diligence

aw of  
tla 1.  
ligence against the heritable estate may proceed upon them.

Law of  
Scotland.

31. All onerous or rational deeds granted by the person interdicted, are as effectual, even without the consent of the interdictors, as if the granter had been laid under no restraint; but he cannot alter the succession of his heritable estate, by any settlement, let it be ever so rational. No deed, granted with consent of the interdictors, is reducible, though the strongest lesion or prejudice to the granter should appear: the only remedy competent, in such case, is an action by the granter against his interdictors, for making up to him what he has lost through their undue consent. It is no part of the duty of interdictors, to receive sums or manage any estate; they are given merely *ad auctoritatem prestandam*, to interpose their authority to reasonable deeds; and so are accountable for nothing but their fraud or fault, in consenting to deeds hurtful to the person under their care.

ce of in-  
dictors.

ful  
dren.

32. The law concerning the state of children falls next to be explained. Children are either born in wedlock, or out of it. All children, born in lawful marriage or wedlock, are presumed to be begotten by the person to whom the mother is married; and consequently to be lawful children. This presumption is so strongly founded, that it cannot be defeated but by direct evidence that the mother's husband could not be the father of the child, *e. g.* where he is impotent, or was absent from the wife till within six lunar months of the birth. The canonists indeed maintain, that the concurring testimony of the husband and wife, that the child was not procreated by the husband, is sufficient to elide this legal presumption for legitimacy: but it is an agreed point, that no regard is to be paid to such testimony, if it be made after they have owned the child to be theirs. A father has the absolute right of disposing of his children's person, of directing their education, and of moderate chastisement; and even after they become *puberes*, he may compel them to live in family with him, and to contribute their labour and industry, while they continue there, towards his service. A child who gets a separate flock from the father for carrying on any trade or employment, even though he should continue in the father's house, may be said to be emancipated or forisfamiliarized, in so far as concerns that flock; for the profits arising from it are his own. Forisfamiliarization, when taken in this sense, is also inferred by the child's marriage, or by his living in a separate house, with his father's permission or good-will. Children, after their full age of twenty-one years, become, according to the general opinion, their own masters: and from that period are bound to the father only by the natural ties of duty, affection, and gratitude. The mutual obligations between parents and children to maintain each other, are explained afterwards, N<sup>o</sup> clxxxiii. 4.

rd.

33. Children born out of wedlock, are styled natural children, or bastards. Bastards may be legitimated or made lawful, (1.) By the subsequent intermarriage of the mother of the child with the father. And this sort of legitimation intitles the child to all the rights of lawful children. The subsequent marriage, which produces legitimation, is considered by the law to have been entered into when the child legi-

timated was begotten; and hence, if he be a male, he excludes, by his right of primogeniture, the sons procreated after the marriage, from the succession of the father's heritage, though these sons were lawful children from the birth. Hence, also, those children only can be thus legitimated, who are begotten of a woman whom the father might at that period have lawfully married. (2.) Bastards are legitimated by letters of legitimation from the sovereign. N<sup>o</sup> clxxxii. 3.

34. As to the power of masters over their servants: Servants. All servants now enjoy the same rights and privileges with other subjects, unless in so far as they are tied down by their engagements of service. Servants are either necessary or voluntary. Necessary are those whom law obliges to work without wages, of whom immediately. Voluntary servants engage without compulsion, either for mere subsistence, or also for wages. Those who earn their bread in this way, if they should stand off from engaging, may be compelled to it by the justices of the peace, who have power to fix the rate of their wages.

35. Colliers, coal-bearers, salters, and other persons necessary to collieries and salt-works, as they are particularly described by act 1661, were formerly tied down to perpetual service at the works to which they had once entered. Upon a sale of the works, the right of their service was transferred to the new proprietor. All persons were prohibited to receive them into their service, without a testimonial from their last master; and if they deserted to another work, and were redemanded within a year thereafter, he who had received them was obliged to return them within twenty-four hours, under a penalty. But though the proprietor should neglect to require the deserter within the year, he did not, by that short prescription, lose his property in him. Colliers, &c. where the colliery to which they were restricted was either given up, or not sufficient for their maintenance, might lawfully engage with others; but if that work should be again set a-going, the proprietor might reclaim them back to it.

Colliers and  
salters.

36. But by 15 Geo. III. c. 28. these restraints, the only remaining vestiges of slavery in the law of Scotland, are abrogated; and, after the 1st July 1775, all colliers, coal-bearers, and salters, are declared to be upon the same footing with other servants or labourers. The act subjects those who were bound prior to the 1st July 1775, to a certain number of years service for their freedom, according to the age of the person.

Restraints  
largely tak-  
ken off.

37. The poor make the lowest class or order of persons. Indigent children may be compelled to serve any of the king's subjects without wages, till their age of thirty years. Vagrants and sturdy beggars may be also compelled to serve any manufacturer. And because few persons were willing to receive them into their service, public work-houses are ordained to be built for setting them to work. The poor who cannot work, must be maintained by the parishes in which they were born; and where the place of their nativity is not known, that burden falls upon the parishes where they have had their most common resort, for the three years immediately preceding their being apprehended or their applying for the public charity. Where the contributions collected at the churches to which they belong are not sufficient for their maintenance, they are

The poor.

Scotland.

to receive badges from the minister and kirk-session, in virtue of which they may ask alms at the dwelling-houses of the inhabitants of the parish.

## C H A P. II.

### Of THINGS.

THE things, or subjects, to which persons have right, are the second object of law.

cxii. SECT. I. *Of the division of rights, and the several ways by which a right may be acquired.*

Property.

THE right of enjoying and disposing of a subject at one's pleasure, is called property. Proprietors are restrained by law from using their property emulously to their neighbour's prejudice. Every state or sovereign has a power over private property, called, by some lawyers, *dominium eminens*, in virtue of which, the proprietor may be compelled to sell his property for an adequate price, where an evident utility on the part of the public demands it.

Things incapable of appropriation.

2. Certain things are by nature itself incapable of appropriation; as the air, the light, the ocean, &c.: none of which can be brought under the power of any one person, though their use be common to all. Others are by law exempted from private commerce, in respect of the uses to which they are destined. Of this last kind are, (1.) *Res publica*, as navigable rivers, highways, bridges, &c.: the right of which is vested in the king, chiefly for the benefit of his people, and they are called *regalia*. (2.) *Res universitatis*, things which belong in property to a particular corporation or society, and whose use is common to every individual in it, but both property and use are subject to the regulations of the society; as town-houses, corporation-halls, market-places, church-yards, &c. The lands or other revenue belonging to a corporation do not fall under this class, but are *juris privati*, quoad the corporation.

Ways of acquiring property.

3. Property may be acquired, either by *occupation* or *accession*; and transferred by *tradition* or *prescription*: but prescription being also a way of losing property, falls to be explained under a separate title. OCCUPATION, or occupancy, is the appropriating of things which have no owner, by apprehending them, or seizing their possession. This was the original method of acquiring property: and continued, under certain restrictions, the doctrine of the Roman law, *Quod nullius est, sit occupantis*: but it can have no room in the feudal plan, by which the king is looked on as the original proprietor of all the lands within his dominions.

4. Even in that sort of moveable goods which are presumed to have once had an owner, this rule obtains by the law of Scotland, *Quod nullius est, sit domini regis*. Thus, the right of treasure hid under ground is not acquired by occupation, but accrues to the king. Thus also, where one finds strayed cattle or other moveables, which have been lost by the former owner, the finder acquires no right in them, but must give public notice thereof; and if, within year and day after such notice, the proprietor does not claim his goods, they fall to the king, sheriff, or other person to whom the king has made a grant of such felicitats.

5. In that sort of moveables which never had an owner, as wild-beasts, fowls, fishes, or pearls found on the shore, the original law takes place, that he who first apprehends, becomes proprietor; in so much, that though the right of hunting, fowling, and fishing, be restrained by statute, under certain penalties, yet all game, even what is caught in contravention of the law, becomes the property of the catcher (unless where the confiscation thereof is made part of the penalty), the contravener being obnoxious, however, to the penal enactment of the statutes in consequence of his transgression. It was not for a long time a fixed point whether a person, though possessed of the valued rent by law intitling him to kill game, could hunt upon another person's grounds without consent: but it was lately found by the court of session, and affirmed upon appeal, that he could not; it being repugnant to the idea of property, that any person, however qualified, should have it in his power to traverse and hunt upon another's grounds without consent of the proprietor. Although certain things become the property of the first occupant, yet there are others which fall not under this rule. Thus, whales thrown in or killed on our coasts, belong neither to those who kill them, nor to the proprietor of the grounds on which they are cast; but to the king, providing they are so large as that they cannot be drawn by a wane with six oxen.

6. Accession is that way of acquiring property, by which, in two things which have a connection with or dependence on one another, the property of the principal thing draws after it the property of its accessory. Thus the owner of a cow becomes the owner of the calf; a house belongs to the owner of the ground on which it stands, though built with materials belonging to and at the charge of another; trees taking root in our ground, though planted by another, become ours. Thus also, the sensible addition made to one's ground by what a river washes from other grounds (which is called *alluvio*), accrues to the matter of the ground which receives the addition: but where it happened that a large piece of ground was disjoined and annexed to another person's by the force of a river or any other accident, and which was by the Romans called *avulsio*, they considered the owner's right of property still to subsist, § 21. *Insl. de rer. divis*; and it is probable that, in a similar case, our courts would countenance the distinction. The Romans excepted from this rule the case of paintings drawn on another man's board or canvas, in consideration of the excellency of the art; which exception our practice has for a like reason extended to similar cases.

7. Under accession is comprehended SPECIFICATION; by which is meant, a person's making a new species or subject, from materials belonging to another. Where the new species can be again reduced to the matter of which it was made, law considers the former mass as still existing; and therefore, the new species, as an accessory to the former subject, belongs to the proprietor of that subject: but where the thing made cannot be so reduced, as in the case of wine, which cannot be again turned into grapes, there is no place for the *fiducia juris*; and therefore the workmanship draws after it the property of the materials. But the person who thus carries the property from the other is bound to indemnify

indemnify him according to the true value; and in case it was done *mala fide*, he may be made liable in the *pretium affectionis* or utmost value.

8. Though the new species should be produced from the **COMMIXTION** or confusion of different substances belonging to different proprietors, the same rule holds; but where the mixture is made by the common consent of the owner, such consent makes the whole a common property, according to the shares that each proprietor had formerly in the several subjects. Where things of the same sort are mixed without the consent of the proprietors, which cannot again be separated, *e. g.* two hogheads of wine, the whole likewise becomes a common property; but, in the after-division, regard ought to be had to the different quality of the wines: if the things so mixed admit of a separation, *e. g.* two flocks of sheep, the property continues distinct.

9. Property is carried from one to another by **TRADITION**; which is the delivery of possession by the proprietor, with an intention to transfer the property to the receiver. Two things are therefore requisite, in order to the transmitting of property in this way: 1. The intention or consent of the former owner to transfer it on some proper title of alienation, as sale, exchange, gift, &c. (2.) The actual delivery in pursuance of that intention. The first is called the *causa*, the other the *modus transferendi dominii*: which last is so necessary to the acquiring of property, that he who gets the last right, with the first tradition, is preferred, according to the rule, *Traditionibus, non nudis pactis, transferuntur rerum dominia*.

10. Tradition is either real, where the *ipsa corpora* of moveables are put into the hands of the receiver; or symbolical, which is used where the thing is incapable of real delivery, or even when actual delivery is only inconvenient. Where the possession or custody of the subject has been before with him to whom the property is to be transferred, there is no room for tradition.

11. Possession, which is essential both to the acquisition and enjoyment of property, is defined, the detention of a thing, with a design or *animus* in the detainer of holding it as his own. It cannot be acquired by the sole act of the mind, without real detention; but, being once acquired, it may be continued *solo animo*. Possession is either natural, or civil. Natural possession is, when one possesses by himself: thus, we possess lands by cultivating them and reaping their fruits, houses by inhabiting them, moveables by detaining them in our hands. Civil possession is our holding the thing, either by the sole act of the mind, or by the hands of another who holds it in our name: thus, the owner of a thing lent possesses it by the borrower; the proprietor of lands, by his tackman, trustee, or steward, &c. The same subject cannot be possessed entirely, or *in solidum*, by two different persons at one and the same time; and therefore possession by an act of the mind ceases, as soon as the natural possession is so taken up by another, that the former possessor is not suffered to re-enter. Yet two persons may, in the judgment of law, possess the same subject, at the same time, on different rights: thus, in the case of a pledge, the creditor possesses it in his own name, in virtue of the right of impignoration; while the proprietor is considered as possessing, in and

through the creditor, in so far as is necessary for supporting his right of property. The same doctrine holds in life-renters, tackmen, and, generally, in every case where there are rights affecting a subject distinct from the property.

12. A *bona fide* possessor is he who, though he is not really proprietor of the subject, yet believes himself proprietor on probable grounds. A *mala fide* possessor is he who knows, or is presumed to know, that what he possesses is the property of another. A possessor *bona fide* acquired right, by the Roman law, to the fruits of the subject possessed, that had been reaped and consumed by himself, while he believed the subjects his own. By our customs, perception alone, without consumption, secures the possessor: nay, if he has sown the ground, while his *bona fides* continued, he is intitled to reap the crop, *propter curam et culturam*. But this doctrine does not reach to civil fruits, *e. g.* the interest of money, which the *bona fide* receiver must restore, together with the principal, to the owner.

13. *Bona fides* necessarily ceaseth by the *conscientia rei alienae* in the possessor, whether such conscientia should proceed from legal interpellation or private knowledge. *Mala fides* is sometimes induced by the true owner's bringing his action against the possessor, sometimes not till litifcontestation, and, in cases uncommonly favourable, not till sentence be pronounced against the possessor.

14. The property of moveable subjects is presumed by the bare act of possession, until the contrary be proved; but possession of an immoveable subject, tho' for a century of years together, if there is no seisin, does not create even a presumptive right to it: *Nulla seisin, nulla terra*. Such subject is considered as caducuary, and so accrues to the sovereign. Where the property of a subject is contested, the lawful possessor is intitled to continue his possession, till the point of right be discussed; and, if he has lost it by force or stealth, the judge will, upon summary application, immediately restore it to him.

15. Where a possessor has several rights in his person, affecting the subject possessed, the general rule is, that he may ascribe his possession to which of them he pleases; but one cannot ascribe his possession to a title other than that on which it commenced, in prejudice of him from whom his title flowed.

SECT. II. *Of heritable and moveable rights.*

FOR the better understanding the doctrine of this title, it must be known, that by the law of Scotland, and indeed of most nations of Europe since the introduction of feus, wherever there are two or more in the same degree of contiguity to one who dies intestate, and who are not all females, such rights belonging to the deceased as are either properly feudal, or have any resemblance to feudal rights, descend wholly to one of them, who is considered as his proper heir; the others, who have the name of next of kin or executors, must be contented with that portion of the estate which is of a more perishable nature. Hence has arisen the division of rights to be explained under this title: the subjects descending to the heir, are styled *heritable*; and those that fall to the next of kin *moveable*.

2. All rights of, or affecting lands, under which are

Law of Scotland.

Division of rights into heritable and moveable.

comprehended houses, mills, fishings, teinds; and all rights of subjects that are *fundo annexa*, whether completed by feisin or not, are heritable *ex sua natura*. On the other hand, every thing that moves itself or can be moved, and in general whatever is not united to land, is moveable: as household-furniture, corns, cattle, cash, arrears of rent and of interest, even though they should be due on a right of annualrent: for though the arrears last mentioned are secured on land, yet being presently payable, they are considered as cash.

3. Debts, (*nomina debitorum*), when due by bill, promissory note, or account, are moveable. When constituted by bond; they do not all fall under any one head; but are divided into heritable and moveable, by the following rules. All debts constituted by bond bearing an obligation to invest the creditor in any heritable subject in security of the principal sum and annualrent, or annualrent only, are heritable; for they not only carry a yearly profit, but are secured upon land.

4. Bonds merely personal, though bearing a clause of interest, are, by act 1661, declared to be moveable as to succession; *i. e.* they go, not to the heir, but to the next of kin or executors: but they are heritable with respect to the fisk, and to the rights of husband and wife; that is, though, by the general rule, moveable rights fall under the communion of goods consequent upon marriage, and the moveables of denounced persons fall to the crown or fisk by single escheat, yet such bonds do neither, but are heritable in both respects.

5. Bonds taken payable to heirs and assignees, including executors, are heritable in all respects, from the destination of the creditor. But a bond, which is made payable to heirs, without mention of executors, descends, not to the proper heir in heritage, though heirs are mentioned in the bond, but to the executor; for the word *heir*, which is a generic term, points out him who is to succeed by law in the right; and the executor, being the heir *in mobilibus*, is considered as the person to whom such bond is taken payable. But where a bond is taken to heirs-male, or to a series of heirs, one after another, such bond is heritable, because its destination necessarily excludes executors.

How moveable rights become heritable.

6. Subjects originally moveable become heritable, (1.) By the proprietor's destination. Thus, a jewel, or any other moveable subject, may be provided to the heir, from the right competent to every proprietor to settle his property on whom he pleases. (2.) Moveable rights may become heritable, by the supervening of an heritable security: Thus, a sum due by a personal bond becomes heritable, by the creditor's accepting an heritable right for securing it, or by adjudging upon it.

7. Heritable rights do not become moveable by accessory moveable securities; the heritable right being in such case the *jus nobilius*, which draws the other after it.

Rights partly heritable, partly moveable.

8. Certain subjects partake, in different respects, of the nature both of heritable and moveable. Personal bonds are, by the above cited act 1661, moveable in respect of succession; but heritable as to the fisk, and the rights of husband and wife. All bonds, whether merely personal, or even heritable, on which no feisin has

followed, may be affected at the suit of creditors, either by adjudication, which is a diligence proper to heritage; or by arrestment, which is peculiar to moveables. Bonds including executors, though they descend to the creditor's heir, are payable by the debtor's executors, without relief against the heir; since the debtor's succession cannot be affected by the destination of the creditor.

9. All questions, whether a right be heritable or moveable, must be determined according to the condition of the subject at the time of the ancestor's death. If it was heritable at that period, it must belong to the heir; if moveable, it must fall to the executor, without regard to any alterations that may have affected the subject in the intermediate period between the ancestor's death and the competition.

## I. HERITABLE RIGHTS.

### SECT. III. *Of the constitution of heritable rights by charter and feisin.*

HERITABLE rights are governed by the feudal law, which owed its origin, or at least its first improvements, to the Longobards; whose kings, upon having penetrated into Italy, the better to preserve their conquests, made grants to their principal commanders of great part of the conquered provinces, to be again subdivided by them among the lower officers, under the conditions of fidelity and military service.

2. The feudal constitutions and usages were first reduced into writing about the year 1150, by two lawyers of Milan, under the title of *Consuetudines Feudorum*. None of the German emperors appear to have expressly confirmed this collection by their authority; but it is generally agreed, that it had their tacit approbation, and was considered as the customary feudal law of all the countries subject to the empire. No other country has ever acknowledged these books for their law; but each state has formed to itself such a system of feudal rules, as best agreed with the genius of its own constitution. In feudal questions, therefore, we are governed, in the first place, by our own statutes and customs; where these fail us, we have regard to the practice of neighbouring countries, if the genius of their law appears to be the same with ours; and should the question still remain doubtful, we may have recourse to those written books of the feus, as to the original plan on which all feudal systems have proceeded.

3. This military grant got the name, first of *beneficium*, and afterwards of *feudum*; and was defined a gratuitous right to the property of lands, made under the conditions of fealty and military service, to be performed to the granter by the receiver; the radical right of the lands still remaining in the granter. Under lands, in this definition, are comprehended all rights or subjects so connected with land, that they are deemed a part thereof; as houses, mills, fishings, jurisdictions, patronages, &c. Though feus in their original nature were gratuitous, they soon became the subject of commerce; services of a civil or religious kind were frequently substituted in place of military; and now, of a long time, services of every kind have been entirely dispensed

penfed with in certain feudal tenures. He who makes the grant is called the *superior*, and he who receives it the *vassal*. The subject of the *grant* is commonly called the *feu*; though that word is at other times, in our law, used to signify one particular tenure. (See Sect. iv. 2.). The interest retained by the superior in the feu is styled *dominium directum*, or the superiority; and the interest acquired by the vassal, *dominium utile*, or the property. The word *feu* is promiscuously applied to both.

4. Allodial goods are opposed to feus; by which are understood goods enjoyed by the owner, independent of a superior. All moveable goods are allodial; lands only are so when they are given without the condition of fealty or homage. By the feudal system, the sovereign, who is the fountain of feudal rights, reserves to himself the superiority of all the lands of which he makes the grant; so that, with us, no lands are allodial, except those of the king's own property, the superiorities which the king reserves in the property-lands of his subjects, and manes and glebes, the right of which is completed by the presbytery's designation, without any feudal grant.

5. Every person who is in the right of an immovable subject, provided he has the free administration of his estate, and is not debarred by statute, or by the nature of his right, may dispose of it to another. Nay, a vassal, though he has only the *dominium utile*, can subfeu his property to a subvassal by a subaltern right, and thereby raise a new *dominium directum* in himself, subordinate to that which is in his superior; and so in *infinitum*. The vassal who thus subfeus is called the subvassal's immediate superior, and the vassal's superior is the subvassal's mediate superior.

6. All persons who are not disabled by law, may acquire and enjoy feudal rights. Papists cannot purchase a land estate by any voluntary deed. Aliens, who owe allegiance to a foreign prince, cannot hold a feudal right without naturalization: and therefore, where such privilege was intended to be given to favoured nations or persons, statutes of naturalization were necessary, either general or special; or at least, letters of naturalization by the sovereign.

7. Every heritable subject, capable of commerce, may be granted in feu. From this general rule are excepted, 1. The annexed property of the crown, which is not alienable without a previous dissolution in parliament. 2. Tailzied lands, which are devised under condition that they shall not be aliened. 3. An estate in *hereditate jacente* cannot be effectually aliened by the heir-apparent (*i. e.* not entered); but such alienation becomes effectual upon his entry, the supervening right accruing in that case to the purchaser; which is a rule applicable to the alienation of all subjects not belonging to the vender at the time of the sale.

8. The feudal right, or, as it is called, *investiture*, is constituted by charter and seisin. By the charter, we understand that writing which contains the grant of the feudal subject to the vassal, whether it be executed in the proper form of a charter, or of a disposition. Charters by subject superiors are granted, either, 1. *A me de superiore meo*, when they are to be holden, not of the granter himself, but of his superior. This sort is called a *public holding*, because vassals were

in ancient times publicly received in the superior's court before the *pares curie* or co-vassals. Or, 2. *De me*, where the lands are to be holden of the granter. These were called sometimes *base rights*, from *bas*, *lower*; and sometimes *private*, because, before the establishment of our records, they were easily concealed from third parties; the nature of all which will be more fully explained, Sect. vii. An original charter is that by which the feu is first granted: A charter by progress is a renewed disposition of that feu to the heir or assignee of the vassal. All doubtful clauses in charters by progress ought to be construed agreeably to the original grant; and all clauses in the original charter are understood to be implied in the charters by progress, if there be no express alteration.

9. The first clause in an original charter, which follows immediately after the name and designation of the granter, is the narrative or recital, which expresses the causes inductive of the grant. If the grant be made for a valuable consideration, it is said to be *onerous*; if for love and favour, *gratuitous*. In the dispositive clause of a charter, the subjects made over are described either by special boundaries or march-stones, (which is called a *bounding charter*), or by such other characters as may sufficiently distinguish them. A charter regularly carries right to no subjects but what are contained in this clause, though they should be mentioned in some other clause of the charter. It has been however found, that a right to salmon-fishing was carried by a clause *cum piscariis* in the *tenendas* of a charter, the same having been followed with possession.

10. The clause of *tenendas* (from its first words *tenendas predias terras*) expresses the particular tenure by which the lands are to be holden. The clause of *reddendo* (from the words *reddendo inde annuatim*) specifies the particular duty or service which the vassal is to pay or perform to the superior.

11. The clause of *warrandice* is that by which the granter obliges himself that the right conveyed shall be effectual to the receiver. Warrandice is either *personal* or *real*. *Personal* warrandice, where the granter is only bound personally, is either, 1. *Simple*, that he shall grant no deed in prejudice of the right; and this sort, which is confined to future deeds, is implied even in donations. 2. *Warrandice from fact and deed*, by which the granter warrants that the right neither has been, nor shall be, hurt by any fact of his. Or, 3. *Absolute warrandice contra omnes mortales*, whereby the right is warranted against all legal defects in it which may carry it off from the receiver either wholly or in part. Where a sale of lands proceeds upon an *onerous* cause, the granter is liable in absolute warrandice, though no warrandice be expressed; but in assignments to debts or decrees, no higher warrandice than from fact and deed is implied.

12. Gratuitous grants by the crown imply no warrandice; and though warrandice should be expressed, the clause is ineffectual, from a presumption that it has crept in by the negligence of the crown's officers. But where the crown makes a grant, not *jure coronæ*, but for an adequate price, the sovereign is in the same case with his subjects.

13. Absolute warrandice, in case of eviction, affords

its constituent parts.

Warrandice.

Effects of warrandice.

Law of Scotland.

Law of Scotland

an action to the grantee against the granter, for making up to him all that he shall have suffered through the defect of the right; and not simply for his indemnification, by the granter's repayment of the price to him. But as warrandice is penal, and consequently *stricti juris*, it is not easily presumed, nor is it incurred from every light servitude that may affect the subject; far less does it extend to burdens which may affect the subject posterior to the grant, nor to those imposed by public statute, whether before or after, unless specially warranted against.

lands of Scotland, is constituted *jure coronæ* without feisin. In several parcels of land that lie contiguous to one another, one feisin serves for all, unless the right of the several parcels be either holden of different superiors, or derived from different authors, or enjoyed by different tenures under the same superior. In discontinuous lands, a separate feisin must be taken on every parcel, unless the sovereign has united them into one tenantry by a charter of union; in which case, if there is no special place expressed, a feisin taken on any part of the united lands will serve for the whole, even though they be situated in different shires. The only effect of union is, to give the discontinuous lands the same quality as if they had been contiguous or naturally united; union, therefore, does not take off the necessity of separate feisins, in lands holden by different tenures, or the rights of which flow from different superiors, these being incapable of natural union.

Real warrandice.

14. *Real warrandice* is either, 1. *Express*, whereby, in security of the lands principally conveyed, other lands, called *warrandice lands*, are also made over, to which the receiver may have recourse in case the principal lands be evicted. Or, 2. *Tacit*, which is constituted by the exchange or excambion of one piece of ground with another; for, if the lands exchanged are carried off from either of the parties, the law itself, without any paction, gives that party immediate recourse upon his own first lands, given in exchange for the lands evicted.

Excambion.

21. The privilege of barony carries a higher right than union does, and consequently includes union in it as the lesser degree. This right of barony can neither be given, nor transmitted, unless by the crown; but the quality of simple union, being once conferred on lands by the sovereign, may be communicated by the vassal to a subvassal. Though part of the lands united or erected into a barony be sold by the vassal to be holden *a me*, the whole union is not thereby dissolved: what remains unsold retains the quality.

Precept of feisin.

15. The charter concludes with a *precept of feisin*, which is the command of the superior granter of the right to his bailie, for giving feisin or possession to the vassal, or his attorney, by delivering to him the proper symbols. Any person, whose name may be inserted in the blank left in the precept for that purpose, can execute the precept as bailie; and whoever has the precept of feisin in his hands, is presumed to have a power of attorney from the vassal for receiving possession in his name.

Barony implies union

Instrument of feisin.

16. A feisin is the instrument or attestation of a notary, that possession was actually given by the superior or his bailie, to the vassal or his attorney; which is considered as so necessary a solemnity, as not to be suppleable, either by a proof of natural possession, or even of the special fact that the vassal was duly entered to the possession by the superior's bailie.

22. A charter, not perfected by feisin, is a right merely personal, which does not transfer the property (see N<sup>o</sup> clxxxiii. 1.); and a feisin of itself bears no faith without its warrant: It is the charter and feisin joined together that constitutes the feudal right, and secures the receiver against the effect of all posterior feisins, even though the charters on which they proceeded should be prior to his.

A charter becomes real only after feisin

Symbols used in feisins.

17. The symbols by which the delivery of possession is expressed, are, for lands, earth, and stone; for rights of annualrent payable forth of land, it is also earth and stone with the addition of a penny money; for parsonage tcmds, a sheaf of corn; for jurisdictions, the book of the court; for patronages, a psalm-book, and the keys of the church; for fishings, net and coble; for mills, clap and happer, &c. The feisin must be taken upon the ground of the lands, except where there is a special dispensation in the charter from the crown.

23. No quality which is designed as a lien or real burden on a feudal right, can be effectual against singular successors, if it be not inserted in the investiture. If the creditors in the burden are not particularly mentioned, the burden is not real; for no perpetual unknown incumbrance can be created upon lands. Where the right itself is granted with the burden of the sum therein mentioned, or where it is declared void if the sum be not paid against a day certain, the burden is real; but where the receiver is simply obliged by his acceptance to make payment, the clause is effectual only against him and his heirs.

All burdens must be inserted in the investiture.

Registration of feisins.

18. All feisins must be registered within 60 days after their date, either in the general register of feisins at Edinburgh, or in the register of the particular shire appointed by the act 1617; which, it must be observed, is not, in every case, the shire within which the lands lie. Burgage feisins are ordained to be registered in the books of the borough.

SECT. IV. Of the several kinds of holding.

clxv.

19. Unregistered feisins are ineffectual against third parties, but they are valid against the granters and their heirs. Feisins regularly recorded, are preferable, not according to their own dates, but the dates of their registration.

FEUDAL subjects are chiefly distinguished by their different manners of holding, which were either *ward*, *thane*, *feu*, or *burgage*. *Ward holding*, (which is now abolished by 20 Geo. II. c. 50.) was that which was granted for military service. Its proper *reddendo* was, *services*, or *services used and wont*; by which last was meant the performance of service whenever the superior's occasions required it. As all feudal rights were originally held by this tenure, ward holding was in *dubio* presumed. Hence, though the *reddendo* had contained some special service or yearly duty, the holding was presumed ward, if another holding was not particularly expressed.

Ward holding

One feisin serves in contiguous and united tenements.

20. Feisin necessarily supposes a superior by whom it is given; the right therefore which the sovereign, who acknowledges no superior, has over the whole

2. *Feu holding* is that whereby the vassal is obliged particularly expressed.

Feu holding to

Law of Scotland.

Law of Scotland.

to pay to the superior a yearly rent in money or grain, and sometimes also in services proper to a farm, as ploughing, reaping, carriages for the superior's use, &c. *nomine feudi firme*. This kind of tenure was introduced for the encouragement of agriculture, the improvement of which was considerably obstructed by the vassal's obligation to military service. It appears to have been a tenure known in Scotland as far back as *leges burgorum*.

the *dominium utile*, or property, is conveyed to his vassal. The superiority carries a right to the services and annual duties contained in the *reddendo* of the vassal's charter. The duty payable by the vassal is a *debitum fundi*, i. e. it is recoverable, not only by a personal action against himself, but by a real action against the lands.

Ward-holding.

3. *Blanch*-holding is that whereby the vassal is to pay to the superior an elusory yearly duty, as a penny money, a rose, a pair of gilt spurs, &c. merely in acknowledgment of the superiority, *nomine alio firme*. This duty, where it is a thing of yearly growth, if it be not demanded within the year, cannot be exacted thereafter; and where the words *si petatur tantum* are subjoined to the *reddendo*, they imply a release to the vassal, whatever the quality of the duty may be, if it is not asked within the year.

2. Besides the constant fixed rights of superiority, casual there are others, which, because they depend upon uncertain events, are called *casualties*.

3. The casualties proper to a ward-holding, while that tenure subsisted, were *ward*, *recognition*, and *marriage*, which it is now unnecessary to explain, as by the late statutes 20 and 25 Geo. II. for abolishing ward-holdings, the tenure of the lands holden ward of the crown or prince is turned into *blanch*, for payment of one penny Scots yearly, *si petatur tantum*; and the tenure of those holden of subjects into *feu*, for payment of such yearly feu duty in money, victual, or cattle, in place of all services, as should be fixed by the court of session. And accordingly that court, by act of sederunt Feb. 8. 1749, laid down rules for ascertaining the extent of these feu-duties. A full history of their casualties, and of the effects consequent upon their falling to the superior, will be found in Erskine's large Institute, B. 2. T. 5. § 5. *et sequen*; to which the reader is referred.

Burgage-holding.

4. *Burgage*-holding is that, by which borough-royal hold of the sovereign the lands which are contained in their charters of erection. This, in the opinion of *Craig*, does not constitute a separate tenure, but is a species of ward holding; with this speciality, that the vassal is not a private person, but a community: and indeed, watching and warding, which is the usual service contained in the *reddendo* of such charters, might be properly enough said, some centuries ago, to have been of the military kind. As the royal borough is the king's vassal, all burgage-holders hold immediately of the crown: the magistrates, therefore, when they receive the resignations of the particular burgesses, and give seisin to them, act, not as superiors, but as the king's bailies specially authorized thereto.

4. The only casualty, or rather forfeiture, proper to feu-holding, is the loss or tinsel of the feu-right, by the neglect of payment of the feu duty for two full years. Yet where there is no conventional irritancy in the feu-right, the vassal is allowed to purge the legal irritancy at the bar; that is, he may prevent the forfeiture, by making payment before sentence: but where the legal irritancy is fortified by a conventional, he is not allowed to purge, unless where he can give a good reason for the delay of payment.

Mortification.

5. Feudal subjects, granted to churches, monasteries, or other societies for religious or charitable uses, are said to be mortified, or granted *ad manum mortuam*; either because all casualties must necessarily be lost to the superior, where the vassal is a corporation, which never dies; or because the property of these subjects is granted to a dead hand, which cannot transfer it to another. In lands mortified in times of Popery to the church, whether granted to prelates for the behoof of the church, or *in puram elemosynam*; the only services preitable by the vassals were prayers, and singing of masses for the souls of the deceased, which approaches nearer to *blanch*-holding than ward. The purposes of such grants having been, upon the reformation, declared superstitious, the lands mortified were annexed to the crown: but mortifications to universities, hospitals, &c. were not affected by that annexation; and lands may, at this day, be mortified to any lawful purpose, either by *blanch* or by feu holding. But as the superior must lose all the casualties of superiority in the case of mortifications to churches, universities, &c. which being considered as a corporation, never dies; therefore lands cannot be mortified without the superior's consent. *Craig*, lib. 1. *diag.* 11. § 21.

5. The casualties common to all holdings are, *non-entry*, *relief*, *liferent escheat*, *disclamation*, and *purpresture*. *NON-ENTRY* is that casualty which arises to the superior out of the rents of the feudal subject, through the heir's neglecting to renew the investiture after his ancestor's death. The superior is intitled to this casualty, not only where the heir has not obtained himself investiture, but where his retour or investiture is set aside upon nullities. The heir, from the death of the ancestor, till he be cited by the superior in a process of general declarator of non-entry, loses only the retoured duties of his lands, (see next parag.); and he forfeited these, though his delay should not argue any contempt of the superior, because the casualty is considered to fall, as a condition implied in the feudal right, and not as a penalty of transgression: but reasonable excuses are now admitted to liberate even from the retoured duties before citation.

Retoured duties.

SECT. V. Of the casualties due to the superior.

THE right of the superior continues unimpaired, notwithstanding the feudal grant, unless in so far as

6. For understanding the nature of retoured duties, it must be known, that there was anciently a general valuation of all the lands in Scotland, designed both for regulating the proportion of public subsidies, and for ascertaining the quantity of non-entry and relief-duties payable to the superior; which appears, by a contract between K. R. Bruce and his subjects anno 1327, preserved in the library of the Faculty of Advocates, to have been settled at least as far back as the reign of Alexander III. This valuation became in the

Law of  
Scotland.

course of time, by the improvement of agriculture, and perhaps also by the heightening of the nominal value of our money, from the reign of Robert I. downwards to that of James III. much too low a standard for the superior's casualties: wherefore, in all services of heirs, the inquest came at last to take proof likewise of the present value of the lands contained in the brief (*quantum nunc valent*), in order to fix these casualties. The first was called the *old*, and the other the *new, extent*. Though both extents were ordained to be specified in all retours made to the chancery upon briefs of inquest; yet by the appellation of retoured duties in a question concerning casualties, the new extent is always understood. The old extent continued the rule for levying public subsidies, till a tax was imposed by new proportions, by several acts made during the usurpation. By two acts of Cromwell's parliament, held at Westminster in 1656, imposing taxations on Scotland, the rates laid upon the several counties are precisely fixed. The subsidy granted by the act of convention 1667 was levied on the several counties, nearly in the same proportions that were fixed by the usurper in 1656; and the sums to which each county was subjected were subdivided among the individual landholders in that county, according to the valuations already settled, or that should be settled by the commissioners appointed to carry that act into execution. The rent fixed by these valuations is commonly called the *valued rent*; according to which the land tax, and most of the other public burdens, have been levied since that time.

Old and  
new ex-  
tents.

Valued  
rent.

7. In feu-holdings, the feu-duty is retoured as the rent, because the feu-duty is presumed to be, and truly was at first, the rent. The superior therefore of a feu-holding gets no non-entry, before citation in the general declarator; for he would have been intitled to the yearly feu-duty, though the fee had been full, *i. e.* though there had been a vassal inquest in the lands. The superior of teinds gets the fifth part of the retoured duty as non-entry, because the law considers teinds to be worth a fifth part of the rent. In rights of annualrent which are holden of the granter, the annualrenter becomes his debtor's vassal; and the annualrent contained in the right is retoured to the blanch or other duty contained in the right before declarator.

8. It is because the retoured duty is the presumed rent, that the non-entry is governed by it. If therefore no retour of the lands in non-entry can be produced, nor any evidence brought of the retoured duty, the superior is intitled to the real, or at least to the valued, rent, even before citation. In lands formerly holden ward of the King, the heir, in place of the retoured duties, is subjected only to the annual payment of one *per cent.* of the valued rent.

9. The heir, after he is cited by the superior in the action of general declarator, is subjected to the full rents till his entry, because his neglect is less excusable after citation. The decree of declarator, proceeding on this action, intitles the superior to the possession, and gives him right to the rents downward from the citation. As this sort of non-entry is properly penal, our law has always restricted it to the retoured duties, if the heir had a probable excuse for not entering.

In what  
cases non-  
entry is not  
due.

10. Non-entry does not obtain in burgage-holdings, because the incorporation of inhabitants holds the whole incorporated subjects of the King; and there

can be no non-entry due in lands granted to communities, because there the vassal never dies. This covers the right of particulars from non-entry: for if non entry be excluded with regard to the whole, it cannot obtain with regard to any part. It is also excluded, as to a third of the lands, by the terce, during the widow's life; and as to the whole of them, by the courtesy during the life of the husband. But it is not excluded by a precept of seisin granted to the heir till seisin be taken thereupon.

11. RELIEF is that casualty which intitles the superior to an acknowledgment or consideration from the heir for receiving him as vassal. It is called *relief*, because, by the entry of the heir, his fee is relieved out of the hands of the superior. It is not due in feu-holdings flowing from subjects, unless where it is expressed in the charter by a special clause for doubling the feu-duty at the entry of an heir; but, in feu-rights holden of the crown, it is due, though there should be no such clause in the charter. The superior can recover this casualty, either by a pointing of the ground, as a *debitum fundi*, or by a personal action against the heir. In blanch and feu holdings, where this casualty is expressly stipulated, a year's blanch or feu duty is due in name of *relief*, beside the current year's duty payable in name of *blanch* or *feu farm*.

12. ESCHEAT (from *eschewer*, to happen or fall) is that forfeiture which falls through a person's being denounced rebel. It is either *single* or *liferent*. *Single escheat*, though it does not accrue to the superior, must be explained in this place, because of its coincidence with *liferent*.

13. After a debt is constituted, either by a formal decree, or by registration of the ground of debt, which to the special effect of execution, is in law accounted a decree; the creditor may obtain letters of horning, issuing from the signet, commanding messengers to charge the debtor to pay or perform his obligation, within a day certain. Where horning proceeds on a formal decree of the session, the time indulged by law to the debtor is fifteen days; if upon a decree of the commission of teinds or admiral, it is ten; and upon the decrees of all inferior judges, fifteen days. Where it proceeds on a registered obligation, which specifies the number of days, that number must be the rule; and, if no precise number be mentioned, the charge must be given in fifteen days, which is the term of law, unless where special statute interposes; as in bills, upon which the debtor must be charged on six days.

14. The messenger must execute these letters (and indeed all summonses) against the debtor, either personally or at his dwelling-house; and, if he get not access to the house, he must strike six knocks at the gate, and thereafter affix to it a copy of his execution. If payment be not made within the days mentioned in the horning, the messenger, after proclaiming three oyeses at the market-crofs of the head borough of the debtor's domicile, and reading the letters there, blows three blasts with a horn, by which the debtor is understood to be proclaimed rebel to the king for contempt of his authority; after which, he must affix a copy of the execution to the market-crofs: This is called the *publication of the diligence*, or a *denunciation at the horn*. Where the debtor is not in Scotland, he must be charged on sixty days, and denounced at the market-

market-cross of Edinburgh, and pier and shore of Leith.

15. Denunciation, if registered within 15 days, either in the sheriff's books, or in the general register, drew after it the rebel's single escheat, *i. e.* the forfeiture of his moveables to the crown. Persons denounced rebels have not a *persona standi in judicio*; they can neither sue nor defend in any action. But this incapacity being unfavourable, is personal to the rebel, and cannot be pleaded against his assignee.

16. Persons cited to the court of judicary may be also denounced rebels, either for appearing there with too great a number of attendants: or, if they fail to appear, they are declared fugitives from the law. Single escheat falls, without denunciation, upon sentence of death pronounced in any criminal trial; and, by special statute, upon one's being convicted of certain crimes, though not capital; as perjury, bigamy, deforcement, breach of arrestment, and usury. By the late act abolishing ward holdings, the casualties both of single and liferent escheat are discharged, when proceeding upon denunciation for civil debts; but they still continue, when they arise from criminal causes. All moveables belonging to the rebel at the time of his rebellion, (whether proceeding upon denunciation, or sentence in a criminal trial), and all that shall be afterwards acquired by him until relaxation, fall under single escheat. Bonds bearing interest, because they continue heritable *quoad fructum*, fall not under it, nor such fruits of heritable subjects as became due after the term next ensuing the rebellion, these being reserved for the liferent escheat.

17. The king never retains the right of escheat to himself, but makes it over to a donatory, whose gift is not perfected, till, upon an action of general declarator, it be declared that the rebel's escheat has fallen to the crown by his denunciation, and that the right of it is now transferred to the pursuer by the gift in his favour. Every creditor therefore of the rebel, whose debt was contracted before rebellion, and who has used diligence before declarator, is preferable to the donatory. But the escheat cannot be affected by any debt contracted, nor by any voluntary deed of the rebel after rebellion.

18. The rebel, if he either pays the debt charged for, or suspends the diligence, may procure letters of relaxation from the horn, which, if published in the same place, and registered 15 days thereafter in the same register with the denunciation, have the effect to restore him to his former state; but they have no retrospect as to the moveables already fallen under escheat, without a special clause for that purpose.

19. The rebel, if he continues unrelaxed for year and day after rebellion, is construed to be civilly dead: and therefore, where he holds any feudal right, his superiors, as being without a vassal, are intitled, each of them, to the rents of such of the lands belonging to the rebel as hold of himself, during all the days of the rebel's natural life, by the casualty of **LIFERENT ES-CHEAT**; except where the denunciation proceeds upon treason or proper rebellion, in which case the liferent falls to the king.

20. It is that estate only, to which the rebel has a proper right of liferent in his own person, that falls under his liferent escheat.

21. Though neither the superior nor his donatory can enter into possession in consequence of this casualty, till decree of declarator; yet that decree, being truly declaratory, has a retrospect, and does not so properly confer a new right, as declare the right formerly constituted to the superior, by the civil death of his vassal. Hence, all charters or heritable bonds, though granted prior to the rebellion, and all adjudications, though led upon debts contracted before that period, are ineffectual against the liferent escheat, unless seisin be taken thereon within year and day after the granter's rebellion.

22. Here, as in single escheat, no debt contracted after rebellion can hurt the donatory, nor any voluntary right granted after that period, though in security or satisfaction of prior debts.

23. **DISCLAMATION** is that casualty whereby a vassal forfeits his whole feu to his superior, if he disowns or disclaims him, without ground, as to any part of it. **PURPRESTURE** draws likewise a forfeiture of the whole feu after it; and is incurred by the vassal's encroachment upon any part of his superior's property, or attempting by building, inclosing, or otherwise, to make it his own. In both these feudal delinquencies, the least colour of excuse saves the vassal.

24. All grants from the crown, whether charters, gifts of casualties, or others, proceed on signatures which pass the signet. When the king resided in Scotland, all signatures were superscribed by him; but, on the accession of James VI. to the crown of England, a cachet or seal was made, having the king's name engraved on it, in pursuance of an act of the privy-council, April 4. 1603, with which all signatures were to be afterwards sealed; that the lords of exchequer were empowered to pass; and these powers are transferred to the court of exchequer, which was established in Scotland after the union of the two kingdoms in 1707. Grants of higher consequence, as remissions of crimes, gifts proceeding upon forfeiture, and charters of *novodamus*, must have the king's sign manual for their warrant.

25. If lands holding of the crown were to be conveyed, the charter passed, before the union of the kingdoms in 1707, by the great seal of Scotland; and now by a seal substitute in place thereof. Grants of church dignities, during episcopacy, passed also by the great seal; and the commissions to all the principal officers of the crown, as Justice-Clerk, King's Advocate, Solicitor, &c. do so at this day. All rights which subjects may transmit by simple assignation, the king transmits by the privy-seal: as gifts of moveables, or of casualties that require no seisin. The quarter seal, otherwise called the *testimonial of the great seal*, is appended to gifts of tutory, commissions of brevies issuing from the chancery, and letters of presentation to lands holding of a subject, proceeding upon forfeiture, bastardy, or *ultimus heres*.

26. Seals are to royal grants what subscription is to rights derived from subjects, and give them authority; they serve also as a check to gifts procured (*subreptione vel obreptione*) by concealing the truth, or expressing a falsehood; for, where this appears, the gift may be stopped before passing the seals, though the signature should have been signed by the king. All rights passing under the great or privy seal must be registered

Law of Scotland. in the registers of the great or privy seal *respectivè*, before appending the seal.

places of strength, originally built for the defence of the country, either against foreign invasions or civil commotions; but these now pass with the lands in every charter.

clxvii SECT. VI. *Of the right which the vassal acquires by getting the feu.*

6. The vassal acquires right by his grant, not only to the lands specially contained in the charter, but to those that have been possessed 40 years as pertinent thereof. But, 1. If the lands in the grant are marked out by special limits, the vassal is circumscribed by the tenor of his own right, which excludes every subject without these limits from being pertinent of the lands. 2. A right possessed under an express investment is preferable, *ceteris paribus*, to one possessed only as pertinent. 3. Where neither party is invest *per expressum*, the mutual promiscuous possession by both, of a subject as pertinent, resolves into a commonty of the subject possessed: but if one of the parties has exercised all the acts of property of which the subject was capable, while the possession of the other was confined to pasturage only, or to calling feal and divot, the first is to be deemed sole proprietor, and the other to have merely a right of feuitude.

*Dominium utile.*

UNDER the *dominium utile* which the vassal acquires by the feudal right, is comprehended the property of whatever is considered as part of the lands, whether of houses, woods, inclosures, &c. above ground; or of coal, limestone, minerals, &c. under ground. Mills have, by the generality of our lawyers, been deemed a separate tenement, and so not carried by a charter or disposition, without either a special clause conveying mills, or the erection of the lands into a barony. Yet it is certain, that, if a proprietor builds a mill on his own lands, it will be carried by his entail, or by a retour, without mentioning it, although the lands are not erected into a barony. If the lands disposed be allotted, or thiled to another mill, the purchaser is not allowed to build a new corn-mill on his property, even though he should offer security that it shall not hurt the thirle; which is introduced for preventing daily temptations to fraud.

7. As barony is a *nomen universitatis*, and unites the several parts contained in it into one individual right, the general conveyance of a barony carries with it all the different tenements of which it consists, tho' they should not be specially enumerated (and this holds, even without erection into a barony, in lands that have been united under a special name). Hence, likewise, the possession by the vassal of the smallest part of the barony-lands preserves to him the right of the whole.

Regalia.

3. There are certain rights naturally consequent on property, which are deemed to be preserved by the crown as *regalia*; unless they be specially conveyed. Gold and silver mines are of this sort: the first universally; and the other, where three half-pennies of silver can be extracted from the pound of lead, by act 1424, (three half-pennies at that time was equal to about two shillings five pennies of our present Scots money). These were by our ancient law annexed to the crown; but they are now dissolved from it; and every proprietor is intitled to a grant of the mines within his own lands, with the burden of delivering to the crown a tenth of what shall be brought up.

8. The vassal is intitled, in consequence of his property, to levy the rents of his own lands, and to recover them from his tenants by an action for rent before his own court; and from all other possessors and intruders, by an action of mails and duties before the sheriff. He can also remove from his lands, tenants who have no leases; and he can grant tacks or leases to others. A tack is a contract of location, whereby the use of land, or any other immoveable subject, is set to the lessee or tackfman for a certain yearly rent, either in money, the fruits of the ground, or services. It ought to be reduced into writing, as it is a right concerning lands: tacks, therefore, that are given verbally, to endure for a term of years, are good against neither party for more than one year. An obligation to grant a tack is as effectual against the grantor as a formal tack. A liferenter, having a temporary property in the fruits, may grant tacks to endure for the term of his own liferent.

*Res publicæ.*

4. Salmon-fishing is likewise a right understood to be reserved by the crown, if it be not expressly granted: but 40 years possession thereof, where the lands are either erected into a barony, or granted with the general clause of fishings, establishes the full right of the salmon fishing in the vassal. A charter of lands, within which any of the king's forests lie, does not carry the property of such forest to the vassal.

5. All the subjects which were by the Roman law accounted *res publicæ*, as rivers, highways, ports, &c. are, since the introduction of feus, held to be *inter regalia*, or in *patrimonio principis*; and hence encroachment upon a highway is said to infer purpresture. No person has the right of a free port without a special grant, which implies a power in the grantee to levy anchorage and shore dues, and an obligation upon him to uphold the port in good condition. In this class of things, our forefathers reckoned fortalices, or small

9. The tackfman's right is limited to the fruits which spring up annually from the subject set, either naturally, or by his own industry; he is not therefore intitled to any of the growing timber above ground, and far less to the minerals, coal, clay, &c. under ground, the use of which consumes the substance. Tacks are, like other contracts, personal rights in their own nature; and consequently ineffectual against singular successors in the lands; but, for the encouragement of agriculture, they were, by act 1449, declared effectual to the tackfman for the full time of their endurance, into whose hands soever the lands might come.

10. To give a written tack the benefit of this statute,

it must mention the special tack-duty payable to the proprietor, which though small, if it be not elusory, secures the tacksmen; and it must be followed by possession, which supplies the want of a feisin. If a tack does not express the term of entry, the entry will commence at the next term after its date, agreeable to the rule, *Quod pure debetur, presenti die debetur*. If it does not mention the *ish*, i. e. the term at which it is to determine, it is good for one year only; but, if the intention of parties to continue it for more than one year, should appear from any clause in the tack (e. g. if the tacksmen should be bound to certain annual prestations), it is sustained for two years as the *minimum*. Tacks granted to perpetuity, or with an indefinite *ish*, have not the benefit of the statute. Tacks of houses within borough do not fall within this act, it being customary to let these from year to year.

11 Tacks necessarily imply a *delectus personæ*, a choice by the fetter of a proper person for his tenant. Hence the conveyance of a tack which is not granted to assignees, is ineffectual without the landlord's consent. A right of tack, though it be heritable, falls under the *jus mariti*, because it cannot be separated from the labouring cattle and implements of tillage, which are moveable subjects. A tack, therefore, granted to a single woman, without the liberty of assigning, falls by her marriage; because the marriage, which is a legal conveyance thereof to the husband, cannot be annulled. This implied exclusion of assignees is, however, limited to voluntary, and does not extend to necessary, assignments; as an adjudication of a tack by the tacksmen's creditor: but a tack, expressly excluding assignees, cannot be carried even by adjudication. It was not a fixed point for a long time, whether a tenant could sublet without consent of the landlord; but the court of session, in a case which occurred a few years ago, denied the power of subletting in the tenant. Life-rent tacks, because they import a higher degree of right in the tacksmen than tacks for a definite term, may be assigned, unless assignees be specially excluded.

12. If neither the fetter nor tacksmen shall properly discover their intention to have the tack dissolved at the term fixed for its expiration, they are understood, or presumed, to have entered into a new tack upon the same terms with the former, which is called *tacit relocation*; and continues till the landlord warns the tenant to remove, or the tenant renounces his tack to the landlord: this obtains also in the case of moveable tenants, who possess from year to year without written tacks. In judicial tacks, however, by the court of session, tacit relocation neither does nor can take place; for cautioners being interposed to these, they are looked at the end of the tack: and therefore, where judicial tacksmen possess after expiry of their right, they are accountable as factors.

13. In tacks of land, the fetter is commonly bound to put all the houses and office-houses, necessary for the farm, in good condition at the tenant's entry; and the tenant must keep them and leave them so at his removal. But, in tacks of houses, the fetter must not only deliver to the tenant the subject fet, in tenantable repair at his entry, but uphold it in that repair during the whole years of the tack, unless it is otherwise covenanted betwixt the parties.

14. If the inclemency of the weather, inundation, or calamity of war, should have brought upon the crop an extraordinary damage (*plus quam tolerabile*), the landlord had, by the Roman law, no claim for any part of the tack-duty: if the damage was more moderate, he might exact the full rent. It is nowhere defined, what degree of sterility or devastation makes a loss *plus quam tolerabile*; but the general rule of the Roman law seems to be made ours. Tenants are not obliged to pay any public burdens to which they are not expressly bound by their tack, except mill-services.

15. Tacks may be evacuated during their currency, (1.) In the same manner as feu-rights, by the tacksmen's running in arrear of his tack-duty for two years together. This irritancy may be prevented by the tenant's making payment at the bar before sentence.

(2.) Where the tenant either runs in arrear of one year's rent, or leaves his farm uncultivated at the usual season; in which case he may, by act of sederunt 1756, be ordained to give security for the arrears, and for the rent of the five following crops, if the tack shall subsist so long; otherwise, to remove, as if the tack were at an end. (3.) Tacks may be evacuated at any time by the mutual consent of parties.

16. The landlord, when he intends to remove a tenant whose tack is expiring, or who possesses without a tack, must, upon a precept signed by himself, warn the tenant forty days preceding the term of Whitfunday, at or immediately preceding the *ish*, personally, or at his dwelling-house, to remove at that term, with his family and effects. This precept must be also executed on the ground of the lands, and thereafter read in the parish-church where the lands lie, after the morning service, and affixed to the most patent door thereof. Whitfunday, though it be a moveable feast, is, in questions of removing, fixed to the 15th of May. In warnings from tenements within borough, it is sufficient that the tenant be warned forty days before the *ish* of the tack, whether it be Whitfunday or Martinmas; and in these the ceremony of chalking the door is sustained as warning, when proceeding upon a verbal order from the proprietor.

17. This process of warning was precisely necessary for founding an action of removing against tenants, till the act of sederunt 1756, which leaves it in the option of the proprietor, either to use the former method, or to bring his action of removing before the judge-ordinary; which, if it be called 40 days before the said term of Whitfunday, shall be held as equal to a warning. Where the tenant is bound, by an express clause of his tack, to remove at the *ish* without warning, such obligation is, by the said act, declared to be a sufficient warrant for letters of horning, upon which, if the landlord charge his tenant forty days before the said Whitfunday, the judge is authorised to eject him within six days after the term of removing expressed in the tack.

18. Actions of removing might, even before this act of sederunt, have been pursued without any previous warning (1.) Against vicious possessors, i. e. persons who had seized the possession by force, or who, without any legal title, had intruded into it, after the last possessor had given it up. (2.) Against possessors who had a naked tolerance. (3.) Against tenants who had run

Law of  
Scotland.

in arrear of rent, during the currency of their tacks. (4.) Against such as had sold their lands, and yet continued to possess after the term of the purchaser's entry. Upon the same ground, warning was not required, in removings against possessors of liferented lands, after the death of the liferenter who died in the natural possession: but if he possessé by tenants, these tenants could not be disturbed in their possessions till the next Whitsunday, that they might have time to look out for other farms; but they might be compelled to remove at that term, by an action of removing, without warning.

19. A landlord's title in a removing, let it be ever so lame, cannot be brought under question by a tenant whose tack flows immediately from him; but, if he is to insist against tenants not his own, his right must be perfected by infestment, unless it be such as requires no infestment; as terce, &c.

Violent  
profits.

20. The defender, in a removing, must (by act 1555), before offering any defence which is not instantly verified, give security to pay to the setter the *violent profits*, if they should be awarded against him. These are so called, because the law considers the tenant's possession after the warning as violent. They are estimated, in tenements within borough, to double the rent; and in lands, to the highest profits the pursuer could have made of them, by possessing them either by a tenant or by himself.

Effect of  
warning  
not insisted  
in.

21. If the action of removing shall be passed from, or if the landlord shall, after using warning, accept of rent from the tenant, for any term subsequent to that of the removal, he is presumed to have changed his mind, and tacit relocation takes place. All actions of removing against the principal or original tackfman, and decrees thereupon, if the order be used, which is set forth *supra* (17.), are, by the act of federunt 1756, declared to be effectual against the assignees to the tack or subtenants.

Hypothec.

22. The landlord has, in security of his tack-duty, over and above the tenant's personal obligation, a tacit pledge or hypothec, not only on the fruits, but on the cattle pasturing on the ground. The corn, and other fruits, are hypothecated for the rent of that year whereof they are the crop; for which they remain affected, though the landlord should not use his right for years together. In virtue of this hypothec, the landlord is intitled to a preference over any creditor, though he has actually used a pouding; except in the special case, that the pouding is executed after the term of payment, when the landlord can appropriate the crop for his payment, the pouding in such case being obliged to leave as much on the ground as to satisfy the landlord's hypothec: and it has been lately found, that this right of the landlord is preferable even to a debt due to the crown, for which a writ of extent had been issued: but the case here alluded to is presently under appeal.

N<sup>o</sup> 177.

23. The whole cattle on the ground, considered as a quantity, are hypothecated for a year's rent, one after another successively. The landlord may apply this hypothec for payment of the past year's rent, at any time within three months from the last conventional term of payment, after which it ceases for that year. As the tenant may increase the subject of this hypothec, by purchasing oxen, sheep, &c. so he can impair it, by selling part of his stock; but if the landlord suspects the tenant's management, he may, by sequestration or pouding, make his right, which was before general upon the whole stock, special upon every individual. A superior has also a hypothec for his feu-duty, of the same kind with that just explained.

24. In tacks of houses, breweries, shops, and other tenements, which have no natural fruits, the furniture and other goods brought into the subject set are hypothecated to the landlord for one year's rent. But the tenant may by sale impair this hypothec, as he might that of cattle in rural tenements; and indeed, in the particular case of a shop, the tenant rents it for no other purpose than as a place of sale.

#### SECT. VII. *Of the transmission of rights, by confirmation and resignation.*

A VASSAL may transmit his feu either to universal successors, as heirs; or to singular successors, *i. e.* those who acquire by gift, purchase, or other singular title. This last sort of transmission is either voluntary, by disposition; or necessary, by adjudication.

2. By the first feudal rules, no superior could be compelled to receive any vassal in the lands, other than the heir expressed in the investiture; for the superior alone had the power of ascertaining to what order of heirs the fee granted by himself was to descend. But this right of refusal in the superior did not take place, (1.) In the case of creditors appraisers or adjudgers, whom superiors were obliged to receive upon payment of a year's rent (1469, c. 37 1672, c. 19.): (2.) In the case of purchasers of bankrupt estates, who were put on the same footing with adjudgers by 1690, c. 20. The crown refuses no voluntary disponee, on his paying a composition to the exchequer of a sixth part of the valued rent. Now, by 20 Geo. II. superiors are directed to enter all singular successors (except incorporations) who shall have got from the vassal a disposition, containing procuratory of resignation; they always receiving the fees or casualties that law intitles them to on a vassal's entry, *i. e.* a year's rent (A).

3. Base rights, *i. e.* dispositions to be holden of the disponer, are transmissions only of the property, the superiority remaining as formerly. As this kind of right might, before establishing the registers, have been kept quite concealed from all but the granter and receiver, a public right was preferable to it, unless clothed.

(A) It was long matter of doubt how this composition due to the superior upon the entry of singular successors should be regulated. The matter at last received a solemn decision; finding, That the superior is intitled, for the entry of singular successors, in all cases where such entries are not taxed, to a year's rent of the subject, whether lands or houses, as the same are set, or may be set at the time; deducting the feu-duty and all public burdens, and likewise all annual burdens imposed on the lands by consent of the superior, with all reasonable annual repairs to houses and other perishable subjects.

cloathed with possession: but as this distinction was no longer necessary after the establishment of the records, all infeftments are declared preferable, according to the dates of their several registrations; without respect to the former distinction of base and public, or of being cloathed and not cloathed with possession.

4. Public rights, *i. e.* dispositions to be holden of the granter's superior, may be perfected either by confirmation or resignation; and therefore they generally contain both precept of feisin and procuratory of resignation. When the receiver is to complete his right in the first way, he takes feisin upon the precept: but such feisin is ineffectual without the superior's confirmation; for the disponee cannot be deemed a vassal till the superior receive him as such, or confirm the holding. By the usual style in the transmission of lands, the disposition contains an obligation and precept of infeftment, both *a me* and *de me*, in the option of the disponee; upon which, if feisin is taken indefinitely, it is construed in favour of the disponee to be a base infeftment, because a public right is null without confirmation: but if the receiver shall afterwards obtain the superior's confirmation, it is considered as if it had been from the beginning a public right.

5. Where two several public rights of the same subject are confirmed by the superior, their preference is governed by the dates of the confirmations, not of the infeftments confirmed; because it is the confirmation which completes a public right.

6. Though a public right becomes, by the superior's confirmation, valid from its date; yet if any mid impediment intervene betwixt that period and the confirmation, to hinder the two from being conjoined, *e. g.* if the granter of a public right should afterwards grant a base right to another, upon which feisin is taken before the superior's confirmation of the first, the confirmation will have effect only from its own date; and consequently the base right first completed will carry the *property* of the lands preferable to the public one.

7. Resignation is that form of law, by which a vassal surrenders his feu to his superior; and it is either *ad perpetuam remanentiam*, or *in favorem*. In resignations *ad remanentiam*, where the feu is resigned, to the effect that it may remain with the superior, the superior, who before had the superiority, acquires, by the resignation, the property also of the lands resigned: and as his infeftment in the lands still subsisted, notwithstanding the right by which he had given his vassal the property; therefore, upon the vassal's resignation, the superior's right of property revives, and is consolidated with the superiority, without the necessity of a new infeftment; but the instrument of resignation must be recorded.

8. Resignations *in favorem* are made, not with an intention that the property resigned should remain with the superior, but that it should be again given by him, in favour either of the resigner himself, or of a third party; consequently the fee remains in the resigner, till the person in whose favour resignation is made gets his right from the superior perfected by feisin. And because resignations *in favorem* are but incomplete personal deeds, our law has made no provision for recording them. Hence, the first feisin on a second resigna-

tion is preferable to the last feisin upon the first resignation; but the superior, accepting a second resignation, whereupon a prior feisin may be taken in prejudice of the first resignatory, is liable in damages.

9. By our former decisions, one who was vested with a personal right of lands, *i. e.* a right not completed by feisin, effectually divested himself by disposing it to another; after which no right remained in the disposer, which could be carried by a second disposition, because a personal right is no more than a *jus obligatio-nis*, which may be transferred by any deed sufficiently expressing the will of the granter. But this doctrine, at the same time that it rendered the security of the records extremely uncertain, was not truly applicable to such rights as required feisin to complete them; and therefore it now obtains, that the granter even of a personal right of lands is not so divested by conveying the right to one person, but that he may effectually make it over afterwards to another; and the preference between the two does not depend on the dates of the dispositions, but on the priority of the feisins following upon them.

#### SECT. VIII. Of Redeemable Rights.

clxix.

AS heritable right is said to be redeemable, when it contains a right of reversion, or return, in favour of the person from whom the right flows. Reversions are either legal, which arise from the law itself, as in adjudications, which law declares to be redeemable within a certain term after their date; or conventional, which are constituted by the agreement of parties, as in wadsets, rights of annualrent, and rights in security. A wadset (from wad or pledge) is a right, by which lands, or other heritable subjects, are impignora-ted by the proprietor to his creditor in security of his debt; and, like other heritable rights, is perfected by feisin. The debtor, who grants the wadset, and has the right of reversion, is called the *reverser*; and the creditor, receiver of the wadset, is called the *wad-setter*.

Reversions  
legal.

Wadset.

2. Wadsets, by the present practice, are commonly made out in the form of mutual contracts, in which one party sells the land, and the other grants the right of reversion. When the right of reversion is thus incorporated in the body of the wadset, it is effectual without registration; because the singular successor in the wadset is, in that case, sufficiently certified of the reversion, though it be not registered, by looking into his own right, which bears it *in gremio*. But where the right of reversion is granted in a separate writing, it is ineffectual against the singular successor of the wadsetter, unless it be registered in the register of feisins within 60 days after the date of the feisin upon the wadset.

3. Rights of reversion are generally esteemed *stricti juris*; yet they go to heirs, though heirs should not be mentioned, unless there be some clause in the right, discovering the intention of parties, that the reversion should be personal to the reverser himself. In like manner, though the right should not express a power to redeem from the wadsetter's heir, as well as from himself, redemption will be competent against the heir. All our lawyers have affirmed, that reversions cannot

Reversion  
*stricti juris*.

Law of  
Scotland.

be assigned, unless they are taken to assignees; but from the favour of legal diligence, they may be adjudged.

Redemp-  
tion.

4. Reversions commonly leave the reverser at liberty to redeem the lands *quandocunque*, without restriction in point of time; but a clause is adjoined to some reversions, that if the debt be not paid against a determinate day, the right of reversion shall be irritated, and the lands shall become the irredeemable property of the wadsetter. Nevertheless, the irritancy being penal, as in wadsets, where the sum lent falls always short of the value of the lands, the right of redemption is by indulgence continued to the reverser, even after the term has expired, while the irritancy is not declared. But the reverser, if he does not take the benefit of this indulgence within 40 years after the lapse of the term, is cut out of it by prescription.

5. If the reverser would redeem his lands, he must use an order of redemption against the wadsetter: the first step of which is premonition (or notice given under form of instrument) to the wadsetter, to appear at the time and place appointed by the reversion, then and there to receive payment of his debt, and thereupon to renounce his right of wadset. In the voluntary redemption of a right of wadset holden base, a renunciation duly registered re-establishes the reverser in the full right of the lands. Where the wadset was granted to be holden of the grantor's superior, the superior must receive the reverser, on payment of a year's rent, if he produce a disposition from the wadsetter, containing procuratory of resignation. If, at executing the wadset, the superior has granted letters of regrefs, *i. e.* an obligation again to enter the reverser upon redemption of the lands, he will be obliged to receive him, without payment of the year's rent. But letters of regrefs will not have this effect against singular successors in the superiority, if they are not registered in the register of reversions. All wadsets that remain personal rights, are extinguished by simple discharges, though they should not be recorded.

Letters of  
regrefs.Redemp-  
tion money.

6. If the wadsetter either does not appear at the time and place appointed, or refuses the redemption-money, the reverser must consign it under form of instrument, in the hands of the person appointed in the right of reversion; or, if no person be named, in the hands of the clerk to the bills, a clerk of session, or any responal person. An instrument of consignation, with the consignatory's receipt of the money consigned, completes the order of redemption, stops the farther currency of interest against the reverser, and founds him in an action for declaring the order to be formal, and the lands to be redeemed in consequence of it.

7. After decree of declarator is obtained, by which the lands are declared to return to the debtor, the consigned money, which comes in place of the lands, becomes the wadsetter's, who therefore can charge the consignatory upon letters of horning to deliver it up to him; but, because the reverser may, at any time before decree, pass from his order, as one may do from any other step of diligence, the consigned sums continue to belong to the reverser, and the wadsetter's interest in the wadset continues heritable till that period.

8. If the wadsetter chooses to have his money ra-

ther than the lands, he must require from the reverser, under form of instrument, the sums due by the wadset, in terms of the right. The wadset-sums continue heritable, notwithstanding requisition, which may be passed from by the wadsetter even after the reverser has consigned the redemption-money in consequence thereof.

9. Wadsets are either proper or improper. A pro-  
per wadset is that whereby it is agreed, that the use  
of the land shall go for the use of the money; so that  
the wadsetter takes his hazard of the rents, and enjoys  
them without accounting, in satisfaction, or *in solutum*  
of his interest.

10. In an improper wadset, the reverser, if the rent should fall short of the interest, is taken bound to make up the deficiency; if it amounts to more, the wadsetter is obliged to impute the exerecense towards extinction of the capital: And, as soon as the whole sum, principal and interest, are extinguished by the wadsetter's possession, he may be compelled to renounce, or divest himself in favour of the reverser.

11. If the wadsetter be intitled by his right to enjoy the rents without accounting, and if at the same time the reverser be subjected to the hazard of their deficiency, such contract is justly declared usurious: and also in all proper wadsets wherein any unreasonable advantage has been taken of the debtor, the wadsetter must (by act 1661), during the not requisition of the sum lent, either quit his possession to the debtor, upon his giving security to pay the interest, or subject himself to account for the surplus-rents, as in improper wadsets.

12. Insistments of annualrent, the nature of which  
has been explained, are also redeemable rights. A  
right of annualrent does not carry the property of the  
lands; but it creates a real *nexus* or burden upon the  
property, for payment of the interest or annualrent  
contained in the right; and consequently the bygone  
interests due upon it are *debita fundi*. The annualrenter  
may therefore either insist in a real action for ob-  
taining letters of poinding the ground, or sue the ten-  
ant in a personal action towards the payment of his  
past interest: and in a competition for those rents, the  
annualrenter's preference will not depend on his having  
used a poinding of the ground, for his right was com-  
pleted by the feisin; the power of poinding the ground,  
arising from that antecedent right, is *meræ facultatis*,  
and need not be exercised, if payment can be otherwise  
got. As it is only the interest of the sum lent which  
is a burden upon the lands, the annualrenter, if he  
wants his principal sum, cannot recover it either by  
poinding or by a personal action against the debtor's  
tenants; but must demand it from the debtor himself,  
on his personal obligation in the bond, either by requi-  
sition, or by a charge of letters of horning, according  
as the right is drawn.

13. Rights of annualrent, being servitudes upon the property, and consequently consistent with the right of property in the debtor, may be extinguished without requisition.

14. Insistments in security are another kind of re-  
deemable rights (now frequently used in place of rights  
of annualrent), by which the receivers are insist in the  
lands themselves, and not simply in an annualrent forth  
of them, for security of the principal sums, interest,  
and

Right  
securi

and penalty, contained in the rights. If an infefment in fequity be granted to a creditor, he may then upon enter into the immediate poffeffion of the lands or annualrent for his payment. They are extinguifhed as rights of annualrent.

15. All rights of annualrent, rights in fequity, and generally whatever constitutes a real burden on the fee, may be the ground of an adjudication, which is preferable to all adjudications, or other diligences, intervening between the date of the right and of the adjudication deduced on it; not only for the principal fum contained in the right, but alfo for the whole part intereft contained in the adjudication. This preference arifes from the nature of real debts, or *debita funta*: but in order to obtain it for the intereft of the intereft accumulated in the adjudication, fuch a judgment mult proceed on a procefs of pointing the ground.

SECT. IX. Of Servitudes.

SERVITUDE is a burden affecting lands, or other heritable fubjects, whereby the proprietor is either reftained from the full ufe of what is his own, or is obliged to fuffir another to do fomething upon it. Servitudes are either *natural, legal, or conventional*. Nature itfelf may be fud to constitute a fervitude upon inferior tenements, whereby they mult receive the water that falls from thofe that ftand on higher ground. *Legal* fervitudes are eftablifhed by ftatute or cuftom, from confiderations of public policy; among which may be numbered the reftraints laid upon the proprietors of tenements within the city of Edinburgh. There is as great a variety of *conventional* fervitudes, as there are ways by which the exercife of property may be reftained by paction in favour of another.

2. *Conventional* fervitudes are constituted, either by grant, where the will of the party burdened is expreffed in writing: or by prefcription, where his confent is prefumed from his acquiefcence in the burden for 40 years. A fervitude constituted by writing, or grant, is not effectual againft the grantor's fingular fucceffors, unlefs the grantee has been in the ufe or exercife of his right: but they are valid againft the grantor and his heirs, even without ufe. In fervitudes that may be acquired by prefcription, 40 years exercife of the right is fufficient, without any title in writing, other than a charter and feifin of the lands to which the fervitude is claimed to be due.

3. Servitudes constituted by grant are not effectual, in a queftion with the fuperior of the tenement burdened with the fervitude, unlefs his confent be adhibited; for a fuperior cannot be hurt by his vaffal's deed: but where the fervitude is acquired by prefcription, the confent of the fuperior, whofe right afforded him a good title to interrupt, is implied. A fervitude by grant, though followed only by a partial poffeffion, mult be governed, as to its extent, by the tenor of the grant; but a fervitude by prefcription is limited by the meafure or degree of the ufe had by him who prefcribes: agreeably to the maxim, *Tantum prefcriptum, quantum poffeffum*.

4. Servitudes are either *predial* or *perfonal*. *Predial* fervitudes are burdens impofed upon one tenement, in favour of another tenement. That to which the servi-

tude is due is called the *dominant*, and that which owes it is called the *fevient tenement*. No perfon can have right to a predial fervitude, if he is not proprietor of fome dominant tenement that may have benefit by it; for that right is annexed to a tenement, and fo cannot pafs from one perfon to another, unlefs fome tenement goes along with it.

5. Predial fervitudes are divided into *rural* fervitudes, or of lands; and *urban* fervitudes, or of houfes. The rural fervitudes of the Romans were *iter, actus, via, aqueductus, aqueductus, and jus pascendi pecoris*. Similar fervitudes may be constituted with us, of a foot-road, horfe road, cart-road, dains, and aqueducts, watering of cattle, and paffurage. The right of a highway is not a fervitude conftituted in favour of a particular tenement, but is a right common to all travellers. The care of high-ways, bridges, and ferries, is committed to the fheriffs, juftices of peace, and commiffioners of fupply in each fhire.

6. Common paffurage, or the right of feeding one's cattle upon the property of another, is fometimes conftituted by a general claufe of paffurage in a charter or difpofition, without mentioning the lands burdened; in which cafe, the right comprehends whatever had been formerly appropriated to the lands difpofed out of the grantor's own property, and likewise all paffurage due to them out of other lands. When a right of paffurage is given to feveral neighbouring proprietors, on a moor or common belonging to the grantor, indefinite as to the number of cattle to be paffured, the extent of their feveral rights is to be proportioned according to the number that each of them can fodder in winter upon his own dominant tenement.

7. The chief fervitudes of houfes among the Romans were thofe of fupport, viz. *ignis immittendi, and oneris ferendi*. The firft was the right of fixing in our neighbours wall a joift or beam from our houfe: the fecond was that of refting the weight of one's houfe upon his neighbour's wall.

8. With us, where different floors or ftories of the fame houfe belong to different perfons, as is frequent in the city of Edinburgh, the property of the houfe cannot be fud to be entirely divided; the roof remains a common roof to the whole, and the area on which the houfe ftands fupports the whole; fo that there is a communication of property, in confequence of which the proprietor of the ground-floor mult, without the conftitution of any fervitude, uphold it for the fupport of the upper, and the owner of the higheft ftory mult uphold that as a cover to the lower. When the higheft floor is divided into garrets among the feveral proprietors, each proprietor is obliged, according to this rule, to uphold that part of the roof which covers his own garret.

9. No proprietor can build, fo as to throw the rain-water falling from his own houfe, immediately upon his neighbour's ground, without a fpecial fervitude, which is called of *ftillside*; but, if it falls within his own property, though at the fmalleft diftance from the march, the owner of the inferior tenement mult receive it.

10. The fervitudes *altius non tollendi, et non officendi luminibus vel profpectui*, reftrain proprietors from railing their houfes beyond a certain height, or from making any building whatsoever that may hurt the light

Law of  
Scotland.

or prospect of the dominant tenement. These servitudes cannot be constituted by prescription alone: for, though a proprietor should have his house ever so low, or should not have built at all upon his grounds for 40 years together, he is presumed to have done so for his own conveniency or profit; and therefore cannot be barred from afterwards building a house on his property, or raising it to what height he pleases, unless he be tied down by his own consent.

Servitude of  
feal and di-  
vot.

11. We have two predial servitudes to which the Romans were strangers, viz. that of fuel or feal and divot, and of thirlage. The first is a right, by which the owner of the dominant tenement may turn up peats, turfs, seals, or divots, from the ground of the servient, and carry them off either for fuel, or thatch, or the other uses of his own tenement.

Thirlage.

12. THIRLAGE is that servitude, by which lands are astricted, or thirled, to a particular mill; and the possessors bound to grind their grain there, for payment of certain multure and sequels as the agreed price of grinding. In this servitude, the mill is the dominant tenement, and the lands astricted (which are called *a'fo the thirl or sucken*) the servient. Multure is the quantity of grain or meal payable to the proprietor of the mill, or to the multerer his tacksmen. The sequels are the small quantities given to the servants, under the name of *knave'ship, bannock, and lock or gospen*. The quantities paid to the mill by the lands not astricted, are generally proportioned to the value of the labour, and are called *out town or out sucken multure*; but those paid by the thirl are ordinarily higher, and are called *in town or in sucken multure*.

13. Thirlage may be constituted by a land-holder, when, in the disposition of certain lands, he astricts them to his own mill; or when, in the disposition of a mill, he astricts his own lands to the mill disposed; or when, in letting his lands, he makes it a condition in the tacks. The grant of a mill with the general clause of multure, without specifying the lands astricted, conveys the thirlage of all the lands formerly astricted to that mill, whether they were the property of the grantor, or of a third party.

14. A less formal constitution serves to astrict barony-lands to the mill of the barony, than is necessary in any other thirlage; which perhaps proceeds from the effects of the union betwixt the two. Hence, if a baron makes over the mill of a barony, *cum multuris*, or *cum astrictis multuris*, it infers an astriction of the barony lands to the mill conveyed, although they had not formerly been astricted. But if, prior to the baron's conveyance of his mill *cum multuris*, he had sold any part of the barony-lands to another *cum multuris*, the first purchaser's lands are not astricted by the posterior grant; for a right of lands with the multure, implies a freedom of these lands from thirlage.

15. Thirlage is either, 1. Of grindable corns; or, 2. Of all growing corns; or, 3. Of the *inveeta et illata*, i. e. of all the grain brought within the thirl, though of another growth. Where the thirlage is of grindable grain, it is in practice restricted to the corns which the tenants have occasion to grind, either for the support of their families, or for other uses; the surplus may be carried out of the thirl unmanufactured, without being liable in multure. Where it is of the *grana crescentia*, the whole grain growing upon the thirl is

astrieted, with the exceptions, 1. Of seed and horse-corn, which are destined to uses inconsistent with grinding; and, 2. Of the farm duties due to the landlord, if they are delivered in grain not grinded. But, if the rent be payable in meal, flour, or malt, the grain of which these are made must be manufactured in the dominant mill.

16. The thirlage of *inveeta et illata* is seldom constituted but against the inhabitants of a borough or village, that they shall grind all the unmanufactured grain they import thither at the dominant mill. Multure, therefore, cannot be exacted in a thirlage of *inveeta et illata*, for flour or oat-meal brought into the servient tenement, unless the importer had bought it in grain, and grinded it at another mill. The same grain that owes multure, as *granum crescens*, to the mill in whose thirl it grew, if it shall be afterwards brought within a borough where the *inveeta et illata* are thirled, must pay a second multure to the proprietor of that dominant tenement; but, where the right of these two thirlages is in the same proprietor, he cannot exact both. Where lands are thirled in general terms, without expressing the particular nature of the servitude, the lightest thirlage is presumed, from the favour of liberty; but in the astriction of a borough or village, where there is no growing grain which can be the subject of thirlage, the astriction of *inveeta et illata* must be necessarily understood.

17. Thirlage, in the general case, cannot be established by prescription alone, for *ius que sunt mere facultatis non prescribitur*; but where one has paid for 40 years together the heavy untackn multure, the slightest title in writing will subject his lands. Thirlage may, contrary to the common rule, be constituted by prescription alone, 1. Where one pays to a mill a certain sum, or quantity of grain yearly, in name of multure, whether he grinds at it or not, (called *dry multure*). 2. In mills of the king's property; which is constituted *jure coronæ*, without titles in writing; and, where he derives right from another, his titles are more liable to be lost. This is extended in practice to mills belonging to church-lands, where thirty years possession is deemed equivalent to a title in writing, from a presumption that their rights were destroyed at the reformation. Though thirlage itself cannot be constituted by mere possession, the proportion of multure payable to the dominant tenement may be so fixed.

18. The possessors of the lands astricted are bound to uphold the mill, repair the dam-dykes and aqueducts, and bring home the millstones. These services, though not expressed in the constitution, are implied.

19. Servitudes, being restraints upon property, are *stricti juris*: they are not therefore presumed, if the acts upon which they are claimed can be explained consistently with freedom; and, when servitudes are constituted, they ought to be used in the way least burdensome to the servient tenement. Hence, one who has a servitude of peats upon his neighbour's moss, is not at liberty to extend it for the use of any manufacture which may require an extraordinary expence of fuel; but must confine it to the natural uses of the dominant tenement.

20. Servitudes are extinguished, (1.) *Confusione*, when the person comes to be proprietor of the dominant

Law  
Scotti

Servi  
are, str  
ris.

nant and fervient tenements; for *res sua non nisi servit*, and the use the proprietor thereafter makes of the fervient tenement is not *jure servitutis*, but is an act of property. (2) By the perishing either of the dominant or fervient tenement. (3.) Servitudes are lost *non utendo*, by the dominant tenement neglecting to use the right for 40 years; which is considered as a dereliction of it, though he who has the fervient tenement should have made no interruption by doing acts contrary to the servitude.

21. *Personal servitudes* are those by which the property of a subject is burdened, in favour, not of a tenement, but of a person. The only personal servitude known in our law, is usufruct or liferent; which is a right to use and enjoy a thing during life, the subsistence of it being preserved. A liferent cannot therefore be constituted upon things which perish in the use; and though it may upon subjects which gradually wear out by time, as household furniture, &c. yet with us, it is generally applied to heritable subjects. He whose property is burdened, is usually called the *fiar*.

22. Liferents are divided into *conventional* and *legal*. *Conventional* liferents are either *simple*, or by *reservation*. A *simple liferent*, or by a separate constitution, is that which is granted by the proprietor in favour of another: And this sort, contrary to the nature of predial servitudes, requires *seisin* in order to affect singular successors; for a liferent of lands is, in strict speech, not a servitude, but a right resembling property which constitutes the liferenter *vassal* for life; and singular successors have no way of discovering a liferent-right, which perhaps is not yet commenced, but by the records; whereas, in predial servitudes, the constant use of the dominant tenement makes them public. The proper right of liferent is intransmissible; *officibus usufructuarii inheret*: When the profits of the liferented subject are transmitted to another, the right becomes merely personal: for it intitles the assignee to the rent, not during his own life, but his cedent's; and is therefore carried by simple assignation, without *seisin*.

23. A liferent *by reservation*, is that which a proprietor reserves to himself in the same writing by which he conveys the fee to another. It requires no *seisin*; for the grantor's former *seisin*, which virtually included the liferent, still subsists as to the liferent which is expressly reserved. In conjunct infeftments taken to husband and wife, the wife's right of conjunct fee resolves, in the general case, into a liferent.

24. Liferents, *by law*, are the *terce* and the *courtesy*. The *terce* (*tertia*) is a liferent competent by law to widows, who have not accepted of special provisions, in the third of the heritable subjects in which their husbands died infeft; and takes place only where

the marriage has subsisted for year and day, or where a child has been born alive of it (A).

25. The *terce* is not limited to lands, but extends to tenements, and to servitudes and other burdens affecting lands; thus, the widow is intitled, in the right of her *terce*, to a liferent of the third of the sums secured, either by rights of annualrent, or by rights in security. In improper wadsets, the *terce* is a third of the sum lent: In those that are proper, it is a third of the wadset lands; or, in case of redemption, a third of the redemption money. Neither rights of reversion superiority, nor patronage, fall under the *terce*; for none of these have fixed profits, and so are not proper subjects for the widow's subsistence; nor tacks, because they are not feudal rights. Burgage tenements are also excluded from it, the reason of which is not so obvious. Since the husband's *seisin* is both the measure and security of the *terce*, such debts or diligences alone, as exclude the husband's *seisin*, can prevail over it.

26. Where a *terce* is due out of lands burdened with a prior *terce* still subsisting, the second *tercer* has only right to a third of the two thirds that remain unaffected by the first *terce*. But upon the death of the first widow, whereby the lands are disburdened of her *terce*, the lesser *terce* becomes enlarged, as if the first had never existed. A widow, who has accepted of a special provision from her husband, is thereby excluded from the *terce*, unless such provision shall contain a clause that she shall have right to both.

27. The widow has no title of possession, and so cannot receive the rents in virtue of her *terce*, till she be served to it; and in order to this, she must obtain a brief out of the chancery, directed to the sheriff, who calls an inquest, to take proof that she was wife to the deceased, and that her husband died infeft in the subjects contained in the brief. The service or sentence of the jury, finding these points proved, does, without the necessity of a return to the chancery, intitle the wife to enter into the possession; but she can only possess with the heir *pro indiviso*, and so cannot remove tenants till the sheriff kens her to her *terce*, or divides the lands between her and the heir. In this division, after determining by lot or *kavil*, whether to begin by the sun or the shade, *i. e.* by the east or the west, the sheriff sets off the two first acres for the heir, and the third for the widow. Sometimes the division is executed, by giving one entire farm to the widow, and two of equal value to the heir. The widow's right is not properly constituted by this service; it was constituted before by the husband's *seisin*, and fixed by his death; the service only declares it, and so intitles her to the third part of the rents *retro* to her husband's death, preferable to any rights that may have affected the lands in the intermediate period between that and her own

(A) In the case referred to, when treating of the effects of the dissolution of marriage within the year without a living child, and where no special provisions had been granted to, or accepted by, the widow; she did not demand her legal provisions of *terce* or *jus relictae*, but merely insisted, that as widow she was intitled to be alimented out of the heritable estate of which her husband died possessed: So that the decision in that case cannot so properly be said to be an alteration in the law, as an equitable interposition of the court of session, in their capacity as a court of equity, in order to grant a subsistence to the widow of a man whose estate was fully sufficient, and who, it could not reasonably be presumed, would have inclined that his widow should be left destitute, when his estate went perhaps to a distant series of heirs.

Scotland.

Courtesy.

own fee. The relief, if she was reputed to be lawful wife to the deceased, must be seized, notwithstanding any objections by the heir against the marriage, which may be afterwards tried by the commissary.

28. *Courtesy* is a life-ent given by law, to the surviving husband, of all his wife's heritage in which she died intestate, if there was a child of the marriage born alive. A marriage, though of the longest continuance, gives no right to the courtesy, if there was no issue of it. The child born of the marriage must be the mother's heir: If she had a child of the former marriage, who is to succeed to her estate, the husband has no right to the courtesy while such child is alive; so that the courtesy is due to the husband, rather as father to an heir, than as husband to an heiress. Heritage is here opposed to conquest; and so is to be understood only of the heritable rights to which the wife succeeded as heir to her ancestors, excluding what she herself had acquired by singular titles.

29. Because the husband enjoys the life-ent of his wife's whole heritage, on a lactative title, he is considered as her temporary representative; and so is liable in payment of all the yearly burdens chargeable on the subject, and of the current interest of all her debts, real and personal, to the value of the yearly rent he enjoys by the courtesy. The courtesy needs no solemnity to its constitution: That right which the husband had to the rents of his wife's estate during the marriage, *jure mariti*, is continued with him after her death, under the name of *courtesy*, by an act of the law itself. As in the terce, the husband's seisin is the ground and measure of the wife's right; so in the courtesy, the wife's seisin is the foundation of the husband's; and the two rights are, in all other respects, of the same nature; if it is not that the courtesy extends to burgage holdings, and to superiorities.

30. All life-enters must use their right *suave rei substantia*: whatever therefore is part of the fee itself, cannot be incroached on by the life-ent, e. g. woods or growing timber, even for the necessary uses of the life-ent tenement. But, where a coppice or *silva cadua* has been divided into hags, one of which was in use to be cut annually by the proprietor, the life-ent may continue the former yearly cuttings; because these are considered as the annual fruits the subject was intended to yield, and so the proper subject of a life-ent.

31. Life-enters are bound to keep the subject life-ent in proper repair. They are also burdened with the alimony of the heir, where he has not enough for maintaining himself. The bare right of apparenay founds the action against the life-ent. It is a burden personal to the life-ent himself, and cannot be thrown upon his adjudging creditors as coming in his place by their diligences. Life-enters are also subjected to the payment of the yearly cesses, stipends, &c. falling due during their right, and to all other burdens that attend the subject life-ent.

32. Life-ent is extinguished by the life-ent's death. That part of the rents which the life-ent had a proper right to, before his death, falls to his executors; the rest, as never having been *in bonis* of the deceased, goes to the heir. Martinmas and Whitsunday are, by our custom, the legal terms of the payment of rent: consequently, if a life-ent of lands survives the term of Whitsunday, his executors are intitled to the half

of that year's rent, because it was due the term before his death; and if he survives the term of Martinmas, they have right to the whole. If the life-ent, being in the natural possession, and having first sowed the ground, should die, even before Whitsunday, his executors are intitled to the whole crop, in respect that both seed and industry were his. In a life-ent of money constituted by a moveable bond, the executors have a right to the interest, down to the very day of the life-ent's death, where no terms are mentioned for the payment thereof; but in the case of an heritable bond, or of a money life-ent secured on land, the interests of life-ent and heir (or of heir and executor, for the same rules serve to fix the interests of both) are both governed by the legal terms of land-ent, without regard to the conventionit.

## SECT. X. Of Teinds.

cixxi.

TEINDS, or tithes, are that liquid proportion of our rents or goods, which is due to churchmen, for performing divine service, or exercising the other spiritual functions proper to their several offices. Most of the canonists think, that the precise proportion of a tenth, not only of the fruits of the ground, but of what is acquired by personal industry, is due to the Christian clergy, of divine right, which they therefore call the *propter patriam of the church*; though it is certain that tithes, in their infancy, were given, not to the clergy alone, but to lay monks who were called *pauperes*, and to other indigent persons. Charles the Great was the first secular prince who acknowledged this right in the church. It appears to have been received with us, as far back as David I.

2. The person employed by a cathedral church or monastery to serve the cure in any church annexed was called a *vicar*, because he held the church, not in his own right, but in the right or *vice* of his employers; and so was removeable at pleasure, and had no share of the benefice, other than what they thought fit to allow him: but, in the course of time, the appellation of *vicar* was limited to those who were made perpetual, and who got a stated share of the benefice for their incumbency; from whence arose the distinction of benefices into parsonages and vicarages.

3. Parsonage teinds are the teinds of corn; and they are so called because they are due to the parson or other titular of the benefice. Vicarage teinds are the small teinds of calves, fat, hemp, eggs, &c. which were commonly given by the titular to the vicar who served the cure in his place. The first sort was universally due, unless in the case of their infeudation to laics, or of a pontifical exemption; but, by the customs of almost all Christendom, the lesser teinds were not demanded where they had not been in use to be paid. By the practice of Scotland, the teinds of animals, or of things produced from animals, as lambs, wool, calves, are due though not accustomed to be paid; but roots, herbs, &c. are not tithable, unless use of payment be proved: neither are personal teinds (*i. e.* the tenth of what one acquires by his own industry) acknowledged by our law: yet they have been found due, when supported by 40 years possession.

4. The parson who was intitled to the teind of corns, made his right effectual, either by accepting of a certain

tain number of teind-bolls yearly from the proprietor in satisfaction of it; or, more frequently, by drawing or separating upon the field his own tenth part of the corns, after they were reaped, from the flock or the remaining nine-tenths of the crop, and carrying it off to his own granaries; which is called *drawn teind*.

5. After the reformation, James VI. considered himself as proprietor of all the church-lands; partly because the papists for which they had been granted were declared superstitious; and partly, in consequence of the resignation which he, and queen Mary his mother, had procured from the beneficiaries; and even as to the teinds, though our reformed clergy also claimed them as the patrimony of the church, our sovereign did not submit to that doctrine farther than extended to a competent provision for ministers. He therefore erected or secularised several abbeys and priories into temporal lordships; the grantees of which were called sometimes *lords of erection*, and sometimes *titulars*, as having by their grants the same title to the erected benefices that the monasteries had formerly.

6. As the crown's revenue suffered greatly by these erections, the temporality of all church benefices (*i. e.* church lands) was, by 1587. c. 29. annexed to the crown. That statute excepts from the annexation such benefices as were established before the reformation in laymen, whose rights the legislature had no intention to weaken. Notwithstanding this statute, his majesty continued to make farther erections, which were declared null by 1592. c. 119. with an exception of such as had been made in favour of lords of parliament since the general act of annexation in 1587.

7. King Charles I. soon after his succession, raised a reduction of all these erections, whether granted before or after the act of annexation, upon the grounds mentioned at length by Mr Forbes in his treatise of tithes, p. 259. At last the whole matter was referred to the king himself by four several submissions or compromises; in which the parties on one side were the titulars and their tacksmen, the bishops with the inferior clergy, and the royal boroughs, for the interest they had in the teinds that were gifted for the provision of ministers, schools, or hospitals within their boroughs; and, on the other part, the proprietors who wanted to have the leading of their own teinds. The submission by the titulars contained a surrender into his majesty's hands of the superiorities of their several erections.

8. Upon each of these submissions his majesty pronounced separate decrees-arbitral, dated Sept. 2. 1629, which are subjoined to the acts of parliament of his reign. He made it lawful to proprietors to sue the titulars for a valuation, and if they thought fit for a sale also, of their teinds, before the commissioners named or to be named for that purpose. The rate of teind, when it was possessed by the proprietor jointly with the flock, for payment of a certain duty to the titular, and so did not admit a separate valuation, was fixed at a fifth part of the constant yearly rent, which was accounted a reasonable *furrogatum*, in place of a tenth of the increase. Where it was drawn by the titular, and consequently might be valued separately from the flock, it was to be valued as its extent should be ascertained upon a proof before the commissioners; but in this last valuation, the king directed the fifth part to be deducted from the proved teind, in favour of the proprietor,

which was therefore called the *king's case*. The proprietor suing for a valuation gets the leading of his own teinds as soon as his suit commences, providing he does not allow intercession to be extracted against him for not insisting.

9. Where the proprietor insisted also for a sale of his teinds, the titular was obliged to sell them at nine years purchase of the valued teind-duty. If the purchaser had a tack of his own teinds, not yet expired; or if the defender was only tacksmen of the teind, and so could not give the purchaser an heritable right; an abatement of the price was to be granted accordingly by the commissioners.

10. There is no provision in the decrees-arbitral, for selling the teinds granted for the sustentation of ministers, universities, schools, or hospitals; because these were to continue, as a perpetual fund, for the maintenance of the persons or societies to whom they were appropriated; and they are expressly declared not subject to sale, by 1690. c. 30.—1693. c. 23. By the last of these acts, it is also provided, that the teinds belonging to bishops, which had then fallen to the crown upon the abolishing of episcopacy, should not be subject to sale as long as they remained with the crown not disposed of; nor those which the proprietor, who had right both to stock and teind, reserved to himself in a sale or feu of the lands. But, though none of these teinds can be sold, they may be valued.

11. The king, by the decrees-arbitral, declared his own right to the superiorities of erection which had been resigned to him by the submission, reserving to the titulars the feu duties thereof, until payment by himself to them of 1000 merks Scots for every chaldron of feu-victual, and for each 100 merks of feu-duty; which right of redeeming the feu-duties was afterwards renounced by the crown. If the church-vassal should consent to hold his lands of the titular, he cannot thereafter recur to the crown as his immediate superior.

12. In explaining what the constant rent is by which the teind must be valued, the following rules are observed. The rent drawn by the proprietor from the sale of subjects, that are more properly parts of the land than of the fruits, *e. g.* quarries, minerals, mosses, &c. is to be deducted from the rental of the lands; and also the rent of supernumerary houses, over and above what is necessary for agriculture; and the additional rent that may be paid by the tenant, in consideration of the proprietor's undertaking any burden that law imposes on the tenant, *e. g.* holding the tenant's houses, because none of these articles are paid properly on account of the fruits. Orchards must also be deducted, and mill-rent, because the profits of a mill arise from industry; and the corns manufactured there suffer a valuation as rent payable by the tenant, and therefore ought not to be valued a second time against the titular as mill-rent. The yearly expence of culture ought not to be deducted; for no rent can be produced without it; but, if an improvement of rent is made at an uncommon expence, *e. g.* by draining a lake, the proprietor is allowed a reasonable abatement on that account.

13. Notwithstanding the several ways of misapplying parochial teinds in the times of Popery, some few deaneries, benefices remained entire in the hands of the parsons, &c.

The

Law of  
Scotland.

The ministers planted in these, after the reformation, continued to have the full right to them, as proper beneficiaries: but a power was afterwards granted to the patron, to redeem the whole teind from such beneficiaries, upon their getting a competent stipend modified to them; which teind so redeemed, the patron is obliged to sell to the proprietor, at six years purchase.

14. Some teinds are more directly subject to an allocation for the minister's stipend than others. The teinds in the hands of the lay titular fall first to be allocated, who, since he is not capable to serve the cure in his own person, ought to provide one who can; and if the titular, in place of drawing the teind, has set it in tack, the tack-duty is allocated: this sort is called *free teind*. Where the tack-duty, which is the titular's interest in the teinds, falls short, the tack itself is burdened, or, in other words, the surplus teind over and above the tack-duty: but, in this case, the commissioners are empowered to recompense the tackfman, by prorogating his tack for such a number of years as they shall judge equitable. Where this likewise proves deficient, the allocation falls on the teinds heritably conveyed by the titular, unless he has warranted his grant against future augmentations; in which case, the teinds of the lands belonging in property to the titular himself must be allocated in the first place.

15. Where there is sufficiency of free teinds in a parish, the titular may allocate any of them he shall think fit for the minister's stipend, since they are all his own; unless there has been a previous decree of locality: and this holds, though the stipend should have been paid immemorably out of the teinds of certain particular lands. This right was frequently abused by titulars, who, as soon as a proprietor had brought an action of sale of his teinds, allocated the pursuer's full teind for the stipend, whereby such action became ineffectual: it was therefore provided, that after citation in a sale of teinds, it shall not be in the titular's power to allocate the pursuer's teinds solely, but only in proportion with the other teinds in the parish.

Ministers  
glebes, &c.  
exempted  
from teinds.

16. Ministers glebes are declared free from the payment of teind. Lands *cum decimis inclusis* are also exempted from teind. But in order to exempt lands from payment of teind, it is necessary that the proprietor prove his right thereto, *cum decimis inclusis*, as far back as the above act of annexation 1587.

17. Teinds are *debita fructuum*, not *fundi*. The action therefore for bygone teinds is only personal, against those who have intermeddled, unless where the titular is insect in the lands, in security of the valued teind duty. Where a tenant is, by his tack, bound to pay a joint duty to the landlord for stock and teind, without distinguishing the rent of each, his defence of a *bona fide* payment of the whole to the landlord has been sustained in a suit at the instance of a laic titular, but repelled where a churchman was pursuer. In both cases the proprietor who receives such rent is liable as intermeddler.

Inhibition  
of teinds.

18. In tacks of teinds, as of lands, there is place for tacit relocation: to stop the effect of which, the titular must obtain and execute an inhibition of teinds against the tackfman; which differs much from inhibition of lands (explained under the next section), and

N<sup>o</sup> 177.

is intended merely to interpel or inhibit the tackfman from farther intermeddling. This diligence of inhibition may also be used at the suit of the titular, against any other possessor of the teinds; and if the tackfman or possessor shall intermeddle after the inhibition is executed, he is liable in a *spuilzie*.

Law of  
Scotland.

19. Lands and teinds pass by different titles: a disposition of lands, therefore, though granted by one who has also right to the teind, will not carry the teind, unless it shall appear from special circumstances that a sale of both was designed by the parties. In lands *cum decimis inclusis*, where the teinds are consolidated with the stock, the right of both must necessarily go together in all cases.

## SECT. XI. Of inhibitions.

THE constitution and transmission of feudal rights, and the burdens with which they are chargeable, being now explained, it remains to be considered how these rights may be affected at the suit of creditors by legal diligence. Diligences are certain forms of law, whereby a creditor endeavours to make good his payment, either by affecting the person of his debtor, or by securing the subjects belonging to him from alienation, or by carrying the property of these subjects to himself. They are either real or personal. Real diligence is that which is proper to heritable or real rights; personal, is that by which the person of the debtor may be secured, or his personal estate affected. Of the first sort we have two, *viz.* inhibition and adjudication.

clxvii

Diligence

2. *Inhibition* is a personal prohibition, which passes by letters under the signet, prohibiting the party inhibited to contract any debt, or do any deed, by which any part of his lands may be aliened or carried off in prejudice of the creditor inhibiting. It must be executed against the debtor, personally, or at his dwelling-house, as *summonses*, and thereafter published and registered in the same manner with interdictions, (see N<sup>o</sup> clxxxiii. 21.)

Inhibition

3. *Inhibition* may proceed, either upon a liquid obligation, or even on an action commenced by a creditor for making good a claim not yet sustained by the judge; which last is called *inhibition upon a depending action*. The *summons*, which constitutes the dependence, must be executed against the debtor before the letters of inhibition pass the signet; for no suit can be said to depend against one till he be cited in it as a defender: but the effect of such inhibition is suspended till decree be obtained in the action against the debtor; and in the same manner, inhibitions on conditional debts have no effect till the condition be purified. Inhibitions are not granted, without a trial of the cause, when they proceed on conditional debts. And though, in other cases, inhibitions now pass of course, the lords are in use to stay, or recal them, either on the debtor's showing cause why the diligence should not proceed, or even *ex officio* where the ground of the diligence is doubtful.

4. Though inhibitions, by their uniform style, disable the debtor from selling his moveable as well as his heritable estate, their effect has been long limited to heritage, from the interruption that such an embargo upon moveables must have given to commerce; fo

Limited  
heritage

v of  
land.

so that debts contracted after inhibition may be the foundation of diligence against the debtor's person and moveable estate. An inhibition secures the inhibitor against the alienation, not only of lands that belonged to his debtor when he was inhibited, but of those that he shall afterwards acquire: but no inhibition can extend to such after-purchases as lie in a jurisdiction where the inhibition was not registered; for it could not have extended to these though they had been made prior to the inhibition.

5. This diligence only strikes against the voluntary debts or deeds of the inhibited person: it does not restrain him from granting necessary deeds. *i. e.* such as he was obliged to grant anterior to the inhibition, since he might have been compelled to grant these before the inhibitor had acquired any right by his diligence. By this rule, a wadsetter or annual-renter might, after being inhibited, have effectually renounced his right to the reverser on payment, because law could have compelled him to it; but to secure inhibitors against the effect of such alienations, it is declared by act of federunt of the court of session, Feb. 19. 1680, that, after intimation of the inhibition to the reverser, no renunciation or grant of redemption shall be sustained, except upon declarator of redemption brought by him, to which the inhibitor must be made a party.

ply  
dictory

6. An inhibition is a diligence simply prohibitory, so that the debt, on which it proceeds, continues personal after the diligence; and consequently, the inhibitor, in a question with anterior creditors whose debts are not struck at by the inhibition, is only preferable from the period at which his debt is made real by adjudication: and where debts are contracted on heritable security, though posterior to the inhibition, the inhibitor's debt, being personal, cannot be ranked with them; he only draws back from the creditors ranked the sums contained in his diligence. The heir of the person inhibited is not restrained from alienation by the diligence used against his ancestor; for the prohibition is personal, affecting only the debtor against whom the diligence is used.

7. Inhibitions do not, of themselves, make void the posterior debts or deeds of the person inhibited; they only afford a title to the user of the diligence to set them aside, if he finds them hurtful to him: and even where a debt is actually reduced *ex capite inhibitionis*, such reduction, being founded solely in the inhibitor's interest, is profitable to him alone, and cannot alter the natural preference of the other creditors.

ng of  
tions.

8. Inhibitions may be reduced upon legal nullities, arising either from the ground of debt or the form of diligence. When payment is made by the debtor to the inhibitor, the inhibition is said to be *purged*. Any creditor, whose debt is struck at by the inhibition, may, upon making payment to the inhibitor, compel him to assign the debt and diligence in his favour, that he may make good his payment the more effectually against the common debtor.

iii.

#### SECT. XII. *Of comprisings, adjudications, and judicial sales.*

ing.

HERITABLE rights may be carried from the debtor to the creditor, either by the diligence of apprising (now adjudication), or by a judicial sale carried on before the court of session. Apprising, or comprising,

was the sentence of a sheriff, or of a messenger who was specially constituted sheriff for that purpose, by which the heritable rights belonging to the debtor were sold for payment of the debt due to the appriser; so that apprisings were, by their original constitution, proper sales of the debtor's lands to any purchaser who offered. If no purchaser could be found, the sheriff was to apprise or tax the value of the lands by an inquest (whence came the name of *apprising*), and to make over to the creditor lands to the value of the debt. A full history of apprisings will be found in the beginning of Mr Erskine's large *Institute* under this title; it being considered as unnecessary to enter into a deduction now no longer necessary, as by the act 1672 adjudications were substituted in their place.

Law of  
Scotland.

2. That creditors may have access to affect the estate of their deceased debtor, though the heir should stand off from entering, it is made lawful (by 1540, c. 106.) for any creditor to charge the heir of his debtor to enter to his ancestor (year and day being past after the ancestor's death), within 40 days after the charge; and if the heir fails, the creditor may proceed to apprise his debtor's lands, as if the heir had been entered. Custom has so explained this statute, that the creditor may charge the heir, immediately after the death of his ancestor, provided that the summons which is to be founded on the charge be not raised till after the expiry both of the year and of the 40 days next ensuing the year, within which the heir is charged to enter. But this statute relates only to such charges on which apprising is to be led against the ancestor's lands; for, in those which are to be barely the foundation of a common summons or process against the heir, action will be sustained if the year be elapsed from the ancestor's death before the execution of the summons, though the 40 days should not be also expired. Though the statute authorises such charges against majors only, practice has also extended it against minors, and the rule is extended to the case where the heir is the debtor. One must, in this matter, distinguish between a general and a special charge. A general charge serves only to fix the representation of the heir who is charged, so as to make the debt his which was formerly his ancestor's: but a special charge makes up for the want of a sevice (N<sup>o</sup> clxxx. 25.) and states the heir, *fictione juris* in the right of the subjects to which he is charged to enter. Where, therefore, the heir is the debtor, a general charge for fixing the representation against him is unnecessary, since the only concern of the creditor is, that his debtor make up titles to the ancestor's estate, which is done by a special charge; but where the deceased was the debtor, the creditor must first charge his heir to enter in general, that it may be known whether he is to represent the debtor: if he does not enter within forty days, the debt may be fixed against him by a decree of constitution; after which, the heritable rights belonging to the ancestor will fall to be attached; in doing which, the diligence to be used is different, according to the state of the titles in the ancestor's person: for if the ancestor stood vested by investment, the heir must be charged to enter heir in special; but if the ancestor had but a personal right to the subjects (*i. e.* not perfected by seisin), which would have been carried to the heir by a general sevice, then what is called a *general special charge* must be given to the heir. These charges, either

Law of  
Scotland.

ther special or general special, as the circumstances of the case may require, are by the statute 1540 made equivalent to the heir's actual entry; and therefore an adjudication led after the *inducia* of the charges are elapsed, effectually carries to the creditor the subjects to which the heir was charged to enter.

Adjudica-  
tions.

3. Apprisings in course of time underwent many changes in their form and effect, till at length, by act 1672, c. 19. adjudications were substituted in their place, and are carried on by way of action before the court of session. By that statute, such part of the debtor's lands is to be adjudged as is equivalent to the principal sum and interest of the debt, with the composition due to the superior and expences of incumberment, and a fifth part more in respect the creditor is obliged to take land for his money. The debtor must deliver to the creditor a valid right of the lands to be adjudged, or transumps thereof, renounce the possession in his favour, and ratify the decree of adjudication: and law considers the rent of the lands as precisely commensurated to the interest of the debt; so that the adjudger lies under no obligation to account for the surplus rents. In this, which is called a *special adjudication*, the legal, or time within which the debtor may redeem, is declared to be five years; and the creditor attaining possession upon it can use no farther execution against the debtor, unless the lands be evicted from him.

4. Where the debtor does not produce a sufficient right to the lands, or is not willing to renounce the possession, and ratify the decree (which is the case that has most frequently happened), the statute makes it lawful for the creditor to adjudge all right belonging to the debtor in the same manner, and under the same reversion of ten years, as he could, by the former laws, have apprifed it. In this last kind, which is called a *general adjudication*, the creditor must limit his claim to the principal sum, interest, and penalty, without demanding a fifth part more. But no general adjudication can be insisted on, without libelling in the summons the other alternative of a special adjudication; for special adjudications are introduced by the statute in the place of apprisings; and it is only where the debtor refuses to comply with the terms thereof, that the creditor can lead a general adjudication.

5. Abbreviates are ordained to be made of all adjudications, which must be recorded within 60 days after the date of the decree. In every other respect, general adjudications have the same effects that apprisings had: adjudgers in possession are accountable for the surplus rents; a citation in adjudications renders the subject litigious; superiors are obliged to enter adjudgers; the legal of adjudications does not expire during the debtor's minority, &c. Only it may be observed, that though apprisings could not proceed before the term of payment, yet where the debtor is *vergens ad inopiam*, the court *ex nobili officio* admit adjudication for the debt before it be payable. But this sort being founded solely in equity, subsists merely as a security, and cannot carry the property to the creditor by the lapse of any length of time.

6. There are two kinds of adjudication, which took place at the same time with apprisings, and still obtain; *viz.* adjudications on a decree *cognitionis causa*, otherwise called *contra hereditatem jacentem*; and adjudications *in implement*. Where the debtor's apparent

Two kinds  
of adjudica-  
tions.

heir, who is charged to enter, formally renounces the succession, the creditor may obtain a decree *cognitionis causa*; in which, though the heir renouncing is cited for the sake of form, no sentence condemnatory can be pronounced against him, in respect of his renunciation; the only effect of it is to subject the *hereditas jacens* to the creditor's diligence.

7. Adjudications *contra hereditatem jacentem*, carry not only the lands themselves that belonged to the deceased, but the rents thereof fallen due since his death; for these, as an accessory to the estate belonging to the deceased, would have descended to the heir if he had entered, which rule is applied to all adjudications led on a special charge. This sort of adjudication is declared redeemable within seven years, by any co-adjudging creditor, either of the deceased debtor or of the heir renouncing. The heir himself, who renounces, cannot be restored against his renunciation, nor consequently redeem, if he be not a minor. But even a major may redeem indirectly, by granting a simulate bond to a confident person; the adjudication upon which, when conveyed to himself, is a good title to redeem all other adjudications against the lands belonging to his ancestor.

8. Adjudications *in implement* are deduced against those who have granted deeds without procuratory of resignation or precept of seisin, and refuse to divest themselves; to the end that the subject conveyed may be effectually vested in the grantee. These adjudications may be also directed against the heir of the granter, upon a charge to enter. Here there is no place for a legal reversion; for, as the adjudication is led for completing the right of a special subject, it must carry that subject as irredeemably as if the right had been voluntarily completed.

9. All adjudications led within year and day of that one which has been made first effectual by seisin (where seisin is necessary), or exact diligence for obtaining seisin, are preferable *pari passu*. The year and day runs from the date of the adjudication, and not of the seisin or diligence, for obtaining it. After the days of that period, they are preferable according to their dates. All the co-adjudgers within the year are preferable *pari passu*, as if one adjudication had been led for all their debts. This makes the seisin or diligence on the first adjudication a common right to the rest, who must therefore refund to the owner of that diligence his whole expence laid out in carrying on and completing it. And though that first adjudication should be redeemed, the diligence upon it still subsists, as to the rest. This *pari passu* preference, however, does not destroy the legal preference of adjudications led on *debita fundi* (see N. clxix. 15.); nor does it take place in adjudications in implement.

A new sort of adjudication has been lately introduced into the law of Scotland by the act of the 23d Geo. III. for rendering the payment of the creditors of insolvent debtors more equal and expeditious. Among the many other provisos in that statute for expediting the payment of creditors, and lessening the expence of diligence against the debtor's estate, it is enacted, That upon an order from the court of session, or lord ordinary, the bankrupt shall be bound to execute a disposition or dispositions, making over to the trustee or trustees chosen by the creditors the whole estate real and personal, wherever situated; and in case

of the bankrupt's refusal, or of the order not being complied with from any other reason, the court or the lord ordinary shall, upon the application of the trustee, issue an act or decree, adjudging the property of the whole sequestrated estate to be in the trustee for behoof of the creditors; which shall have the same effect as if the bankrupt had executed the conveyance: and by a subsequent clause in the statute, it is enacted, that this disposition of the heritable estate, together with the order of the court or lord ordinary on which it proceeds, or, failing thereof, the decree of adjudication of the court or the lord ordinary, shall within 60 days of the date thereof be registered in the register of abbreviations of adjudications; and shall have the effect to intitle the trustee for behoof of the whole creditors to rank in the same manner upon the heritable estate as if it had been a proper decree of adjudication, obtained at the date of the interlocutor awarding the sequestration; accumulating the whole debts, principal and interest, as at that period, and adjudging for security or payment thereof, so as to rank *pari passu* with any prior effectual adjudication, and within year and day of the same. By this act also, in order to lessen the number of adjudications, and consequently the expence upon a bankrupt estate, it is declared, that intimation shall be made of the first adjudication which is called, so as all creditors who are in readiness may, within such a reasonable time as may be allowed, not exceeding twenty federunt days, produce their grounds of debt, and be conjoined in the decree to follow on said first adjudication. At the same time it may be proper to mention, that this act is only temporary; and after eight years experience, will probably suffer very considerable alterations, when it shall become necessary to digest another bankrupt law for Scotland.

estra-

10. Before treating of judicial sales of bankrupts estates, the nature of *sequestration* may be shortly explained, which is a diligence that generally ushers in actions of sale. Sequestration of lands is a judicial act of the court of session, whereby the management of an estate is put into the hands of a factor or steward named by the court, who gives security, and is to be accountable for the rents to all having interest. This diligence is competent, either where the right of the lands is doubtful, if it be applied for before either of the competitors has attained possession, or where the estate is heavily charged with debts: but, as it is an unfavourable diligence, it is not admitted, unless that measure shall appear necessary for the security of creditors. Subjects not brought before the court by the diligence of creditors, cannot fall under sequestration; for it is the competition of creditors which alone founds the jurisdiction of the court to take the disputed subject into their possession.

11. The court of session who decrees the sequestration has the nomination of the factor, in which they are directed by the recommendation of the creditors. A factor appointed by the session, though the proprietor had not been seised in the lands, has a power to remove tenants. Judicial factors must, within six months after extracting their factory, make up a rental of the estate, and a list of the arrears due by tenants, to be put into the hands of the clerk of the process, as a charge against themselves, and a note of such alterations in the rental as may afterwards happen; and must

also deliver to the clerk annually a scheme of their accounts, charge and discharge, under heavy penalties. They are, by the nature of their office, bound to the same degree of diligence that a prudent man adhibits in his own affairs; they are accountable for the interest of the rents, which they either have, or by diligence might have recovered, from a year after their falling due. As it is much in the power of those factors to take advantage of the necessities of creditors, by purchasing their debts at an undervalue, all such purchases made either by the factor himself, or to his behoof, are declared equivalent to an acquittance or extinction of the debt. No factor can warrantably pay to any creditor, without an order of the court of session; for he is, by the tenor of his commission, directed to pay the rents to those who shall be found to have the best right to them. Judicial factors are intitled to a salary, which is generally stated at five *per cent.* of their intromissions; but it is seldom ascertained till their office expires, or till their accounting; that the court may modify a greater or smaller salary, or none, in proportion to the factor's integrity and diligence. Many cases occur, where the court of session, without sequestration, name a factor to preserve the rents from perishing; *e. g.* where an heir is deliberating whether to enter, where a minor is without tutors, where a succession opens to a person residing abroad; in all which cases the factor is subjected to the rules laid down in act of federunt, Feb. 13. 1730.

As to sequestrations under the bankrupt act before recited, the reader must necessarily be referred to the act itself; for being only temporary, as before mentioned, it seems quite inconsistent with the plan of this work to enter into a minute detail of the different regulations thereby laid down in cases of sequestration under it.

12. The word *bankrupt* is sometimes applied to persons whose funds are not sufficient for their debts; and sometimes, not to the debtor, but to his estate. The court of session are empowered, at the suit of any real creditor, to try the value of a bankrupt's estate, and sell it for the payment of his debts.

13. No process of sale, at the suit of a creditor, can proceed without a proof of the debtor's bankruptcy, or at least that his lands are so charged with debts that no prudent persons will buy from him; and therefore the summons of sale must comprehend the debtor's whole estate. The debtor, or his apparent heir, and all the real creditors in possession, must be made parties to the suit; but it is sufficient if the other creditors be called by an edictal citation. The summons of sale contains a conclusion of ranking or preference of the bankrupt's creditors. In this ranking, first and second terms are assigned to the whole creditors for exhibiting in court (or producing) their rights and diligences; and the decree of certification proceeding thereupon, against the writings not produced, has the same effect in favour of the creditors who have produced their rights, as if that decree had proceeded upon an action of reduction-improbation. See N<sup>o</sup> cxxxiii. 3. By the late bankrupt act, the sale may precede the ranking of the creditors, unless the court, upon application of the creditors, or any of them, shall find sufficient cause to delay the sale. The irredeemable property of the lands is adjudged by the court to the highest offerer

ferer at the sale. The creditors receiving payment must grant to the purchaser absolute warrandice, to the extent of the sum received by them; and the lands purchased are declared discharged of all debts or deeds of the bankrupt, or his ancestors, either on payment of the price by the purchaser to the creditors according to their preference, or on consignment of it. By the act 1695, purchasers were bound to consign the price in the hands of the magistrates of Edinburgh; but by § 5. of the above act, they may consign it in the royal bank or bank of Scotland. The only remedy provided to such creditors as judge themselves hurt by the sale or division of the price, even though they should be minors, is an action for recovering their share of the price against the creditors who have received it.

14. The expence of these processes is debursed by the factor out of the rents in his hands; by which the whole burden of such expence falls upon the posterior creditors.

15. Apparent heirs are intitled to bring actions of sale of the estates belonging to their ancestors, whether bankrupt or not; the expence of which ought to fall upon the pursuer, if there is any excrescence of the price, after payment of the creditors; but if there be no excrescence, the creditors, who alone are gainers by the sale, ought to bear the charge of it.

16. As processes of ranking and sale are designed for the common interest of all the creditors, no diligence carried on or completed during their pendency ought to give any preference in the competition; *pendente l. i., nihil innovandum.*

17. It is a rule in all real diligences, that where a creditor is preferable on several different subjects, he cannot use his preference arbitrarily, by favouring one creditor more than another; but must allocate his universal or catholic debt proportionally against all the subjects or parties whom it affects. If it is material to such creditor to draw his whole payment out of any one fund, he may apply his debt so as may best secure himself: but that inequality will be rectified as to the posterior creditors, who had likewise, by their rights and diligences, affected the subjects out of which he drew his payment, by obliging him to assign in their favour his right upon the separate subjects which he did not use in the ranking; by which they may recur against these separate subjects for the shares which the debt preferred might have drawn out of them. As the obligation to assign is founded merely in equity, the catholic creditor cannot be compelled to it, if his assigning shall weaken the preference of any separate debt vested in himself, affecting the special subject sought to be assigned. But if a creditor upon a special subject shall acquire from another a catholic right, or a catholic creditor shall purchase a debt affecting a special subject, with a view of creating to the special debt a higher degree of preference than was naturally due to it, by an arbitrary application of the catholic debt, equity cannot protect him from assigning in favour of the creditor excluded by such application, especially if, prior to the purchase, the subject has become litigious by the process of ranking.

## II. MOVEABLE RIGHTS.

THE law of heritable rights being explained, *Move-*

able Rights fall next to be considered; the doctrine of which depends chiefly on the nature of Obligations.

### SECT. XIII. *Of obligations and contracts in general.* clxxiii.

AN obligation is a legal tie, by which one is bound to pay or perform something to another. Every obligation on the person obliged implies an opposite right in the creditor, so that what is a burden in regard to the one is right with respect to the other; and all rights founded on obligation are called *personal*. There is this essential difference between a real and a personal right, that a *jus in re*, whether of property, or of an inferior kind, as servitude, intitles the person vested with it to possess the subject as his own; or if he is not in possession, to demand it from the possessors: whereas the creditor in a personal right has only *jus ad rem*, or a right to compel the debtor to fulfil his obligation; without any right in the subject itself, which the debtor is bound to transfer to him. One cannot oblige himself, but by a present act of the will. A bare resolution, therefore, or purpose, to be obliged, is alterable at pleasure.

2. Obligations are either, (1.) Merely natural, where one person is bound to another by the law of nature, but cannot be compelled by any civil action to the performance. Thus, though deeds granted by a minor having curators, without their consent, are null, yet the minor is naturally obliged to perform such deeds; and parents are naturally obliged to provide their children in reasonable patrimonies. Natural obligations intitle the creditor to retain what he has got in virtue thereof, without being subjected to restore it. (2.) Obligations are merely civil, which may be sued upon by an action, but are elided by an exception in equity; this is the case of obligations granted through force or fear, &c. (3.) Proper or full obligations, are those which are supported both by equity and the civil sanction.

3. Obligations may be also divided into, (1.) Pure, to which neither day nor condition is adjected. These may be exacted immediately. (2.) Obligations (*ex die*), which have a day adjected to their performance. In these, *dies statim credit, sed non venit*; a proper debt arises from the date of the obligation, because it is certain that the day will exist; but the execution is suspended till the lapse of that day. (3.) Conditional obligations; in which there is no proper debt (*dies non credit*) till the condition be purified, because it is possible the condition may never exist; and which therefore are said to create only the hope of a debt; but the grantor, even of these, has no right to refuse. An obligation, to which a day is adjected that possibly may never exist, implies a condition; *dies incertus pro conditione habetur*. Thus, in the case of a provision to a child, payable when he attains to the age of fourteen, if the child dies before that age, the provision fails.

4. Obligations, when considered with regard to their cause, were divided by the Romans, into those arising from contract, quasi contract, delict, and quasi delict: but there are certain obligations, even full and proper ones, which cannot be derived from any of these sources, and to which Lord Stair gives the name of *obediential*. Such as the obligation on parents to aliment or maintain their children; which arises singly from the relation

aw of  
otland.

tion of parent and child, and may be enforced by the civil magistrate. Under parents are comprehended, the mother, grandfather, and grandmother, in their proper order. This obligation on parents extends to the providing of their issue in all the necessaries of life, and giving them suitable education. It ceases, when the children can earn a livelihood by their own industry; but the obligation on parents to maintain their indigent children, and reciprocally on children to maintain their indigent parents, is perpetual. This obligation is, on the father's death, transferred to the eldest son, the heir of the family; who, as representing the father, must alimnt his younger brothers and sisters: the brothers are only intitled to alimony, till their age of twenty-one, after which they are presumed able to do for themselves; but the obligation to maintain the sisters continues till their marriage. In persons of lower rank, the obligation to alimnt the sisters ceases after they are capable of subsisting by any service or employment.

5. All obligations, arising from the natural duty of restitution, fall under this class; thus, things given upon the view of a certain event, must be restored, if that event does not afterwards exit: thus also, things given *ob turpem causam*, where the turpitude is in the receiver and not in the giver, must be restored. And on the same principle, one upon whose ground a house is built or repaired by another, is obliged, without any covenant, to restore the expence laid out upon it, in so far as it has been profitable to him.

traSt.

6. A contract is the voluntary agreement of two or more persons, whereby something is to be given or performed upon one part, for a valuable consideration, either present or future, on the other part. Consent, which is implied in agreement, is excluded, (1.) By error in the essentials of the contract; for, in such case, the party does not properly contract, but errs or is deceived; and this may be also applied to contracts which take their rise from fraud or imposition. (2.) Consent is excluded by such a degree of restraint upon any of the contracting parties, as extorts the agreement; for where violence or threatening are used against a person, his will has really no part in the contract.

pan.

7. Loan, or *mutuum*, is that contract which obliges a person, who has borrowed any fungible subject from another, to restore to him as much of the same kind, and of equal goodness. Whatever receives its estimation in number, weight, or measure, is a fungible; as corn, wine, current coin, &c. The only proper subjects of this contract are things which cannot be used without either their extinction or alienation: hence the property of the thing lent is necessarily transferred by delivery to the borrower, who consequently must run all the hazards either of its deterioration or its perishing, according to the rule, *res perit suo domino*. Where the borrower neglects to restore at the time and place agreed on, the estimation of the thing lent must be made according to its price at that time and in that place; because it would have been worth so much to the lender, if the obligation had been duly performed. If there is no place nor time stipulated for, the value is to be stated according to the price that the commodity gave when and where it was demanded. In the loan of money, the value put on it by public authority, and not its intrinsic worth, is to be considered,

This contract is one of those called by the Romans *unilateral*, being obligatory only on one part; for the lender is subjected to no obligation: the only action therefore that it produces, is pointed against the borrower, that he may restore as much in quantity and quality as he borrowed, together with the damage the lender may have suffered through default of due performance.

Law of  
Scotland.

8. Commodate is a species of loan, gratuitous on the part of the lender, where the thing lent may be used, without either its perishing or its alienation. Hence, in this sort of loan, the property continues with the lender: the only right the borrower acquires in the subject is its use, after which he must restore the individual thing that he borrowed: consequently, if the subject perishes, it perishes to the lender, unless it has perished by the borrower's fault. What degree of fault or negligence makes either of the contracting parties liable to the other in damages, is comprehended under the following rules. Where the contract gives a mutual benefit to both parties, each contractor is bound to adhibit a middle sort of diligence, such as a man of ordinary prudence uses in his affairs. Where only one of the parties has benefit by the contract, that party must use exact diligence; and the other who has no advantage by it, is accountable only for dolo, or for gross omissions, which the law construes to be dolo. Where one employs less care on the subject of any contract which implies an exuberant trust, than he is known to employ in his own affairs, it is considered as dolo.

Commo-  
date.

9. Hence it will appear that this is a *bilateral* contract; the borrower must be exactly careful of the thing lent, and restore it at the time fixed by the contract, or after that use is made of it for which it was lent: if he puts it to any other use, or neglects to restore it at the time covenanted, and if the thing perishes thereafter, even by mere accident, he is bound to pay the value. On the other part, the lender is obliged to restore to the borrower such of the expences deburred by him on that subject as arose from any uncommon accident, but not those that naturally attend the use of it. Where a thing is lent gratuitously, without specifying any time of redelivery, it constitutes the contract of *precarium*, which is revocable at the lender's pleasure, and, being entered into from a personal regard to the borrower, ceases by his death.

10. Deposition is also a *bilateral* contract, by which one who has the custody of a thing committed to him (the depositary) is obliged to restore it to the depositor. If a reward is bargained for by the depositary for his care, it resolves into the contract of location. As this contract is gratuitous, the depositary is only answerable for the consequences of gross neglect; but after the deposit is redemanded, he is accountable even for casual misfortunes. He is intitled to a full indemnification for the losses he has sustained by the contract, and to the recovery of all sums expended by him on the subject.

Depositi-  
tion.

11. An obligation arises without formal paction, barely by a traveller's entering into an inn, ship, or stable, and there depositing his goods, or putting up his horses; whereby the innkeeper, shipmaster, or stable, is accountable, not only for his own facts and those of his servants (which is an obligation implied in the very exercise of these employments), but of the other guests or passengers; and, indeed, in every case, unless

Nautic, car-  
pones, stabu-  
laris.

where.

Law of Scotland.

Law of Scotland.

where the goods have been lost *damno fatali*, or carried off by pirates or house-breakers. Not only the matters of ships, but their employers, are liable each of them for the share that he has in the ship; but by the present custom of trading nations, the goods brought into a ship must have been delivered to the master or mate, or entered into the ship-books. Carriers fall within the intendment of this law; and practice has extended it to victuaries within borough. The extent of the damage sustained by the party may be proved by his own oath *in litem*.

Sequestration.

12. Sequestration, whether voluntarily confessed to by the parties, or authorized by the judge, is a kind of deposit; but as the office of sequestrator, to whose care the subject in dispute is committed, is not considered as gratuitous, he cannot throw it up at pleasure, as a common depositary may do; and he is liable in the middle degree of diligence. Confignation of money is also a deposit. It may be made, either where the debt is called in question by the debtor, as in suspensions; or where the creditor refuses to receive his money, as in wadsets, &c. The risk of the consigned money lies on the consigner, where he ought to have made payment, and not confignation; or has consigned only a part; or has chosen for consignatory, a person neither named by the parties nor of good credit. The charger, or other creditor, runs the risk, if he has charged for sums not due, or has without good reason refused payment, by which refusal the confignation became necessary. It is the office of a consignatory, to keep the money in safe custody till it be called for: if therefore he puts it out at interest, he must run the hazard of the debtor's insolvency; but, for the same reason, though he should draw interest for it, he is liable in none to the consigner.

Confignation.

Pledge.

13. Pledge, when opposed to wadset, is a contract, by which a debtor puts into the hands of his creditor a special moveable subject in security of the debt, to be redelivered on payment. Where a security is established by law to the creditor, upon a subject which continues in the debtor's possession, it has the special name of an hypothec. Tradesmen and ship carpenters have an hypothec on the house or ship repaired, for the materials and other charges of reparation; but not for the expence of building a new ship. This, however, must not now be understood to apply universally; for the court of session, in different cases which lately occurred before them, and founding upon the law and practice of England in similar cases, have found, that no hypothec exists for the expence of repairs done in a home port. Owners of ships have an hypothec on the cargo for the freight; heritors on the fruits of the ground; and landlords on the *invecna et illata*, for their rents. Writers also, and agents, have a right of hypothec, or more properly of retention, in their constituent's writings, for their claim of pains and debursemments. A creditor cannot, for his own payment, sell the subject impignorated, without applying to the judge-ordinary for a warrant to put it up to public sale or roup; and to this application the debtor ought to be made a party.

Hypothec.

cxxxiv.

Verbal agreement.

SECT. XIV. Of Obligations by word or writ.

THE appellation of *verbal* may be applied to all

obligations to the constitution of which writing is not essential, which includes both real and consensual contracts; but as these are explained under separate titles, obligations *by word*, in the sense of this rubric, must be restricted, either to promises, or to such verbal agreements as have no special name to distinguish them. Agreement implies, the intervention of two different parties, who come under mutual obligations to one another. Where nothing is to be given or performed but on one part, it is properly called a *promise*; which, as it is gratuitous, does not require the acceptance of him to whom the promise is made. An offer, which must be distinguished from a promise, implies something to be done by the other party; and consequently is not binding on the offerer, till it be accepted, with its limitations or conditions, by him to whom the offer is made; after which, it becomes a proper agreement.

Writing

2. Writing must necessarily intervene in all obligations and bargains concerning heritable subjects, tho' they should be only temporary; as tacks, which, when they are verbal, last but for one year. In these, no verbal agreement is binding, though it should be referred to the oath of the party; for, till writing is adhibited, law gives both parties a right to refile, as from an unfinished bargain; which is called *locus penitentiae*. If, upon a verbal bargain of lands, part of the price shall be paid by him who was to purchase, the *interventus rei*, the actual payment of money, creates a valid obligation, and gives a beginning to the contract of sale: and, in general, where-ever matters are no longer entire, the right to refile seems to be excluded. An agreement, whereby a real right is passed from, or restricted, called *pactum liberatorium*, may be perfected verbally; for freedom is favourable, and the purpose of such agreement is rather to dissolve than to create an obligation. Writing is also essential to bargains made under condition that they shall be reduced into writing; for in such cases, it is *pars contractus*, that, till writing be adhibited, both parties shall have liberty to withdraw. In the same manner, verbal or nuncupative testaments are rejected by our law; but verbal legacies are sustained, where they do not exceed L. 100 Scots.

solemnity of writer obligation

3. Anciently, when writing was little used, deeds were executed by the party, appending his seal to them in presence of witnesses. For preventing frauds that might happen by appending seals to false deeds, the subscription also of the granter was afterwards required, and, if he could not write, that of a notary. As it might be of dangerous consequences to give full force to the subscription of the parties by initials, which is more easily counterfeited; our practice, in order to sustain such subscription, seems to require a proof, not only that the granter used to subscribe in that way, but that *de facto* he had subscribed the deed in question; at least, such proof is required, if the instrumentary witnesses be still alive.

4. As a further check, it was afterwards provided, that all writings carrying any heritable right, and other deeds of importance, be subscribed by the principal parties, if they can subscribe; otherwise, by two notaries, before four witnesses specially designed. The subsequent practice extended this requisite of the designation of the witnesses to the case where the parties themselves subscribed. Custom has construed obligations for

sums exceeding L. 100 Scots, to be obligations of importance. In a divisible obligation, *ex. gr.* for a sum of money, though exceeding L. 100, the subscription of one notary is sufficient, if the creditor restricts his claim to L. 100: But in an obligation indivisible, *e. g.* for the performance of a fact, if it be not subscribed in terms of the statute, it is void. When notaries thus attest a deed, the attestation or docket must specially express that the granter gave them a mandate to sign; nor is it sufficient that this be mentioned in the body of the writing.

5. In every deed, the name of him who writes it, with his dwelling-place, or other mark of distinction, must be inserted. The witnesses must both subscribe as witnesses, and their names and designations be inserted in the body of the deed: And all subscribing witnesses must know the granter, and either see him subscribe, or hear him acknowledge his subscription; otherwise they are declared punishable as accessory to forgery. Deeds, decrees, and other securities, consisting of more than one sheet, may be written by way of book, in place of the former custom of pasting together the several sheets, and signing the joinings on the margin; provided each page be signed by the granter, and marked by its number, and the testing clause express the number of pages.

6. Instruments of seisin are valid, if subscribed by one notary, before a reasonable number of witnesses; which is extended by practice to instruments of resignation. Two witnesses are deemed a reasonable number to every deed that can be executed by one notary. It is not necessary that the witnesses to a notarial instrument or execution see the notary or messenger sign; for they are called as witnesses to the transaction which is attested, and not to the subscription of the person attesting.

7. A new requisite has been added to certain deeds since the union, for the benefit of the revenue: They must be executed on stamped paper, or parchment, paying a certain duty to the crown. These duties must all be paid before wrote upon, under a penalty; but they are so numerous and complex, that it would be tedious, even if it fell under our plan, to enter into an enumeration of them. They will be found at length in Swinton's Abridgement, *voce Stamps*, to which the reader is referred. Certain judicial deeds, such as bail-bonds, bonds of cautionry, in suspensions, &c. are excepted, and do not require stamps, as will be seen from the several acts referred to by the compiler of the above abridgement of the statutes.

8. The granter's name and designation are essential, not properly as solemnities, but because no writing can have effect without them. Bonds were, by our ancient practice, frequently executed without filling up the creditor's name; and they passed from hand to hand, like notes payable to the bearer: But as there was no method for the creditor of a person possessed of these to secure them for his payment, all writings taken blank in the creditor's name are declared null, as covers to fraud; with the exception of indorsations of bills of exchange.

9. Certain privileged writings do not require the ordinary solemnities. 1. Holograph deeds (written by the granter himself) are effectual without witnesses. The date of no holograph writing, except a bill of ex-

change (see next parag.), can be proved by the granter's own assertion, in prejudice either of his heir or his creditors, but must be supported by other adminicles.

2. Testaments, if executed where men of skill and business cannot be had, are valid though they should not be quite formal: and let the subject of a testament be ever so valuable, one notary signing for the testator, before two witnesses, is in practice sufficient. Clergymen were frequently notaries before the reformation; and, though they were afterwards prohibited to act as notaries, the case of testaments is excepted; so that these are supported by the attestation of one minister, with two witnesses. 3. Discharges to tenants are sustained without witnesses, from their presumed rusticity, or ignorance in business. 4. Misive letters *in re mercatoria*, commissions, and tuted accounts in the course of trade, and bills of exchange, though they are not holograph, are, from the favour of commerce, sustained without the ordinary solemnities.

10. A bill of exchange is an obligation in the form of a mandate, whereby the drawer or mandant desires him to whom it is directed, to pay a certain sum, at the day and place therein mentioned, to a third party. Bills of exchange are drawn by a person in one country to his correspondent in another; and they have that name, because it is the exchange, or the value of money in one place compared with its value in another, that generally determines the precise extent of the sum contained in the draught. The creditor in the bill is sometimes called the possessor, or *porteur*. As parties to bills are of different countries, questions concerning them ought to be determined by the received custom of trading nations, unless where special statute interposes. For this reason, bills of exchange, though their form admits not of witnesses, yet prove their own dates, in questions either with the heir or creditors of the debtor; but this doctrine is not extended to inland bills payable to the drawer himself.

11. A bill is valid, without the designation either of the drawer or of the person to whom it is made payable: It is enough, that the drawer's subscription appears to be truly his; and one's being possessor of a bill marks him out to be the creditor, if he bears the name given in the bill to the creditor: Nay, though the person drawn on should not be designed, his acceptance presumes that it was he whom the drawer had in his eye. Bills drawn blank, in the creditor's name, fall under the statutory nullity; for though indorsations of bills are excepted from it, bills themselves are not. Not only the person drawn upon must sign his acceptance, but the drawer must sign his draught, before any obligation can be formed against the acceptor: Yet it is sufficient in practice, that the drawer signs before the bill be produced in judgment; though it should be after the death both of the creditor and acceptor. A creditor in a bill may transmit it to another by indorsation, though the bill should not bear *to his order*; by the same rule that other rights are transferrable by assignation, though they do not bear *to assignees*.

12. The drawer, by signing his draught, becomes liable for the value to the creditor in the bill, in case the person drawn upon either does not accept, or after acceptance does not pay; for he is presumed to have received value from the creditor at giving him the draught, though it should not bear *for value received*: But, if

Law of  
Scotland.Law of  
Scotland.

the drawer was debtor to the creditor in the bill before the draught, the bill is presumed to be given towards payment of the debt, unless it expressly bears *for value*. The person drawn upon, if he refuse to accept, while he has the drawer's money in his hands, is liable to him in damages. As a bill presumes value from the creditor, indorsation presumes value from the indorsee; who therefore, if he cannot obtain payment from the acceptor, has recourse against the indorser, unless the bill be indorsed in these words, *without recourse*.

13. Payment of a bill, by the acceptor, acquits both the drawer and him at the hands of the creditor: but it intitles the acceptor, if he was not the drawer's debtor, to an action of recourse against him; and, if he was, to a ground of compensation. Where the bill does not bear value in the hands of the person drawn upon, it is presumed that he is not the drawer's debtor, and consequently he has recourse against the drawer, *ex mandato*.

14. Bills, when indorsed, are considered as so many bags of money delivered to the onerous indorsee; which therefore carry right to the contents, free of all burdens that do not appear on the bills themselves. Hence, a receipt or discharge, by the original creditor, if granted on a separate paper, does not exempt the acceptor from second payment to the indorsee; hence, also, no ground of compensation competent to the acceptor against the original creditor can be pleaded against the indorsee: but, if the debtor shall prove, by the oath of the indorsee, either that the bill is indorsed to him for the indorser's own behoof, or that he paid not the full value for the indorsation, the indorsee is justly considered as but a name; and therefore all exceptions, receivable against the original creditor, will be nullified against him. A protested bill, after registration, cannot be transmitted by indorsation, but by assignation.

Negotia-  
tion

15. Bills must be negotiated by the possessor, against the person drawn upon, within a precise time, in order to preserve recourse against the drawer. In bills payable so many days after sight, the creditor has a discretionary power of fixing the payment somewhat sooner or later, as his occasions shall require. Bills payable on a day certain, need not be presented for acceptance till the day of payment, because that day can neither be prolonged nor shortened by the time of acceptance. For the same reason, the acceptance of bills, payable on a precise day, need not be dated: but, where a bill is drawn payable so many days after sight, it must; because there the term of payment depends on the date of acceptance.

Days of  
grace.

16. Though bills are, in strict law, due the very day on which they are made payable, and may therefore be protested on the day thereafter; yet there are three days immediately following the day of payment, called *days of grace*, within any of which the creditor may protest the bill: but if he delay protesting till the day after the last day of grace, he loses his recourse. Where a bill is protested, either for not acceptance or not payment, the dishonour must be notified to the drawer or indorser, within three posts at farthest. This strictness of negotiation is confined to such bills as may be protested by the possessor upon the third day of grace: where, therefore, bills are indorsed after the days of

N<sup>o</sup> 178.

grace are expired, the indorsee is left more at liberty, and does not lose his recourse, tho' he should not take a formal protest for not payment, if, within a reasonable time, he shall give the indorser notice of the acceptor's refusing to pay. Not only does the possessor, who neglects strict negotiation, lose his recourse against the drawer, where the person drawn upon becomes afterwards bankrupt; but tho' he should continue solvent: for he may in that case recover payment from the debtor, and so is not to be indulged in an unnecessary process against the drawer, which he has tacitly renounced by his negligence. Recourse is preserved against the drawer, though the bill should not be duly negotiated, if the person drawn upon was not his debtor; for there the drawer can qualify no prejudice by the neglect of diligence, and he ought not to have drawn on one who owed him nothing.

17. The privileges superadded to bills by statute are, that though, by their form, they can have no clause of registration, yet, if duly protested, they are regillable within six months after their date in case of not acceptance, or in six months after the term of payment in the case of not payment; which registration is made the foundation of summary diligence, either against the drawer or indorser in the case of not acceptance, or against the acceptor in the case of not payment. This is extended to inland bills, *i. e.* bills both drawn and made payable in Scotland. After acceptance, summary diligence lies against no other than the acceptor; the drawer and indorser must be pursued by an ordinary action. It is only the principal sum in the bill, and interest that can be charged for summarily: the exchange, when it is not included in the draught, the re-exchange incurred by suffering the bill to be protested and returned, and the expence of diligence, must all be recovered by an ordinary action; because these are not liquid debts, and so must be previously constituted.

Privileges  
of bills by  
statute.

Inland bills

18. Bills, when drawn payable at any considerable distance of time after date, are denied the privileges of bills; for bills are intended for currency, and not to lie as a security in the creditor's hands. Bills are not valid which appear *ex facie* to be donations. No extrinsic stipulation ought to be contained in a bill which deviates from the proper nature of bills: hence, a bill to which a penalty is adjoined, or with a clause of interest from the date, is null. Inland precepts drawn, not for money the medium of trade, but for fungibles, are null, as wanting writer's name and witnesses. It is not an agreed point whether promissory notes, without writer and witnesses, unless holograph, are probative.

Certain  
bills not  
privilege

19. So stood the law of Scotland, in regard to bills and promissory notes, previous to the statute 12 Geo. III. By that statute, however, the law of Scotland has undergone very material alterations. They are declared to have the same privileges, and to prescribe in six years after the term of payment. Bank notes and post bills are excepted from this prescription: nor does it run during the years of the creditor's minority. Inland bills and promissory notes must be protested within the days of grace, to secure recourse; and the dishonour notified within 14 days after the protest. Summary diligence may pass not only against the acceptor, but likewise against the drawer, and all the indorsees jointly and severally; and at the instance of any indorsee,

Late alterations as  
bills and  
promissory  
notes.

indorsee, though the bill was not protested in his name, upon his producing a receipt or letter from the protesting indorsee. This act was in force only for seven years after 15th May 1772, and to the end of the then next session of parliament. But as it was found by experience, that it had been of great advantage to Scotland, it was made perpetual by the late act 23 Geo. III. so that it has now become a permanent part of the law of Scotland.

20. As for the solemnities essential to deeds signed in a foreign country, when they come to receive execution in Scotland, it is a general rule, that no laws can be of authority beyond the dominions of the law-giver. Hence, in strictness, no deed, though perfected according to the law of the place where it is signed, can have effect in another country where different solemnities are required to a deed of that sort. But this rigour is so softened *ex comitate*, by the common consent of nations, that all personal obligations granted according to the law of that country where they are signed, are effectual every where; which obtains in obligations to convey heritage. Conveyances themselves, however, of heritable subjects, must be perfected according to the law of the country where the heritage lies, and from which it cannot be removed.

21. A writing, while the granter keeps it under his own power or his doer's, has no force; it becomes obligatory, only after it is delivered to the grantee himself, or found in the hands of a third person. As to which last, the following rules are observed. A deed found in the hands of one who is doer both for the granter and grantee, is presumed to have been put in his hands as doer for the grantee. The presumption is also for delivery, if the deed appears in the hands of one who is a stranger to both. Where a deed is deposited in the hands of a third person, the terms of deposition may be proved by the oath of the depositary, unless where they are reduced into writing. A deed appearing in the custody of the grantee himself, is considered as his absolute right; in so much that the granter is not allowed to prove that it was granted in trust, otherwise than by a written declaration signed by the trustee, or by his oath.

22. The following deeds are effectual without delivery. (1.) Writings containing a clause dispensing with the delivery; these are of the nature of revocable deeds, where the death of the granter is equivalent to delivery, because after death there can be no revocation. (2.) Deeds in favour of children, even natural ones; for parents are the proper custodians or keepers of their children's writings. From a similar reason, post-nuptial settlements by the husband to the wife need no delivery. (3.) Rights which are not to take effect till the granter's death, or even where he reserves an interest to himself during his life; for it is presumed he holds the custody of these, merely to secure to himself such reserved interest. (4.) Deeds which the granter lay under an antecedent natural obligation to execute, e. g. rights granted to a cautioner for his relief. (5.) Mutual obligations, e. g. contracts; for every such deed, the moment it is executed, is a common evident to all the parties contractors. Lastly, the publication of a writing by registration, is equivalent to delivery.

SECT. XV. *Of obligations and contracts arising from consent, and of accessory obligations.*

Law of Scotland.

CONTRACTS consensual, (*i. e.* which might, by the Roman law, be perfected by sole consent, without the intervention either of things or of writing,) are *sale*, *permutation*, *location*, *society*, and *mandate*. Where the subject of any of these contracts is heritable, writing is necessary.

elxxv.  
Consensual  
contracts.

2. *Sale* is a contract, by which one becomes obliged to give something to another, in consideration of a certain price in current money to be paid for it. Things consisting merely in hope, may be the subject of this contract, as the draught of a net. Commodities, where their importation or use is absolutely prohibited, cannot be the subject of sale; and even in run goods, no action lies against the vender for not delivery, if the buyer knew the goods were run. So far indeed has this principle been carried, and so anxious have our judges been to put a stop to the practice of smuggling, that in different cases which have occurred of action being brought at the instance of a foreign merchant against persons resident in Scotland for payment of goods which had been smuggled, a distinction has been made betwixt the case of the foreign merchant being or not being a native of Scotland. Where the foreign merchant was a native of Scotland, it has been presumed that he was acquainted with the revenue law of the country, and that he was in a manner *versans in re illicita*; and therefore action has been denied for recovery of the price of such goods: but where, on the other hand, the foreign merchant was not a native of Scotland, no ways amenable to, and even presumed ignorant of, its laws, he has with justice been allowed action for the price of such goods, unless it were shown that he had in fact been *particeps criminis*, by aiding the smuggle. The same principle has regulated the decisions in the courts of England in cases of a similar nature, which have within these few years come before them.

3. Though this contract may be perfected before delivery of the subject, the property remains till then with the vender; (See N<sup>o</sup> elxii. 9.) Yet till delivery, the hazard of its deterioration falls on the purchaser, because he has all the profits arising from it after the sale. On the other hand, the subject itself perishes to the vender; (1.) If it should perish through his fault, or after his undue delay to deliver it. (2.) If a subject is sold as a fungible, and not as an individual, or *corpus*, e. g. a quantity of farm-wheat, sold without distinguishing the parcel to be delivered from the rest of the farm. (3.) The *periculum* lies on the vender till delivery, if he be obliged by a special article in the contract to deliver the subject at a certain place.

4. *Location* is that contract where an hire is stipulated for the use of things, or for the service of persons. He who lets his work or the use of his property to hire, is the locator or lessor; and the other, the conductor or lessee. In the location of things, the lessor is obliged to deliver the subject, fitted to the use it was let for; and the lessee must preserve it carefully, put it to no other use, and, after that is over, restore it. Where a workman or artificer lets his labour, and if the work is either not performed according to contract,

Location.

Law of  
Scotland.

or if it be insufficient, even from mere unskilfulness, he is liable to his employer in damages; for he ought not, as an artificer, to have undertaken a work to which he was not equal. A servant hired for a certain term, is intitled to his full wages, though from sickness or other accident he should be disabled for a part of his time; but if he die before the term, his wages are only due for the time he actually served. If a master dies, or without good reason turns off, before the term, a servant who eats in his house, the servant is intitled to his full wages, and to his maintenance till that term: and, on the other part, a servant who without ground deserts his service, forfeits his wages and maintenance, and is liable to his master in damages.

Society.

5. *Society or copartnership* is a contract, whereby the several partners agree concerning the communication of loss and gain arising from the subject of the contract. It is formed by the reciprocal choice which the partners make one of another; and so is not constituted in the case of co-heirs, or of several legatees in the same subject. A copartnership may be so constituted, that one of the partners shall, either from his sole right of property in the subject, or from his superior skill, be intitled to a certain share of the profits, without being subjected to any part of the loss; but a society, where one partner is to bear a certain proportion of loss, without being intitled to any share of the profits, called by the Romans *societas leonina*, is justly reprobated. All the partners are intitled to shares of profit and loss proportioned to their several stocks, where it is not otherwise covenanted.

6. As partners are united, from a *delectus personarum*, in a kind of brotherhood, no partner can, without a special power contained in the contract, transfer any part of his share to another. All the partners are bound *in solidum* by the obligation of any one of them, if he subscribe by the *firm* or social name of the company; unless it be a deed that falls not under the common course of administration. The company effects are the common property of the society subjected to its debts; so that no partner can claim a division thereof, even after the society is dissolved, till these are paid: and, consequently, no creditor of a partner can, by diligence, carry to himself the property of any part of the common stock, in prejudice of a company creditor: but he may, by arrestment, secure his debtor's share in the company's hands, to be made forthcoming to him at the close of the copartnership, in so far as it is not exhausted by the company debts.

7. Society being founded in the mutual confidence among the *socii*, is dissolved, not only by the renunciation, but by the death of any one of them, if it be not otherwise specially covenanted. A partner who renounces upon unfair views, or at a critical time, when his withdrawing may be fatal to the society, loses his partners from all their engagements to him, while he is bound to them for all the profits he shall make by his withdrawing, and for the loss arising thereby to the company. Not only natural, but civil death, *e. g.* arising from a sentence inflicting capital punishment, makes one incapable to perform the duties of a partner, and consequently dissolves the society. In both cases, of death and renunciation, the remaining partners may continue the copartnership, either expressly, by entering into a new contract; or tacitly, by carry-

ing on their trade as formerly. Public trading companies are now every day constituted, with rules very different from those which either obtained in the Roman law, or at this day obtain in private societies. The proprietors or partners in these, though they may transfer their shares, cannot renounce; nor does their death dissolve the company, but the share of the deceased descends to his representative.

8. A *joint trade* is not a copartnership, but a momentary contract, where two or more persons agree to contribute a sum, to be employed in a particular course of trade, the produce whereof is to be divided among the adventurers, according to their several shares, after the voyage is finished. If, in a joint trade, that partner who is intrusted with the money for purchasing the goods, should, in place of paying them in cash, buy them upon credit, the furnisher who followed his faith alone in the sale, has no recourse against the other adventurers; he can only recover from them what of the buyer's share is yet in their hands. Where any one of the adventurers in a joint trade becomes bankrupt, the others are preferable to his creditors, upon the common stock, as long as it continues undivided, for their relief of all the engagements entered into by them on account of the adventure.

9. *Mandate* is a contract, by which one employs another to manage any business for him; and by the Roman law, it must have been gratuitous. It may be constituted tacitly, by one's suffering another to act in a certain branch of his affairs, for a tract of time together, without challenge. The mandatory is at liberty not to accept of the mandate; and, as his powers are solely founded in the mandant's commission, he must, if he undertakes it, strictly adhere to the directions given him: Nor is it a good defence, that the method he followed was more rational; for in that his employer was the proper judge. Where no special rules are prescribed, the mandatory, if he acts prudently, is secure, whatever the success may be; and he can sue for the recovery of all the expences reasonably disbursed by him in the execution of his office.

10. Mandates may be general, containing a power of administering the mandant's whole affairs; but no mandate implies a power of disposing gratuitously of the constituent's property, nor even of selling his heritage for an adequate price: but a general mandatory may sell such of the moveables as must otherwise perish. No mandatory can, without special powers, transact doubtful claims belonging to his constituent, or refer them to arbiters.

11. Mandates expire, (1.) By the revocation of the employer, though only tacit, as if he should name another mandatory for the same business. (2.) By the renunciation of the mandatory; even after he has executed part of his commission, if his office be gratuitous. (3.) By the death, either of the mandant or mandatory: But if matters are not entire, the mandate continues in force, notwithstanding such revocation, renunciation, or death. Procuratories of resignation, and precepts of seisin, are made out in the form of mandates; but, because they are granted for the sole benefit of the mandatory, all of them, excepting precepts of *clare constar*, are declared (by act 1693) to continue after the death either of the granter or grantee. Deeds which contain a clause or mandate for registration, are for the

same

of same reason made registrable after the death of either  
land. (by act 1693 and 1696.)

knew that nothing was due; for *qui consulto dat quod non debuit, presumitur donare.*

Law of Scotland.

12. The favour of commerce has introduced a tacit mandate, by which masters of ships are empowered to contract in name of their executors or employers, for repairs, ship-provisions, and whatever else may be necessary for the ship or crew; so as to oblige not themselves only, but their employers. Whoever has the actual charge of the ship is deemed the master, though he should have no commission from the executors, or should be substituted by the master in the direction of the ship without their knowledge. Executors are liable, whether the master has paid his own money to a merchant for necessaries, or has borrowed money to purchase them. The furnisher or lender must prove that the ship needed repairs, provisions, &c. to such an extent; but he is under no necessity to prove the application of the money or materials to the ship's use. If there are several executors, they are liable *singuli in solidum*. In the same manner the undertaker of any branch of trade, manufacture, or other land negotiation, is bound by the contracts of the institors whom he sets over it, in so far as relates to the subject of the *prepositura*.

16. Where two or more persons become common proprietors of the same subject, either by legacy, gift, or purchase, without the view of copartnership, an obligation is thereby created among the proprietors to communicate the profit and loss arising from the subject, while it remains common: And the subject may be divided at the suit of any having interest. This division, where the question is among the common proprietors, is according to the valuation of their respective properties: But where the question is between the proprietors and those having servitudes upon the property, the superficies is only divided, without prejudice to the property. Commonities belonging to the king, or to royal boroughs, are not divisible. Lands lying runrig, and belonging to different proprietors, may be divided, with the exception of borough and incorporated acres; the execution of which is committed to the judge-ordinary, or justices of the peace.

Right of dividing common property.

13. Contracts and obligations, in themselves imperfect, receive strength by the contractor or his heirs doing any act thereafter which imports an approbation of them, and consequently supplies the want of an original legal consent. This is called *homologation*; and it takes place even in deeds intrinsically null, whether the nullity arises from the want of statutory solemnities, or from the incapacity of the grantor. It cannot be inferred, (1.) By the act of a person who was not in the knowledge of the original deed; for one cannot approve what he is ignorant of. (2.) Homologation has no place where the act or deed, which is pleaded as such, can be ascribed to any other cause; for an intention to come under an obligation is not presumed.

17. The throwing of goods overboard, for lightening a ship in a storm, creates an obligation, whereby the owners of the ship and goods saved are obliged to contribute for the relief of those whose goods were thrown overboard, that so all may bear a proportional loss of the goods ejected for the common safety. In this contribution, the ship's provisions suffer no estimation. A master who has cut his mast, or parted with his anchor, to save the ship, is intitled to this relief; but if he has lost them by the storm, the loss falls only on the ship and freight. If the ejection does not save the ship, the goods preserved from shipwreck are not liable in contribution. Ejection may be lawfully made, if the master and a third part of the mariners judge that measure necessary, though the owner of the goods should oppose it: and the goods ejected are to be valued at the price that the goods of the same sort which are saved shall be afterwards sold for.

Lex Rhodia de jactu.

14. *Quasi-contracts* are formed without explicit consent, by one of the parties doing something which by its nature either obliges him to the other party, or the other party to him. Under this class may be reckoned tutory, &c. the entry of an heir, *negotiorum gestio, indebiti solutio*, communion of goods between two or more common proprietors, and *mercium jactus levande navis causa*. *Negotiorum gestio* forms those obligations which arise from the management of a person's affairs, in his absence, by another, without a mandate. As such manager acts without authority from the proprietor, he ought to be liable in exact diligence, unless he has from friendship interposed in affairs which admitted no delay; and he is accountable for his intromissions with interest. On the other part, he is intitled to the recovery of his necessary disbursements on the subject, and to be relieved of the obligations in which he may have bound himself in consequence of the management.

18. There are certain obligations which cannot subsist by themselves, but are *accessions* to, or make a part of, other obligations. Of this sort are *fidejussio*, and the *obligation to pay interest*. *Cautionary*, or *fidejussio*, is that obligation by which one becomes engaged as security for another, that he shall either pay a sum, or perform a deed.

Accessory obligations.

15. *Indebiti solutio*, or the payment to one of what is not due to him, if made through any mistake, either of fact, or even of law, founds him who made the payment in an action against the receiver for repayment (*condictio indebiti*.) This action does not lie, (1.) If the sum paid was due *ex equitate*, or by a natural obligation: for the obligation to restore is founded solely in equity. (2.) If he who made the payment

19. A cautioner for a sum of money may be bound, either simply as cautioner for the principal debtor, or conjunctly and severally for and with the principal debtor. The first has, by our customs, the *beneficium ordinis*, or of discussion; by which the creditor is obliged to discuss the proper debtor, before he can insist for payment against the cautioner. Where one is bound as full debtor with and for the principal, or conjunctly and severally with him, the two obligants are bound equally in the same obligation, each *in solidum*; and consequently, the cautioner, though he is but an accessory, may be sued for the whole, without either discussing or even citing the principal debtor. Cautioners for performance of facts by another, or for the faithful discharge of an office (e. g. for factors, tutors, &c.), cannot by the nature of their engagement be bound conjunctly and severally with the principal obligant, because the fact to which the principal is bound cannot possibly be performed by any other. In such engagements, therefore, the failure must be previously

Cautionary.

Law of  
Scotland.

constituted against the proper debtor, before action can be brought against the cautioner for making up the loss of the party suffering.

20. The cautioner, who binds himself at the desire of the principal debtor, has an *actio mandati* or of relief against him, for recovering the principal and interest paid by himself to the creditor, and for necessary damages; which action lies *de jure*, though the creditor should not assign to him on payment. As relief against the debtor is implied in fidejussory obligations, the cautioner, where such relief is cut off, is no longer bound: hence, the defence of prescription fixes the cautioner, as well as the principal debtor.

21. But, (1.) Where the cautionry is interposed to an obligation merely natural, the relief is restricted to the sums that have really turned to the debtor's profit. (2.) A cautioner who pays without citing the debtor, loses his relief, in so far as the debtor had a relevant defence against the debt, in whole or in part. Relief is not competent to the cautioner, till he either pays the debt, or is distressed for it; except, 1st, Where the debtor is expressly bound to deliver to the cautioner his obligation cancelled, against a day certain, and has failed; or, 2dly, Where the debtor is *vergens ad inopiam*; in which case the cautioner may, by proper diligence, secure the debtor's funds for his own relief, even before payment or distress.

22. A right of relief is competent *de jure* to the cautioner who pays, against his co-cautioners, unless where the cautioner appears to have renounced it. In consequence of this implied relief, a creditor, if he shall grant a discharge to any one of the cautioners, must, in demanding the debt from the others, deduct that part as to which he has cut off their relief by that discharge. Where the principal debtor, in a bond in which a cautioner is bound, grants bond of corroboration with a new cautioner, both cautioners, as they intervene for the same debt, and at the desire of the same debtor, have a mutual relief against each other; but where the cautioner in the first bond signs as a principal obligant in the corroboration, the cautioner in the new bond, it would seem, would be intitled to a total relief against the first cautioner. At same time, the decisions of the court of session are not perfectly at one upon this branch of the doctrine of cautionry.

Judicial  
cautionry.

23. Cautionry is also *judicial*, as in a suspension. It is sufficient to loose the cautioner, that when he became bound, the suspender had good reason to suspend, *e. g.* if the charger had at that period no title, or had not then performed his part, though these grounds of suspension should be afterwards taken off. In all maritime causes, where the parties are frequently foreigners, the defender must give caution *judicio fisci et judicatum solvi*: such cautioner gets free by the death of the defender before sentence; but he continues bound, though the cause should be carried from the admiral to the court of session. This sort of caution is only to be exacted in causes strictly maritime.

24. It happens frequently, that a creditor takes two or more obligants bound to him, all as principal debtors, without fidejussion. Where they are so bound, for the performance of facts that are in themselves indivisible, they are liable each for the whole, or *linguli in solidum*. But, if the obligation be for a

sum of money, they are only liable *pro rata*; unless, (1.) Where they are in express words bound conjunctly and severally; or, (2.) In the case of bills or promissory notes. One of several obligants of this sort, who pays the whole debt, or fulfils the obligation, is intitled to a proportional relief against the rest; in such manner, that the loss must, in every case, fall equally upon all the solvent obligants.

25. Obligations for sums of money are frequently accompanied with an obligation for the annual rent or interest thereof. *Interest (usura)* is the profit due by the debtor, of a sum of money to the creditor for the use of it. The canon law considered the taking of interest as unlawful: the law of Moses allowed it to be exacted from strangers; and all the reformed nations of Europe have found it necessary, after the example of the Romans, to authorize it at certain rates fixed by statute. Soon after the reformation, our legal interest was fixed at the rate of 10 *per cent. per annum*; from which time it has been gradually reduced, till at last, by 12 *Ann. stat. 2. c. 16.* it was brought to five *per cent.* and has continued at that rate ever since.

26. Interest is due, either *by law* or *by passion*. It is due *by law*, either *from the force of statute*, under which may be included acts of federunt, or *from the nature of the transaction*. Bills of exchange, and inland bills, though they should not be protested, carry interest from their date in case of not acceptance; or from the day of their falling due, in case of acceptance and not payment. Where a bill is accepted, which bears no term of payment, or which is payable on demand, no interest is due till demand be made of the sum, the legal voucher of which is a notorial protest. Interest is due by a debtor after denunciation, for all the sums contained in the diligence, even for that part which is made up of interest. Sums paid by cautioners on distress carry interest, not only as to the principal sum in the obligation, but as to the interest paid by the cautioner. Factors named by the court of session are liable for interest, by a special act of federunt; see N<sup>o</sup> clxxii. 11.

27. It arises *ex lege*, or from the nature of the transaction, that a purchaser in a sale is liable in interest for the price of the lands bought from the term of his entry, though the price should be arrested in his hands, or though the seller should not be able to deliver to him a sufficient progress or title to the lands; for no purchaser can in equity enjoy the fruits of the lands, while at the same time he retains the interest of the price: but lawful consignment of the price made by a purchaser, upon the refusal of the person's having right to receive it, stops the currency of interest. Where one intermeddles with money belonging to another which carries interest, he ought to restore it *cum omni obventionem et causa*; and is therefore liable in the interest of it, as being truly an accessory of the subject itself. It is also from the nature of the transaction, that interest is in certain cases allowed to merchants or others in name of damages.

28. Interest is due *by express passion*, where there is a clause in a bond or obligation, by which money is made to carry interest. An obligation is not lawful, where it is agreed on, that the yearly interest of the sum lent, if it should not be paid punctually as it falls

Interest  
money.

falls

Law of Scotland.

Law of Scotland.

falls due, shall be accumulated into a principal sum bearing interest; but an obligation may be lawfully granted, not only for the sum truly lent, but for the interest to the day at which the obligation is made payable, whereby the intermediate interest is accumulated into a principal sum from the term of payment. Interest may be also due by *implied paction*: Thus, where interest upon a debt is by a letter promised for time past, such promise implies a paction for interest as long as the debt remains unpaid; thus also, the use of payment of interest presumes a paction, and when interest is expressed for one term, it is presumed to be bargained for till payment.

general principles of obligations.

29. The subject-matter of all obligations consists either of *things*, or of *facts*. Things exempted from commerce cannot be the subject of obligation. (See N<sup>o</sup> clix. 2.) One cannot be obliged to the performance of a fact naturally impossible; nor of a fact in itself immoral, for that is also in the judgment of law impossible. Since impossible obligations are null, no penalty or damage can be incurred for non-performance: but it is otherwise, if the fact be in itself possible, though not in the debtor's power; in which case the rule obtains, *locum facti impræstabilis subit damnum et interesse*.

30. An obligation, to which a condition is adjoined, either naturally or morally impossible, is in the general case null; for the parties are presumed not to have been serious. But such obligation is valid, and the condition thereof held *pro non scripta*, (1.) In testaments; (2.) In obligations, to the performance of which the granter lies under a natural tie, as in bonds of provision to a child. Where an obligation is granted under a condition, lawful but unfavourable, e. g. that the creditor shall not marry without the consent of certain friends, no more weight is given to the condition than the judge thinks reasonable. A condition, which is in some degree in the power of the creditor himself, is held as fulfilled, if he has done all he could to fulfil it. Implement or performance cannot be demanded in a mutual contract, by that party who himself declines or cannot fulfil the counterpart.

obligation.

31. *Donation*, so long as the subject is not delivered to the donee, may be justly ranked among obligations; and it is that obligation which arises from the mere good will and liberality of the granter. Donations imply no warrandice, but from the future facts of the donor. They are hardly revocable by our law for ingratitude, though it should be of the grossest kind: those betwixt man and wife are revocable by the donor, even after the death of the donee; but remuneratory grants, not being truly donations, cannot be so revoked. That special sort of donation, which is constituted verbally, is called a *promise*. The Roman law invited all donors to the *beneficium competentie*, in virtue of which they might retain such part of the donation as was necessary for their own subsistence. Our law allows this benefit to fathers, with respect to the provisions granted to their children; and to grandfathers, which is a natural consequence of children's obligation to aliment their indigent parents; but to no collateral relation, not even to brothers.

32. Donations made in contemplation of death, or

*mortis causa*, are of the nature of legacies, and like them revocable: consequently, not being effectual in the granter's life, they cannot compete with any of his creditors; not even with those whose debts were contracted after the donation. They are understood to be given from a personal regard to the donee, and therefore fall by his predecease. No deed, after delivery, is to be presumed a *donatio mortis causa*; for revocation is excluded by delivery.

33. Deeds are not presumed, *in dubio*, to be donations. Hence, a deed by a debtor to his creditor, if donation be not expressed, is presumed to be granted in security or satisfaction of the debt; but bonds of provision to children are, from the presumption of paternal affection, construed to be intended as an additional patrimony: yet a tocher, given to a daughter in her marriage-contract, is presumed to be in satisfaction of all former bonds and debts; because marriage contracts usually contain the whole provisions in favour of the bride. One who alimnets a person that is come of age, without an express paction for board, is presumed to have entertained him as a friend, unless in the case of those who earn their living by the entertainment or board of strangers. But alimony given to minors, who cannot bargain for themselves, is not accounted a donation; except either where it is presumed, from the near relation of the person alimneting, that it was given *ex pietate*; or where the minor had a father or curators, with whom a bargain might have been made.

SECT. XVI. *Of the dissolution or extinction of obligations.* cxxvi.

OBLIGATIONS may be dissolved by *performance or extinction of obligations, as performance.* *implement, consent, compensation, novation, and confusion.*

(1.) By *specific performance*: thus, an obligation for a sum of money is extinguished by payment. The creditor is not obliged to accept of payment by parts, unless where the sum is payable by different divisions. If a debtor in two or more separate bonds to the same creditor, made an indefinite payment, without ascribing it at the time to any one of the obligations, the payment is applied, 1<sup>st</sup>, To interest, or to sums not bearing interest. 2<sup>dly</sup>, To the sums that are least secured, if the debtor thereby incurs no rigorous penalty. But, 3<sup>dly</sup>, If this application be penal on the debtor, e. g. by suffering the legal of an adjudication to expire, the payment will be applied so as to save the debtor from that forfeiture. Where one of the debts is secured by a cautioner, the other not, the application is to be so made, *ceteris paribus*, that both creditor and cautioner may have equal justice done to them.

2. Payment made by the debtor upon a mistake in fact, to one whom he believed, upon probable grounds, to have the right of receiving payment, extinguishes the obligation. But payment made to one, to whom the law denies the power of receiving it, has not this effect; as if a debtor, seized by letters of caption, should make payment to the messenger; for *ignorantia juris neminem excusat*. In all debts, the debtor, if he be not interpellated, may safely pay before the term, except in tack-duties or feu-duties; the payment whereof, before the terms at which they

are made payable, is construed to be collusive, in a question with a creditor of the landlord or superior. Payment is *in dubio* presumed, by the voucher of the debt being in the hands of the debtor; *chirographum, apud debitorem reperitur, presumitur solutum.*

By consent

3. Obligations are extinguishable by the consent of the creditor, who, without full implement, or even any implement, may renounce the right constituted in his own favour. Though a discharge or acquittance granted by one whom the debtor *bona fide* took for the creditor, but who was not, extinguishes the obligation, if the satisfaction made by the debtor was real; yet where it is imaginary, the discharge will not free him from paying to the true creditor the debt for which he had made no prior satisfaction. In all debts which are constituted by writing, the extinction, whether it be by specific performance or bare consent, must be proved, either by the oath of the creditor, or by a discharge in writing; and the same solemnities which law requires in the obligation, are necessary in the discharge: but, where payment is made, not by the debtor himself, but by the creditor's intromission with the rents of the debtor's estate, or by delivery to him of goods in name of the debtor, such delivery or intromission, being *facti*, may be proved by witnesses, though the debt should have been not only constituted by writing, but made real on the debtor's lands by adjudication.

4. A discharge, though it should be general, of all that the granter can demand, extends not to debts of an uncommon kind, which are not presumed to have been under the granter's eye. This doctrine applies also to general assignments. In annual payments, as of rents, feu-duties, interest, &c. three consecutive discharges by the creditor, of the yearly or termly duties, presume the payment of all precedings. Two discharges by the ancestor, and the third by the heir, do not infer this presumption, if the heir was ignorant of the ancestor's discharges. And discharges by an administrator, as a factor, tutor, &c. presume only the payment of all preceding duties incurred during his administration. This presumption arises from repeating the discharges thrice successively; and so does not hold in the case of two discharges, though they should include the duties of three or more terms.

By compensation.

5. Where the same person is both creditor and debtor to another, the mutual obligations, if they are for equal sums, are extinguished by *compensation*; if for unequal, still the lesser obligation is extinguished, and the greater diminished, as far as the concurrence of debit and credit goes. To found compensation, (1.) Each of the parties must be debtor and creditor at the same time. (2.) Each of them must be debtor and creditor in his own right. (3.) The mutual debts must be of the same quality: hence, a sum of money cannot be compensated with a quantity of corns; because, till the prices are fixed, at which the corns are to be converted into money, the two debts are incommensurable. Lastly, compensation cannot be admitted, where the mutual debts are not clearly ascertained, either by a written obligation, the sentence of a judge, or the oath of the party. Where this requires but a short discussion, sentence for the pursuer is delayed for some time, *ex equitate*, that the defender may make good his ground of com-

penation. Where a debt for fungibles is ascertained in money by the sentence of a judge, the compensation can have no effect farther back than the liquidation; because, before sentence, the debts were incommensurable: but, where a debt for a sum of money is, in the course of a suit, constituted by the oath of the debtor, the compensation, after it is admitted by the judge, operates *retro*, in so far as concerns the currency of interest, to the time when, by the parties acknowledgment, the debt became due: for, in this case, the debtor's oath is not what creates the debt, or makes it liquid; it only declares that such a liquid sum was truly due before. Compensation cannot be offered after decree, either by way of suspension or reduction; unless it has been formerly pleaded, and unjustly repelled. Decrees in absence are excepted.

6. The right of *retention*, which bears a near resemblance to compensation, is chiefly competent, where the mutual debts, not being liquid, cannot be the ground of compensation; and it is sometimes admitted *ex equitate*, in liquid debts, where compensation is excluded by statute: thus, though compensation cannot be pleaded after decree, either against a creditor or his assignee; yet, if the original creditor should become bankrupt, the debtor, even after decree, may retain against the assignee, till he gives security for satisfying the debtor's claim against the cedent. This right is frequently founded in the expence disbursed or work employed on the subject retained, and so arises from the mutual obligations incumbent on the parties. It has never been disputed that retention of goods was competent, until payment or satisfaction of the debt incurred in relation to these goods; but it was found by the court of session, in a case which was very lately before them, that goods could not be retained by a manufacturer until payment of a prior debt; the debt incurred upon the goods in his hand being offered; and although the debtor had become bankrupt, and the manufacturer must otherwise rank as a common creditor for his prior debt. But retention may be sustained, though the debt due to him who claims it does not arise from the nature of the obligation by which he is debtor: thus, a factor on a land-estate may retain the sums levied by him in consequence of his factory, not only till he be paid of the disbursements made on occasion of such estate, but also till he be discharged from the separate engagements he may have entered into on his constituent's account.

7. Obligations are dissolved by *novation*, whereby one obligation is changed into another, without changing either the debtor or creditor. The first obligation being thereby extinguished, the cautioners in it are loosed, and all its consequences discharged; so that the debtor remains bound only by the last. As the creditor to whom a right is once constituted, ought not to lose it by implication, novation is not easily presumed, and the new obligation is construed to be merely corroborative of the old; but, where the second obligation expressly bears to be *in satisfaction* of the first, these words must necessarily be explained into novation. Where the creditor accepts of a new debtor, in place of the former who is discharged, this method of extinction is called *delegation*.

8. Obligations are extinguished *confusione*, where the debt is

By confession.

Law of Scotland.

Law of Scotland.

debt and credit meet in the same person, either by succession or singular title, e. g. when the debtor succeeds to the creditor, or the creditor to the debtor, or a stranger to both; for one cannot be debtor to himself. If the succession, from which the *confusio* arises, happens afterwards to be divided, so as the debtor and creditor come again to be different persons; the *confusio* does not produce an extinction, but only a temporary suspension, of the debt.

intimation: nevertheless, as there is nothing in these conveyances which can of themselves put the debtor *in mala fide*, he is therefore *in tuto* to pay to the wife, or to the original creditor in the debt adjudged, till the marriage or adjudication be notified to him. Assignments of moveable subjects, though they be intimated, if they are made *retenta possessione*, (the cedent retaining the possession), cannot hurt the cedent's creditors; for such rights are presumed, in all questions with creditors, to be collusive, and granted in trust for the cedent himself.

SECT. XVII. Of Assignations.

HERITABLE rights, when they are cloathed with investment, are transmitted by disposition, which is a writing containing procuratory of resignation and precept of seisin; but those which either require no seisin, or on which seisin has not actually followed, are transmissible by simple assignation. He who grants the assignation is called the *cedent*; and he who receives it, the *assignee* or *cessionary*: if the assignee conveys his right to a third person, the deed of conveyance is called a *translation*; and if he assigns it back to the cedent, a *retrocession*. Certain rights are, from the uses to which they are destined, incapable of transmission, as alimentary rights: others cannot be assigned by the person invested in them, without special powers given to him; as tacks, reversions: the transmission of a third sort, is not presumed to be intended, without an express conveyance; as of paraphernal goods, which are so proper to the wife, that a general assignation, by her to her husband, of all that did or should belong to her at her decease, does not comprehend them. A life-right is, by its nature, incapable of a proper transmission; but its profits may be assigned, while it subsists.

5. An assignation carries to the assignee the whole right of the subject conveyed, as it was in the cedent; and consequently, he may use diligence, either in his cedent's name while he is alive, or in his own.

6. After an assignation is intimated, the debtor cannot prove a payment, or compensation, by the oath of the cedent, who has no longer any interest in the debt; unless the matter has been made litigious by an action commenced prior to the intimation: but the debtor may refer to the oath of the assignee, who is in the right of the debt, that the assignment was gratuitous, or in trust for the cedent: either of which being proved, the oath of the cedent will affect the assignee. If the assignation be in part onerous, and in part gratuitous, the cedent's oath is good against the assignee, only in so far as his right is gratuitous. All defences competent against the original creditor in a moveable debt, which can be proved otherwise than by his oath, continue relevant against even an onerous assignee; whose right can be no better than that of his author, and must therefore remain affected with all the burdens which attended it in the author's person.

SECT. XVIII. Of arrestments and poindings.

THE diligences, whereby a creditor may affect his debtor's moveable subjects, are *arrestment* and *poinding*. By *arrestment* is sometimes meant the securing of a criminal's person till trial; but as it is understood in the rubric of this title, it is the order of a judge, by which he who is debtor in a moveable obligation to the arrester's debtor, is prohibited to make payment or delivery till the debt due to the arrester be paid or secured. The arrester's debtor is usually called the common debtor; because, where there are two or more competing creditors, he is debtor to all of them. The person in whose hands the diligence is used is styled the arresee.

2. Assignations must not only be delivered to the assignee, but intimated by him to the debtor. Intimations are considered as so necessary for completing the conveyance, that in a competition between two assignations, the last, if first intimated, is preferred.

3. Though, regularly, intimation to the debtor is made by an instrument, taken in the hands of a notary, by the assignee or his procurator; yet the law admits equipollencies, where the notice of the assignment given to the debtor is equally strong. Thus, a charge upon letters of horning at the assignee's instance, or a suit brought by him against the debtor, supplies the want of intimation; these being judicial acts, which expose the conveyance to the eyes both of the judge and of the debtor; or the debtor's promise of payment by writing to the assignee, because that is in effect a corroborating of the original debt. The assignee's possession of the right, by entering into payment of the rents or interest, is also equal to an intimation; for it imports, not only notice to the debtor, but his actual compliance: but the debtor's private knowledge of the assignment is not sustained as intimation.

4. Certain conveyances need no intimation. (1.) Indorsations of bills of exchange; for these are not to be fettered with forms, introduced by the laws of particular states. (2.) Bank-notes are fully conveyed by the bare delivery of them; for as they are payable to the bearer, their property must pass with their possession. (3.) Adjudication, which is a judicial conveyance, and marriage, which is a legal one, carry the full right of the subjects thereby conveyed, without

2. Arrestment may be laid on by the authority either of the supreme court, or of an inferior judge. In the first case, it proceeds either upon special letters of arrestment, or on a warrant contained in letters of horning; and it must be executed by a messenger. The warrants granted by inferior judges are called precepts of arrestment, and they are executed by the officer proper to the court. Where the debtor to the common debtor is a pupil, arrestment is properly used in the hands of the tutor, as the pupil's administrator: this doctrine may perhaps extend to other general administrators, as commissioner, &c. But arrestment, used in the hands of a factor or steward, cannot found an action of forthcoming without calling the constituent. Where the debtor to the common debtor is a corporation, arrestment must be used in the hands of the directors or

treasurer, who represent the whole body. Arrestment, when it is used in the hands of the debtor himself, is inept; for that diligence is intended only as a restraint upon third parties.

3. All debts, in which one is personally bound, tho' they should be heritably secured, are grounds upon which the creditor may arrest the moveable estate belonging to his debtor. Arrestment may proceed on a debt, the term of payment whereof is not yet come, in case the debtor be *vogens ad insipiam*. If a debt be not yet constituted by decree or registration, the creditor may raise and execute a summons against his debtor for payment, on which pending action arrestment may be used, in the same manner as inhibition, which is called *arrestment upon a dependence*. If one's ground of credit be for the performance of a fact, or if his depending process be merely declaratory, without a conclusion of payment or delivery, such claims are not admitted to be sufficient grounds for arrestment.

What debts  
arrestable.

4. Moveable debts are the proper subject of arrestment; under which are comprehended conditional debts, and even depending claims. For lessening the expence of diligence to creditors, all bonds which have not been made properly heritable by feisin are declared arrestable: but this does not extend to adjudications, wadsets, or other personal rights of lands, which are not properly debts. Certain moveable debts are not arrestable. (1.) Debts due by bill, which pass from hand to hand as bags of money. (2.) Future debts; for though inhibition extends to *adquirenda* as well as *adquisita*, yet arrestment is limited, by its warrant, to the debt due at the time of serving it against the arrestee. Hence, an arrestment of rents or interest carries only those that have already either fallen due or at least become current. Claims, depending on the issue of a suit, are not considered as future debts; for the sentence, when pronounced, has a retrospect to the period at which the claim was first founded. The like doctrine holds in conditional debts. (3.) Alimentary debts are not arrestable; for these are granted on personal considerations, and so are not communicable to creditors: but the past interest due upon such debt may be arrested by the person who has furnished the alimony. One cannot secure his own effects to himself for his maintenance, so as they shall not be affectable by his creditors. Salaries annexed to offices granted by the king, and particularly those granted to the judges of the Session, and the fees of servants, are considered as alimentary funds; but the surplus fee, over and above what is necessary for the servant's personal uses, may be arrested. It has also been found, that a wadset sum consigned after an order of redemption used, but before decret of declarator, is not arrestable.

Effect of  
breach of  
arrestment

5. If, in contempt of the arrestment, the arrestee shall make payment of the sum, or deliver the goods arrested, to the common debtor, he is not only liable criminally for breach of arrestment, but he must pay the debt again to the arrester. As the law formerly stood, an arrestment used at the market cross of Edinburgh, pier and shore of Leith, against a person furth of the kingdom, was good; so that if the arrestee made payment to his creditor after the date of the arrestment, he was found liable in second payment to the arrester, because he had done all in his power to notify

N<sup>o</sup> 178.

his diligence. This, however, is very properly altered by § 3. of the act of the 23d Geo. III. which declares, that an arrestment used at the market cross of Edinburgh, pier and shore of Leith, in the hands of any person out of the kingdom, without other sufficient notification, shall not interpel the arrestee from paying *bona fide* to the original creditor. Arrestment is not merely prohibitory, as inhibitions are; but is a step of diligence which founds the user in a subsequent action; whereby the property of the subject arrested may be adjudged to him. It therefore does not, by our latter practice, fall by the death of the arrestee; but continues to subsist, as a foundation for an action of forthcoming against his heir, while the subject arrested remains *in medio*. Far less is arrestment lost, either by the death of the arrester, or of the common debtor.

Law of  
Scotland.

6. Where arrestment proceeds on a depending ac- Looking of  
turity, it may be loosed by the common debtor's giving arrestment.  
security to the arrester for his debt in the event it shall be found due. Arrestment founded on decrees, or on registered obligations, which in the judgment of law are decrees, cannot be loosed but upon payment or consignation; except, (1.) Where the term of payment of the debt is not yet come, or the condition has not yet existed. (2.) Where the arrestment has proceeded on a registered contract, in which the debts or mutual obligations are not liquid. (3.) Where the decree is suspended, or turned into a libel; for, till the suspension be discussed, or the pending action concluded, it cannot be known whether any debt be truly due. A loosing takes off the *nexus* which had been laid on the subject arrested; so that the arrestee may thereafter pay safely to his creditor, and the cautioner is substituted in place of the arrestment, for the arrester's security: yet the arrester may, while the subject continues with the arrestee, pursue him in a forthcoming, notwithstanding the loosing.

7. Arrestment is only an inchoated or begun dili- Forthcom-  
gence; to perfect it, there must be an action brought ing on ar-  
by the arrester against the arrestee, to make the debt restment.  
or subject arrested forthcoming. In this action, the common debtor must be called for his interest, that he may have an opportunity of excepting to the lawfulness or extent of the debt on which the diligence proceeded. Before a forthcoming can be pursued, the debt due by the common debtor to the arrester must be liquidated; for the arrester can be no further intitled to the subject arrested than to the extent of the debt due to him by the common debtor. Where the subject arrested is a sum of money, it is, by the decree of forthcoming, directed to be paid to the pursuer towards satisfying his debt; where goods are arrested, the judge ordains them to be exposed to sale, and the price to be delivered to the pursuer. So that, in either case, decrees of forthcoming are judicial assignations to the arrester of the subject arrested.

8. In all competitions, regard is had to the dates, not of the grounds of debt, but of the diligences pro- Preferen-  
ceeding upon them. In the competition of arrestments, in ar-  
the preference is governed by their dates, according to restments.  
the priority even of hours, where it appears with any certainty which is the first. But, as arrestment is but a begun diligence, therefore if a prior arrester shall neglect to insist in an action of forthcoming for such a time as may be reasonably construed into a desertion of his

his begun diligence, he loses his preference. But, as dereliction of diligence is not easily presumed, the distance of above two years, between the first arrestment and the decree of forthcoming, was found not to make such a *mora* as to intitle the posterior arrester to a preference. This rule of preference, according to the dates of the several arrestments, holds, by our present practice, whether they have proceeded on a decree or on a dependence; on debts not yet payable, or on debts already payable; provided the pendency shall have been closed, or the debt have become payable, before the issue of the competition.

By act 23d Geo. III. § 2. it is enacted, that when a debtor is made bankrupt, in terms of the act 1696, as thereby extended (clxxxiii. 13.), all arrestments which shall have been used for attaching any personal effects of such bankrupt within thirty days prior to the bankruptcy, or within four kalendar months immediately subsequent, shall be *pari passu* preferable: and in order to save as far as possible the expence of a multiplicity of arrestments, it is declared, that where the effects of a debtor are arrested by any creditor within thirty days before the bankruptcy, or within four months after it, and a process of forthcoming or multiplepointing is brought in which such arrestment is founded on, it shall be competent for any other creditor producing his interest, and making his claim in the said process, at any time before the expiration of the said four months, to be ranked in the same manner as if he had used the form of arrestment; the expence of raising the process, and of the diligence at the instance of the creditor who raises it, being always paid out of the common fund. We here again repeat, that the enactments of this statute are only temporary, and not yet a permanent part of the law of Scotland, whatever they may become when the subject is resumed by the legislature upon the expiry of the act.

9. In the competition of arrestments with assignations, an assignation by the common debtor, intimated before arrestment, is preferable to the arrestment. If the assignation is granted before arrestment, but not intimated till after it, the arrester is preferred.

10. POINTING is that diligence affecting moveable subjects, by which their property is carried directly to the creditor. No pointing can proceed, till a charge be given to the debtor to pay or perform, and the days thereof be expired, except pointings against vassals for their feu-duties, and pointings against tenants for rent, proceeding upon the landlord's own decree; in which the ancient custom of pointing without a previous charge continues. A debtor's goods may be pointed by one creditor, though they have been arrested before by another; for arrestment being but an imperfect diligence, leaves the right of the subject still in the debtor, and so cannot hinder any creditor from using a more perfect diligence, which has the effect of carrying the property directly to himself.

11. No cattle pertaining to the plough, nor instruments of tillage, can be pointed in the time of labouring or tilling the ground, unless where the debtor has no other goods. By labouring-time is understood, that time, in which that tenant, whose goods are to be pointed, is ploughing, though he should have been earlier or later than his neighbours; but summer fallowing does not fall under this rule.

VOL. IX. Part II.

12. In the execution of pointing, the debtor's goods must be appraised, first, on the ground of the lands where they are laid hold on, and a second time at the market-cross of the jurisdiction, by the stated appraisers thereof; or, if there be none, by persons named by the messenger or other officer employed in the diligence. Next, the messenger must, after public intimation by three oyeses, declare the value of the goods according to the second appraisement, and require the debtor to make payment of the debt, including interest and expences. If payment shall be offered to the creditor, or in his absence to his lawful attorney; or if, in case of refusal by them, consignation of the debt shall be made in the hands of the judge-ordinary or his clerk, the goods must be left with the debtor; if not, the messenger ought to adjudge and deliver them over, at the appraised value, to the user of the diligence towards his payment: and the debtor is intitled to a copy of the warrant and executions, as a voucher that the debt is discharged in whole or in part by the goods pointed.

13. Ministers may point for their stipends, upon one appraisement on the ground of the lands, and landlords were always in use to point so, for their rents. Appraisement of the goods at the market-cross of the next royal borough, or even of the next head-borough of stewartry or regality, though these jurisdictions be abolished, is declared as sufficient as if they were carried to the head borough of the shire. Pointing, whether it be considered as a sentence, or as the execution of a sentence, must be proceeded in between sun-rising and sun-setting; or at least it must be finished before the going off of day-light.—The powers of the officer employed in the execution of pointings, are not clearly defined by custom, in the case of a third party claiming the property of the goods to be pointed. This is certain, that he may take the oath of the claimant, upon the verity of his claim; and if from thence it shall appear that the claimant's title is collusive, he ought to proceed in the diligence; but if there remains the least doubt, his safest course is to deliver the goods to the claimant, and to express in his execution the reasons why pointing did not proceed.

14. Any person who stops a pointing *via facti*, on groundless pretences, is liable, both criminally, in the pains of forfeiture (see N<sup>o</sup> clxxxvi. 15.), and civilly, in the value of the goods which might have been pointed by the creditor.

By the foresaid statute 23d Geo. III. § 4. it is declared, that after a person is rendered bankrupt, as thereby directed, no pointing of the moveables belonging to such bankrupt, within 30 days before his bankruptcy, or within four kalendar months thereafter, shall give a preference to such pointer over the other lawful creditors of the bankrupt; but the goods so pointed shall be considered as *in medio*, and the person receiving the price of them shall be liable to make the same forthcoming, so as that all the other creditors of the bankrupt who are possessed of liquidate grounds of debt or decrees for payment, shall be intitled to their proportion of the same; provided they make their claim by summoning the pointer at any time before the expiration of the said four months, deducting always the expence of such pointing from the first end of the price of such goods, together with 20 *per cent.* on the appraised value, which the pointer shall retain

messengers  
in pointing.

Law of  
Scotland.

to account of his debt in preference to the other creditors; reserving liberty to him to rank on the remaining sum for the full amount of the debt contained in his diligence. And it is by the said act further declared, that where any person concerned in trade or manufactures is bankrupt, as before mentioned, it may be lawful for any creditor, to the amount of L. 100, or any two creditors to the amount of L. 150, or any three or more creditors to the amount of L. 200 or upwards, to apply for sequestration of the estate real and personal belonging to the debtor: after awarding which, an interim factor, and then a trustee, shall be chosen by the creditors, who is to conduct the business of the sequestration, according to the various rules fixed and laid down by the statute. The act, however, expressly excludes all others, except those concerned in trade or manufactures, from the benefit of the sequestration; but it is probable, when it comes to be renewed or digested in another form, this part of it will suffer an alteration.

clxxix.

SECT. XIX. *Of Prescription.*

Precription.

PRESCRIPTION, which is a method, both of establishing and of extinguishing property, is either *positive* or *negative*. *Positive* prescription is generally defined, as the Roman *usucapio*. The acquisition of property (it should rather be, when applied to our law, the securing it against all further challenge) by the possessor's continuing his possession for the time which law has declared sufficient for that purpose: *negative*, is the loss or amission of a right, by neglecting to follow it forth, or use it, during the whole time limited by law. The doctrine of prescription, which is, by some writers, condemned as contrary to justice, has been introduced, that the claims of negligent creditors might not subsist for ever, that property might be at last fixed, and forgeries discouraged, which the difficulty of detecting must have made exceeding frequent, if no length of time had limited the legal effect of writings.

Positive.

2. Positive prescription was first introduced into our law by 1617, c. 12. which enacts, that whoever shall have possessed his lands, annualrents, or other heritages, peaceably, in virtue of infestments, for 40 years continually after their dates, shall not thereafter be disquieted in his right by any person pretending a better title. Under *heritages* are comprehended every right that is *fundo annexum*, and capable of continual possession. Continued possession, if proved as far back as the memory of man, presumes possession upwards to the date of the infestment. The whole course of possession must by the act be founded on seigns; and consequently no part thereof on the bare right of apparency: but 40 years possession, without seign, is sufficient in the prescription of such heritable rights as do not require seign. The possession must also be without any *lawful* interruption, *i. e.* it must neither be interrupted *via facti*, nor *via juris*. The prescription of subjects not expressed in the infestment as part and pertinent of another subject specially expressed, has been explained, N<sup>o</sup> clxvii. 6.

3. The act requires, that the possessor produce, as his title of prescription, a charter of the lands preceding the 40 years possession, with the seign following on it: and where there is no charter extant, seigns, one or more, standing together for 40 years, and

proceeding either on retours or precepts of *clare constat*. This has given rise to a reasonable distinction observed in practice, between the prescription of a singular successor, and of an heir. Singular successors must produce for their title of prescription, not only a seign, but its warrant, as a charter, disposition, &c. either in their own person, or in that of their author: but the production, by an heir, of seigns, one or more, standing together for 40 years, and proceeding on retours or precepts of *clare constat*, is sufficient. The heir is not obliged to produce the retours or precepts on which his seigns proceed, nor is the singular successor obliged to produce the ground of his charter; so that if the title of prescription produced be a fair deed, and a sufficient title of property, the possessor is secure by the act, which admits no ground of challenge, but falsehood. A special statute, for establishing the positive prescription in moveable rights, was not necessary; for, since a title in writing is not requisite for the acquiring of these, the negative prescription, by which all right of action for recovering their property is cut off, effectually secures the possessor.

Law of  
Scotland.

4. The negative prescription of obligations, by the lapse of 40 years, was introduced into our law long before the positive, (1469, c. 29.—1474, c. 55.) This prescription is now amplified by the foresaid act (1617), which has extended it to all actions competent upon heritable bonds, reversions, and others whatsoever; unless where the reversions are either incorporated in the body of the wadset-right, or regillered in the register of reversions: And reversions so incorporated, or regillered, are not only exempted from the negative prescription, but they are an effectual bar against any person from pleading the positive.

Negative  
prescription.

5. A shorter negative prescription is introduced by A shorter negative prescription. statute, in certain rights and debts. Actions of spuilzie, ejection, and others of that nature, must be pursued within three years after the commission of the fact on which the action is founded. As in spuilzies and ejections, the pursuer was entitled, *in odium* of violence, to a proof by his own oath *in litem*, and to the violent profits against the defender, the statute meant only to limit these special privileges by a three years prescription, without cutting off the right of action, where the claim is restricted to simple restitution. Under the general words, *and others of that nature*, are comprehended all actions where the pursuer is admitted to prove his libel by his own oath *in litem*.

6. Servants fees, house-rents, mens ordinaries, (*i. e.* money due for board), and merchants accounts, fall under the triennial prescription, (by 1579, c. 83.) There is also a general clause subjoined to this statute, of *other the like debts*, which includes alimentary debts, wages due to workmen, and accounts due to writers, agents, or procurators. These debts may, by this act, be proved after the three years, either by the writing or oath of the debtor; so that they prescribe only as to the mean of proof by witnesses; but after the three years, it behoves the creditor to refer to the debtor's oath, not only the constitution, but the subsistence of the debt. In the prescription of house-rents, servants fees, and alimony, each term's rent, fee, or alimony, runs a separate course of prescription; so that in an action for these the claim will be restricted to the arrears incurred within the three years immediately before

Prescription of  
wants fees  
&c.

before the citation: But, in accounts, prescription does not begin till the last article; for a single article cannot be called an account. Actions of removing must also be pursued within three years after the warning. Reductions of erroneous retours prescribe, if not pursued within 20 years.

7. Ministers stipends and multures prescribe in five years after they are due; and arrears of rent, five years after the tenant's removing from the lands. As the prescription of mails and duties was introduced in favour of poor tenants, that they might not suffer by neglecting to preserve their discharges, a proprietor of lands subject to a liferent, who had obtained a lease of all the liferented lands from the liferenter, is not intitled to plead it, nor a tackman of one's whole estate, who had by the lease a power of removing tenants. Bargains concerning moveables, or sums of money which are proveable by witnesses, prescribe in five years after the bargain. Under these are included sales, locations, and all other consensual contracts, to the constitution of which writing is not necessary. But all the abovementioned debts, may, after the five years, be proved, either by the oath or the writing of the debtor; of which above, (par. 6.) A quinquennial prescription is established in arrelements, whether on decrees or depending actions: The first prescribe in five years after using the arrelement, and the last in five years after sentence is pronounced on the depending action.

8. No person binding for or with another, either as cautioner or co principal, in a bond or contract for a sum of money, continues bound after seven years from the date of the bond, provided he has either a clause of relief in the bond, or a separate bond of relief, intimated to the creditor, at his receiving the bond. But all diligence used within the seven years against the cautioner shall stand good. As this is a public law, intended to prevent the bad consequences of rash engagements, its benefit cannot, before the lapse of the seven years, be renounced by the cautioner. As it is correctory, it is strictly interpreted: Thus, bonds bearing a mutual clause of relief *pro rata*, fall not under it; nor bonds of corroboration, nor obligations, where the condition is not purified, or the term of payment not come within the seven years; because no diligence can be used on these. The statute excludes all cautionries for the faithful discharge of offices; these not being obligations in a bond or contract for sums of money. And practice has denied the benefit of it to all judicial cautioners, as cautioners in a suspension.—Actions of count and reckoning, competent either to minors against their tutors or curators, or *vice versa*, prescribe in ten years after the majority or death of the minor.

9. Holograph bonds, missive letters, and books of account, not attested by witnesses, prescribe in 20 years, unless the creditor shall thereafter prove the verity of the subscription by the debtor's oath. It is therefore sufficient to save from the effect of this prescription, that the constitution of the debt be proved by the party's oath after the 20 years; whereas, in stipends, merchants accounts, &c. not only the constitution, but the subsistence of the debt, must be proved by writing or the debtor's oath, after the term of prescription. Some lawyers extend this prescrip-

tion of holograph writings to all obligations for sums not exceeding L. 100 Scots, which are not attested by witnesses; because though these are in practice sustained, yet they ought not to have the same duration with deeds attested by witnesses. Though in the short prescriptions of debts, the right of action is for ever lost, if not exercised within the time limited; yet where action was brought on any of those debts, before the prescription was run, it subsisted, like any other right, for 40 years. As this defeated the purpose of the acts establishing these prescriptions, all processes upon warnings, spuilzies, ejections, or arrelements, or for payment of the debts contained in act 1669, c. 9. are by the said act, joined with 1685, c. 14. declared to prescribe in five years, if not wakened within that time; see N<sup>o</sup> clxxxiii. 26.

10. Certain obligations are lost by the lapse of less than 40 years, without the aid of statute, where the nature of the obligation, and the circumstances of parties, justify it: thus, bills which are not intended for lasting securities, produced no action, where the creditor had been long silent, unless the subsistence of the debt be proved by the debtor's oath; but the precise time was not fixed by practice. But the duration of bills is now limited to six years by the 12 Geo III.; rendered perpetual by 23 Geo. III. Thus also, a receipt for bills granted by a writer to his employer, not insilled upon for 23 years, was found not productive of an action. The prescriptions of the restitution of minors, of the benefit of inventory, &c. are explained in their proper places.

11. In the positive prescription, as established by the act 1617 the continued possession for 40 years, proceeding upon a title of property not chargeable with falsehood, secures the possessor against all other grounds of challenge, and so presumes *bona fides, presumptione juris et de jure*. In the long negative prescription, *bona fides* in the debtor is not required: the creditor's neglecting to insist for so long a time, is construed as an abandoning of his debt, and so is equivalent to a discharge. Hence, though the subsistence of the debt should be referred to the debtor's own oath, after the 40 years, he is not liable.

12. Prescription runs *de momento in momentum*: the whole time defined by law must be completed, before a right can be either acquired or lost by it; so that interruption, made on the last day of the 40th year, breaks its course. The positive prescription runs against the sovereign himself, even as to his annexed property; but it is generally thought he cannot suffer by the negative: he is secured against the negligence of his officers in the management of processes, by express statute, 1600, c. 14. The negative, as well as the positive prescription, runs against the church, though churchmen have but a temporary interest in their benefices. But because the rights of beneficiaries to their stipends are liable to accidents, through the frequent change of incumbents, 13 years possession does, by a rule of the Roman chancery which we have adopted, found a presumptive title in the beneficiary: but this is not properly prescription; for if by titles recovered, perhaps out of the incumbent's own hands, it shall appear that he has possessed tithes or other subjects to a greater extent than he ought, his possession will be restricted accordingly. This right

Law of  
Scotland.

must not be confounded with that established in favour of churchmen, which is confined to church lands and rents, and constitutes a proper prescription upon a possession of 30 years.

13. The clause in the act 1617, saving minors from prescription, is extended to the positive, as well as to the negative prescription; but the exception of minority is not admitted in the case of hospitals for children, where there is a continual succession of minors, that being a *casus infolitus*. Minors are expressly excepted in several of the short prescriptions, as 1579, c. 18.—1669, c. 9.; but where law leaves them in the common case, they must be subject to the common rules.

14. Prescription does not run *contra non valentem agere*, against one who is barred, by some legal incapacity, from pursuing; for in such case, neither negligence nor dereliction can be imputed to him. This rule is, by a favourable interpretation, extended to wives, who *ex reverentia maritali* forbear to pursue actions competent to them against their husbands. On the same ground, prescription runs only from the time that the debt or right could be sued upon. Thus, inhibition prescribes only from the publishing of the deed granted to the inhibitor's prejudice; and in the prescription of removings, the years are computed only from the term at which the defender is warned to remove. Neither can prescription run against persons who are already in possession, and so can gain nothing by a pursuit. Thus, where a person, who has two adjudications affecting the same lands, is in possession upon one of them, prescription cannot run against the other during such possession.

15. Certain rights are incapable of prescription: (1.) Things that law has exempted from commerce. (2.) *Res mere facultatis*, e. g. a faculty to charge a subject with debts, to revoke, &c. cannot be lost by prescription; for faculties may, by their nature, be exercised at any time: hence, a proprietor's right of using any act of property on his own grounds, cannot be lost by the greatest length of time. (3.) Exceptions competent to a person for eliding an action, cannot prescribe, unless the exception is founded on a right productive of an action, e. g. compensation; such right must be insisted on within the years of prescription. (4.) Obligations of yearly pensions or payments, though no demand has been made on them for 40 years, do not suffer a total prescription, but still subsist as to the arrears fallen due within that period; because prescription cannot run against an obligation till it be payable, and each year's pension or payment is considered as a separate debt.

16. No right can be lost *non utendo* by one, unless the effect of that prescription be to establish it in another. Hence the rule arises, *juri sanguinis nunquam prescribitur*. Hence also, a proprietor of land cannot lose his property by the negative prescription, unless he who objects it can himself plead the positive. On the same ground, a superior's right of feu duties cannot be lost *non utendo*; because, being inherent in the superiority, it is truly a right of lands that cannot suffer the negative prescription, except in favour of one who can plead the positive; which the vassal cannot do, being destitute of a title. This rule applies also to parsonage tithes, which are an inherent burden

upon all lands not specially exempted; and from which therefore the person liable cannot prescribe an immunity by bare non-payment: but such vicarage tithes as are only due where they are established by usage, may be lost by prescription. In all these cases, though the radical right cannot suffer the negative prescription, the bygone duties, not demanded within the 40 years, are lost to the proprietor, superior, or titular.

17. Prescription may be interrupted by any deed whereby the proprietor or creditor uses his right or ground of debt. In all interruptions, notice must be given to the possessor of the subject, or the debtor, that the proprietor or creditor intends to sue upon his right. All writings whereby the debtor himself acknowledges the debt, and all processes for payment brought, or diligences used against him upon his obligation, by horning, inhibition, arrestment, &c. must be effectual to interrupt prescription.

18. Interruptions, by citation upon libelled summonses, where they are not used by a minor, prescribe, if not renewed every seven years: but where the appearance of parties, or any judicial act has followed thereupon, it is no longer a bare citation, but an action which subsists for 40 years. It has been found, that the sexennial prescription of bills is not interrupted by a blank citation, as practised in the court of admiralty. Citations for interrupting the prescription of real rights must be given by messengers; and the summonses, on which such citations proceed, must pass the signet upon the bill, and be registered within 60 days after the execution, in a particular register appointed for that purpose: and where interruption of real rights is made *via facti*, an instrument must be taken upon it, and recorded in the said register; otherwise it can have no effect against singular successors.

19. Interruption has the effect to cut off the course of prescription, so that the person prescribing can avail himself of no part of the former time, but must begin a new course, commencing from the date of the interruption. Minority, therefore, is no proper interruption: for it neither breaks the course of prescription, nor is it a document or evidence taken by the minor on his right: it is a personal privilege competent to him, by which the operation of the prescription is indeed suspended during the years of minority, which are therefore discounted from it; but it continues to run after majority, and the years before and after the minority may be conjoined to complete it. The same doctrine applies to the privilege arising from one's incapacity to act.

20. Diligence used upon a debt, against any one of two or more co-obligants, preserves the debt itself, and so interrupts prescription against all of them; except in the special case of cautioners, who are not affected by any diligence used against the principal debtor. In the same manner, a right of annualrent, constituted upon two separate tenements, is preserved as to both from the negative prescription, by diligence used against either of them. But whether such diligence has also the effect to hinder the possessor of the other tenement by singular titles from the benefit of the positive prescription, may be doubted.

univer-

SECT. XX. *Of succession in heritable rights.*

SINGULAR successors are those who succeed to a person yet alive, in a special subject by singular titles; but succession, in its proper sense, is a method of transmitting rights from the dead to the living. Heritable rights descend by succession to the *heir* properly so called; moveable rights to the *executors*, who are sometimes said to be heirs in moveables. Succession is either by *special destination*, which descends to those named by the proprietor himself; or *legal*, which devolves upon the persons whom the law marks out for successors, from a presumption, that the proprietor would have named them had he made a destination. The first is in all cases preferred to the other, as presumption must yield to truth.

er of  
ffion  
ritage.

2. In the succession of heritage, the heirs at law are otherwise called heirs general, heirs whatsoever, or heirs of line; and they succeed by the right of blood, in the following order. First, descendants; among these, sons are preferred to daughters, and the eldest son to all the younger. Where there are daughters only, they succeed equally, and are called heirs-portioners. Failing immediate descendants, grandchildren succeed; and in default of them, great-grandchildren; and so on *in infinitum*: preferring, as in the former case, males to females, and the eldest male to the younger.

teral.

3. Next after descendants, collaterals succeed; among whom the brothers *german* of the deceased have the first place. But as, in no case, the legal succession of heritage is, by the law of Scotland, divided into parts, unless where it descends to females; the immediate younger brother of the deceased excludes the rest, according to the rule, *heritage descends*. Where the deceased is himself the youngest, the succession goes to the immediate elder brother, as being the least deviation from this rule. If there are no brothers *german*, the sisters *german* succeed equally: then brothers *consanguinean*, in the same order as brothers *german*; and failing them, sisters *consanguinean* equally. Next, the father succeeds. After him, his brothers and sisters, according to the rules already explained; then the grand-father; failing him, his brothers and sisters; and so upwards, as far back as propinquity can be proved. Though children succeed to their mother, a mother cannot to her child; nor is there any succession by our law through the mother of the deceased; in so much that one brother *uterine*, *i. e.* by the mother only, cannot succeed to another, even in that estate which flowed originally from their common mother.

successor  
by the  
ner.

4. In heritage there is a *right of representation*, by which one succeeds, not from any title in himself, but in the place, and as representing some of his deceased ascendants. Thus, where one leaves a younger son, and a grandchild by his eldest, the grandchild, though farther removed in degree from the deceased than his uncle, excludes him, as coming in place of his father the eldest son. Hence arises the distinction between succession *in capita*, where the division is made into as many equal parts as there are *capita* or heirs, which is

effion  
bita  
in

the case of heirs-portioners; and succession *in stirpes*, where the remoter heirs draw no more among them than the share belonging to their ascendent or *stirps*, whom they represent; an example of which may be figured in the case of one who leaves behind him a daughter alive, and two grand-daughters by a daughter deceased. In which case the two grand-daughters would succeed equally to that half which would have belonged to their mother had she been alive.

Succession  
of heirs-  
portioners.

5. In the succession of heirs-portioners, indivisible rights, *e. g.* titles of dignity, fall to the eldest filer. A single right of superiority goes also to the eldest; for it hardly admits a division, and the condition of the vassal ought not to be made worse by multiplying superiors upon him. Where there are more such rights, the eldest may perhaps have her election of the best; but the younger filers are intitled to a recompence, in so far as the divisions are unequal; at least, where the superiorities yield a constant yearly rent. The principal seat of the family falls to the eldest, with the garden and orchard belonging to it, without recompence to the younger filers; but all other houses are divided amongst them, together with the lands on which they are built, as parts and pertinents of these lands. A *precipuum*, however, is due only in the case of succession of heirs-portioners *ab intestato*; and therefore there is no place for it where the succession is taken under a deed.

6. Those heritable rights, to which the deceased did himself succeed as heir to his father or other ancestor, get sometimes the name of heritage in a strict sense, in opposition to the *feuda nova*, or feus of conquest, which he had acquired by singular titles, and which descend, not to his heir of line, but of conquest. This distinction obtains only where two or more brothers or uncles, or their issue, are next in succession; in which case, the immediate younger brother, as heir of line, succeeds to the proper heritage, because that descends; whereas the conquest ascends to the immediate elder brother. It has no place in female succession, which the law divides equally among the heirs-portioners. Where the deceased was the younger brother, the immediate elder brother is heir both of line and of conquest. An estate disposed by a father to his eldest son, is not conquest in the son's person, but heritage; because the son would have succeeded to it, though there had been no disposition. The heir of conquest succeeds to all rights affecting land, which require seisin to perfect them. But teinds go to the heir of line; because they are merely a burden on the fruits, not on the land. Tacks do not fall under conquest, because they are complete rights without seisin: nor personal bonds taken to heirs including executors.

Heirship-  
moveables.

7. The heir of line is intitled to the succession, not only of subjects properly heritable, but to that sort of moveables called *heirship*, which is the best of certain kinds. This doctrine has been probably introduced, that the heir might not have an house and estate to succeed to, quite dismantled by the executor. In that sort which goes by pairs or dozens, the best pair or dozen is the heirship. There is no heirship in fungibles, or things estimated by quantity; as grain, hay, current money, &c. To intitle an heir to this privilege, the deceased must have been either, (1.) A prelate; (2.) A  
baton,

Law of Scotland.

baron, &c. who stood in debt at his death in lands, tho' not erected into a barony; or even in a right of annualrent: Or, (3.) A burgess; not an honorary one, but a trading burgess of a royal borough, or at least one intitled to enter burgesses in the right of his ancestor. Neither the heir of conquest, nor of tailzie, has right to heirship-moveables.

Succession by destination.

8. As to succession by destination, no proprietor can settle any heritable estate, in the proper form of a testament; not even bonds including executors, tho' these are not heritable *ex sua natura*: But, where a testament is in part drawn up in the style of a deed *inter vivos*, such part of it may contain a settlement of heritage, though executors should be named in the testamentary part. The common method of settling the succession of heritage is by disposition, contract of marriage, or simple procuratory of resignation: and, tho' a disposition settling heritage should have neither precept nor procuratory, it founds an action against the heir of line to complete his title to the estate; and thereafter divest himself in favour of the donee. The appellation of tailzie, or entail, is chiefly used in the case of a land estate, which is settled on a long series of heirs substituted one after another. The person first called in the tailzie, is the institute; the rest, the heirs of tailzie, or the substitutes.

Tailzies.

9. Tailzies, when considered in relation to their several degrees of force, are either, (1.) Simple destinations: (2.) Tailzies with prohibitory clauses. (3.) Tailzies with prohibitory, resolutive, and irritant clauses. That is a simple destination, where the persons called to the succession are substituted one after another, without any restraint laid on the exercise of their property. The heirs, therefore, succeeding to such estate, are absolute heirs, and consequently may alter the destination at pleasure.

10. In tailzies with clauses prohibitory, *e. g.* declaring that it shall not be lawful to the heirs to contract debts or alien the lands in prejudice of the succession, none of the heirs can alien gratuitously. But the members of entail may contract debts which will be effectual to the creditors, or may dispose of the estate for onerous causes. In both these sorts, the maker himself may alter the tailzie; except, (1.) Where it has been granted for an onerous cause, as in mutual tailzies; or (2.) Where the maker is expressly disabled, as well as the institute or the heirs.

11. Where a tailzie is guarded with irritant and resolutive clauses, the estate entailed cannot be carried off by the debt, or deed, of any of the heirs succeeding thereto, in prejudice of the substitutes. It was long doubted, whether such tailzies ought to be effectual, even where the superior's consent was adhibited; because they sunk the property of estates, and created a perpetuity of life-rents. They were first explicitly authorized by 1685, *c.* 22. By this statute, the entail must be registered in a special register established for that purpose; and the irritant and resolutive clauses must be inserted, not only in the procuratories, precepts, and feisins, by which the tailzies are first constituted, but in all the after conveyances thereof; otherwise they can have no force against singular successors. But a tailzie, even without these requisites, is effectual against the heir of the granter, or against the institute who accepts of it. It has been found, that an entail,

Their requisites.

tho' completed by infestment before the act 1685, was ineffectual, because not recorded in terms of the act.

Law of Scotland

12. An heir of entail has full power over the entailed estate, except in so far as he is expressly fettered; and as entails are an unfavourable restraint upon property, and a frequent snare to trading people, they are *strictissimi juris*: so that no prohibition or irritancies are to be inferred by implication. By 10 George III. *c.* 51. heirs of entail are intitled (notwithstanding any restrictions in the deed of entail) to improve their estates by granting leases, building farm-houses, draining, inclosing, and exchanging, under certain limitations, and to claim repayment of three-fourths of the expence from the next heir of entail.—This act extends to all tailzies, whether made prior or posterior to the 1685.

Heirs of entail, the powers are restricted

13. An heir, who counteracts the directions of the tailzie, by aliening any part of the estate, charging it with debt, &c. is said to contravene. It is not the simple contracting of debt that infers contravention; the lands entailed must be actually adjudged upon the debt contracted. An heir may, where he is not expressly barred, settle rational provisions on his wife and children, without incurring contravention. It is not quite clear whether the heirs also of the contravener would forfeit their right from the acts or deeds of their predecessor where there is no express clause in the entail settling it; and though the words of the act 1685 (which declares, that entails executed according to the directions of it, shall be effectual not only against the contravener and his heirs, but against creditors), may seem to favour the idea that heirs also would forfeit, the more favourable opinion has received the sanction of our supreme court. For the greater security, however, a clause is now usually inserted in tailzies, declaring, that the contravention of the heir in possession shall not affect his descendants, when such is the intention of the granter.

Contravention, by whom inferred.

14. When the heirs of the last person specially called in a tailzie come to succeed, the irritancies have no longer any person in favour of whom they can operate; and consequently, the fee, which was before tailzied, becomes simple and unlimited in the person of such heirs. By the late act 20th Geo. II. for abolishing wardholdings, the king may purchase lands within Scotland, notwithstanding the strictest entail; and where the lands are in the hands of minors or fatuous persons, his majesty may purchase them from the curators or guardians. And heirs of entail may sell to their vassals the superiorities belonging to the entailed estate; but in all these cases, the price is to be settled in the same manner that the lands or superiorities sold were settled before the sale.

In what cases an heir may sell.

15. Rights, not only of land-estates, but of bonds, are sometimes granted to two or more persons in conjunct fee. Where a right is so granted to two strangers, without any special clause adjoined to it, each of them has an equal interest in the fee, and the part of the deceased descends to his own heir. If the right be taken to the two jointly, and the *longest liver* and their heirs, the several shares of the conjunct has are affectable by their creditors during their lives: but, on the death of any one of them, the survivor has the fee of the whole, in so far as the share of the predeceased remains free, after payment of his debts. Where the right is taken to the two in conjunct fee, and to the heirs

Rights taken in conjunct fee.

heirs of one of them, he to whose heirs the right is taken is the only heir; the right of the other resolves into a simple life-rent: yet where a father takes a right to himself and his son jointly, and to the son's heirs, such right being gratuitous, is not understood to strip the father of the fee, unless a contrary intention shall plainly appear from the tenor of the right.

16. Where a right is taken to a husband and wife, in conjunct fee and life-rent, the husband, as the *persona dignior*, is the only heir: the wife's right resolves into a life-rent, unless it be presumable, from special circumstances, that the fee was intended to be in the wife. Where a right of moveables is taken to husband and wife, the heirs of both succeed equally, according to the natural meaning of the words.

17. Heirs of provision are those who succeed to any subject, in virtue of a provision in the investiture, or other deed of settlement. This appellation is given most commonly to heirs of a marriage. These are more favourably regarded than heirs by simple destination, who have only the hope of succession; for heirs of a marriage, because their provisions are constituted by an onerous contract, cannot be disappointed of them by any gratuitous deed of the father. Nevertheless, as their right is only a right of succession, which is not designed to restrain the father from granting onerous or rational deeds, he continues to have the full power of selling the subject, or charging it with debts, unless a proper right of credit be given to the heir by the marriage contract. e. g. if the father should oblige himself to invest the heir in the lands, or make payment of the sum provided against a day certain, or when the child attains a certain age, &c.; for such rights, when perfected by investiture, or secured by diligence, are effectual against all the posterior deeds of the father, even onerous.

18. Though all provisions to children, by a marriage contract conceived in the ordinary form, being merely rights of succession, are postponed to every onerous debt of the grantor, even to those contracted posterior to the provisions; yet where a father executes a bond of provision to a child actually existing, whether such child be the heir of a marriage or not, a proper debt is thereby created, which, though it be without doubt gratuitous, is not only effectual against the father himself and his heirs, but is not reducible at the instance even of his prior onerous creditors, if he was solvent at the time of granting it. A father may, notwithstanding a first marriage-contract, settle a jointure on a second wife, or provide the children of a second marriage; for such settlements are deemed onerous; but where they are exorbitant, they will be restricted to what is rational: and in all such settlements, where the provisions of the first marriage-contract are encroached upon, the heirs of that marriage have recourse against the father, in case he should afterwards acquire a separate estate, which may enable him to fulfil both obligations.

19. In marriage contracts, the conquest, or a certain part of it, is frequently provided to the issue; by which is understood whatever real addition shall be made to the father's estate during the marriage by purchase or donation. Conquest therefore must be free, i. e. what remains after payment of debts due by the father. As in other provisions, so in conquest; the father is still

heir, and may therefore dispose of it for onerous or rational causes. Where heritable rights are provided to the heirs of a marriage, they fall to the eldest son, for he is the heir at law in heritage. Where a sum of money is so provided, the word *heir* is applied to the subject of the provision, and so marks out the executor, who is the heir in moveables. When an heritable right is pro-  
To bairns

vided equally among the children, if no division be made by the father; for such destination cuts off the exclusive right of the legal heir. No provision granted to bairns, gives a special right of credit to any one child, as long as the father lives: the right is granted *familia*; so that the whole must indeed go to one or other of them; but the father has a power inherent in him, to divide it among them, in such proportions as he thinks best, yet so as none of them may be entirely excluded, except in extraordinary cases.

20. A clause of return is that, by which a sum in a bond or other right, is in a certain event limited to return to the grantor himself, or his heirs. When a right is granted for onerous causes, the creditor may defeat the clause of return, even gratuitously. But, where the sum in the right flows from the grantor, or where there is any other reasonable cause for the provision of return in his favour, the receiver cannot disappoint it gratuitously. Yet since he is heir, the sum may be either assigned by him for an onerous cause, or affected by his creditors.

21. An heir is, in the judgment of law, *eadem persona cum defuncto*, and so represents the deceased universally, not only in his rights, but in his debts: in the first view, he is said to be heir *active*; in the second, *passive*. From this general rule are excepted, heirs substituted in a special bond, and even substituted in a disposition *omnium bonorum*, to take effect at the grantor's death; for such substitutes are considered as singular successors, and their right as an universal legacy, which does not subject the legatee *ultra valorem*, but heirs male or of tailzie, though their right be limited to special subjects, are liable, not merely to the extent of the subject entailed or provided, but *in solidum*; because such rights are designed to carry an universal character, and so infer an universal representation of the grantor. The heir of line is primarily liable for the debts of his predecessor; for he is the most proper heir, and so must be discussed before any other can be pursued; next to him the heir of conquest, because he also succeeds to the *universitas* of the whole heritable rights which his predecessor had acquired by singular titles; then, the heir male, or of a marriage; for their propinquity of blood subjects them more directly than any other heir of tailzie, who may possibly be a stranger; and who for that reason is not liable to be discussed, except for such of the predecessor's debts or deeds as relate specially to the lands tailzied; as to which he is liable even before the heir of line. Heirs portioners are liable *pro rata* for their predecessors debts; but if any of them prove insolvent, the creditor may, after discussing her, insist for her share against the rest, who will be liable in so far as they are *lucrati* by the succession. Where an heir, liable *solidarius*, pays the predecessor's debt, he has relief against the heir who is more directly liable, in respect of whom he is not co-heir, but creditor.

Law of  
Scotland.Apparent  
heirs.

22. Before an heir can have an active title to his ancestor's rights, he must be entered by service and retour. He who is intitled to enter heir, is, before his actual entry, called *apparent heir*. The bare right of apparenity carries certain privileges with it. An apparent heir may defend his ancestor's titles against any third party who brings them under challenge. Tenants may safely pay him their rents; and after they have once acknowledged him by payment, he may compel them to continue it; and the rents not uplifted by the apparent heir belong to his executors, upon his death.

Anus deli-  
berandi.

23. As an heir is, by his entry, subjected universally to his ancestor's debts, apparent heirs have therefore a year (*annus deliberandi*) allowed to them from the ancestor's decease, to deliberate whether they will enter or not; till the expiry of which, though they may be charged by creditors to enter, they cannot be sued in any process founded upon such charge. Though declaratory actions, and others which contain no personal conclusion, may be pursued against the apparent heir, without a previous charge; action does not lie even upon these, within the year, if the heir cannot make the proper defences without incurring a passive title. But judicial sales, commenced against an ancestor, may by special act of federunt be continued upon a citation of the heir, without waiting the year of deliberating. This *annus deliberandi* is computed, in the case of a posthumous heir, from the birth of such heir. An apparent heir, who, by immixing with the estate of his ancestor, is as much subjected to his debts as if he had entered, can have no longer a right to deliberate whether he will enter or not.

Service of  
heirs,

24. All services proceed on briefs from the chancery, which are called *briefs of inquest*, and have been long known in Scotland. The judge, to whom the brief is directed, is required to try the matter by an inquest of 15 sworn men. The inquest, if they find the claim verified, must declare the claimant heir to the deceased, by a verdict or service, which the judge must attest, and return the brief, with the service proceeding on it, to the chancery; from which an extract is obtained called the *retour of the service*.

general and  
special.

25. The service of heirs is either *general* or *special*. A *general* service vests the heir in the right of all heritable subjects, which either do not require seisin, or which have not been perfected by seisin in the person of the ancestor. A public right, therefore, according to the fental law, though followed by seisin, having no legal effects till it be confirmed by the superior, must, as a personal right, be carried by a general service. A *special* service, followed by seisin, vests the heir in the right of the special subjects in which the ancestor died inest.

Entry by  
inventory.

26. If an heir, doubtful whether the estate of his ancestor be sufficient for clearing his debts, shall, at any time within the *annus deliberandi*, exhibit upon oath a full inventory of all his ancestor's heritable subjects, to the clerk of the shire where the lands lie; or, if there is no heritage requiring seisin, to the clerk of the shire where he died; and if, after the same is subscribed by the sheriff or sheriff-depute, the clerk, and himself, and registered in the sheriff's books, the extract thereof shall be registered within forty days after expiry of the *annus deliberandi* in the general register appointed for

N<sup>o</sup> 178.

that purpose, his subsequent entry will subject him no farther than to the value of such inventory. If the inventory be given up and registered within the time prescribed, the heir may serve on it, even after the year.

27. Creditors are not obliged to acquiesce in the value of the estate given up by the heir; but, if they be real creditors, may bring the estate to a public sale, in order to discover its true value; since an estate is always worth what can be got for it. An heir by inventory, as he is in effect a trustee for the creditors, must account for that value to which the estate may have been improved since the death of the ancestor, and he must communicate to all the creditors the eases he has got in transacting with any one of them.

28. Practice has introduced an anomalous sort of entry, without the interposition of an inquest, by the sole consent of the superior; who, if he be satisfied that the person applying to him is the next heir, grants him a precept (called of *clere constat*, from the first words of its recital), commanding his bailie to inest him in the subjects that belonged to his ancestor. The heir, by taking seisin on this precept, becomes *passive*, liable for all the debts of his ancestor; and on the other hand, acquires an active title, as to the subjects contained in the precept in questions with the superior or his heirs; and they may, when followed by seisin, afford a title of prescription: But as no person can be declared an heir by private authority, they cannot bar the true heir from entering after 20 years, as a legal entry would have done; the true heir, in such case, having it still in his power to set aside that right, and obtain himself regularly served at any time within the years of prescription. Of the same nature is the entry by hasp and staple, commonly used in burgage tenements of houses; by which the bailie, without calling an inquest, cognosces or declares a person heir, upon evidence brought before himself; and, at the same time inests him in the subject, by the symbol of the hasp and staple of the door. Charges given by creditors to apparent heirs to enter, stand in the place of an actual entry, so as to support the creditor's diligence (clxxii. 2.).

29. A general service cannot include a special one; since it has no relation to any special subject, and carries only that class of rights on which seisin has not proceeded; but a special service implies a general one of the same kind or character, and consequently carries even such rights as have not been perfected by seisin. Service is not required to establish the heir's right in titles of honour, or offices of the highest dignity; for these descend *jure sanguinis*.

30. An heir, by immixing with his ancestor's estate without entry, subjects himself to his debts, as if he had entered; or, in our law-phrase, incurs a passive title. The only passive title by which an apparent heir becomes liable universally for all his ancestor's debts, is *gestio pro herede*, or his behaving as none but an heir has right to do. Behaviour as heir is inferred from the apparent heir's intromission, after the death of the ancestor, with any part of the lands or other heritable subjects belonging to the deceased, to which he himself might have completed an active title by entry.

31. This passive title is excluded, if the heir's intromission be by order of law; or if it be founded on singular

Law of Scotland  
 singular titles, and not as heir to the deceased. But an apparent heir's purchasing any right to his ancestor's estate, otherwise than at public roup (auktion), or his possessing it in virtue of rights settled in the person of any near relation of the ancestor, to whom he himself may succeed as heir, otherwise than upon purchase by public sale, is deemed behaviour as heir.

32. Behaviour as heir is also excluded, where the intromission is small, unless an intention to defraud the ancestor's creditors be presumable from the circumstances attending it. Neither is behaviour inferred against the apparent heir, from the payment of his ancestor's debt, which is a voluntary act, and profitable to the creditors: nor by his taking out of briefs to serve; for one may alter his purpose, while it is not completed: nor by his assuming the titles of honour belonging to his ancestor, or exercising an honorary office hereditary in the family; for these are rights annexed to the blood, which may be used without proper representation. But the exercising an heritable office of profit, which may pass by voluntary conveyance, and consequently is adjudgeable, may reasonably be thought to infer a passive title. Lastly, as passive titles have been introduced, merely for the security of creditors; therefore, where questions concerning behaviour arise among the different orders of heirs, they are liable to one another no farther than *in valorem* of their several intromissions.

receptio hereditatis.  
 33. Another passive title in heritage, may be incurred by the apparent heir's accepting a gratuitous right from the ancestor, to any part of the estate to which he himself might have succeeded as heir; and it is called *receptio hereditatis*, because it is a taking of the succession by the heir before it opens to him by the death of his ancestor. If the right be onerous, there is no passive title; if the consideration paid for it does not amount to its full value, the creditors of the deceased may reduce it, in so far as it is gratuitous, but still it infers no passive title.

34. The heir incurring this passive title is no farther liable, than if he had at the time of his acceptance entered heir to the granter, and so subjected himself to the debts that were then chargeable against him; but with the posterior debts he has nothing to do, not even with those contracted between the date of the right and the infestment taken upon it, and he is therefore called *successor titulo lucrativo post contractum debitum*.

35. Neither of these passive titles takes place, unless the subject intermeddled with or disposed be such as the intromitter or receiver would succeed to as heir. In this also, these two passive titles agree, that the intromission in both must be after the death of the ancestor; for there can be no *termini habiles* of a passive title, while the ancestor is alive. But in the following respect they differ: *Gestio pro herede*, being a vicious passive title founded upon a quasi delict, cannot be objected against the delinquent's heir, if process has not been litifcontested while the delinquent himself was alive; whereas the *successor titulo lucrativo* is by the acceptance of the disposition understood to have entered into a tacit contract with the granter's creditors, by which he undertakes the burden of their debts; and all actions founded on contract are transmissible against heirs.

36. An apparent heir, who is cited by the ancestor's creditor in a process for payment, if he offers any peremptory defence against the debt, incurs a passive title; for he can have no interest to object against it, but in the character of heir. In the same manner, the heir's not renouncing upon a charge to enter heir, infers it: But the effect of both these is limited to the special debt pursued for, or charged upon. This passive title, which is inferred from the heir's not renouncing, has no effect till decree pass against him; and even a renunciation offered after decree, if the decree be in absence, will intitle the heir to a suspension of all diligence against his person and estate, competent upon his ancestor's debts.

37. By the principles of the feudal law, an heir, when he is to complete his titles by special service, must necessarily pass over his immediate ancestor, *e. g.* his father, if he was not infest; and serve heir to that ancestor who was last veit and seised in the right, and in whose *hereditas jacens* the right must remain, till a title be connected thereto from him. As this bore hard upon creditors who might think themselves secure in contracting with a person whom they saw for some time in the possession of an estate, and from thence concluded that it was legally veit in him; it is therefore provided by act 1695, that every person, passing over his immediate ancestor who had been three years in possession, and serving heir to one more remote, shall be liable for the debts and deeds of the person interjected, to the value of the estate to which he is served. This being correctory of the feudal maxims, has been strictly interpreted, so as not to extend to the gratuitous deeds of the person interjected, nor to the case where the interjected person was a naked fiar, and possessed only civilly through the liferenter.

38. Our law, from its jealousy of the weakness of mankind while under sickness, and of the importunity of friends on that occasion, has declared that all deeds affecting heritage, if they be granted by a person on deathbed, (*i. e.* after contracting that sickness which ends in death), to the damage of the heir, are ineffectual, except where the debts of the granter have laid him under a necessity to alien his lands. As this law of deathbed is founded solely in the privilege of the heir, deathbed-deeds, when consented to by the heir, are not reducible. The term properly opposed to deathbed is *liege possitio*, by which is understood a state of health; and it gets the name, because persons in health have the *legitima potestas*, or lawful power, of disposing of their property at pleasure.

39. The two extremes being proved, of the granter's sickness immediately before signing, and of his death following it, though at the greatest distance of time, did, by our former law, found a presumption that the deed was granted on deathbed, which could not have been elided but by a positive proof of the granter's convalescence; but now the allegation of deathbed is also excluded, by his having lived 60 days after signing the deed. The legal evidence of convalescence is the granter's having been, after the date of the deed, at kirk OR market unsupported; for a proof of either will secure the deed from challenge. The going to kirk or market must be performed when the people are met together in the church or churchyard for any public meeting, civil or ecclesiastical, or in the mar-

Law of Scotland.  
 Other passive titles.

Reduction by the heir *ex capite legit.*

What constitutes a deathbed deed.

Law of  
Scotland.

ket-place at the time of public market. No other proof of convalescence is receivable, because at kirk and market there are always present unsuspected witnesses, which we can hardly be sure of in any other case.

To what  
heirs this  
reduction is  
competent.

40. The privilege of setting aside deeds *ex capite heredi*, is competent to all heirs, not to heirs of line only, but of conquest, tailzie, or provision; not only to the immediate, but to remoter heirs, as soon as the succession opens to them. But, where it is consented to or ratified by the immediate heir, it is secured against all challenge, even from the remoter. Yet the immediate heir cannot, by any antecedent writing, renounce his right of reduction, and thereby give strength to deeds that may be afterwards granted *in lecto* to his hurt; for no private renunciation can authorise a person to act contrary to a public law; and such renunciation is presumed to be extorted through the fear of exheredation. If the heir should not use this privilege of reduction, his creditor may, by adjudication, transfer it to himself; or he may, without adjudication, reduce the deed, libelling upon his interest as creditor to the heir: But the granter's creditors have no right to this privilege, in regard that the law of deathbed was introduced, not in behalf of the granter himself, but of his heir.

What  
rights may  
be thus set  
aside.

41. The law of deathbed strikes against dispositions of every subject to which the heir would have succeeded, or from which he would have had any benefit, had it not been so disposed. Deathbed-deeds granted in consequence of a full or proper obligation in *liege pouffie*, are not subject to reduction; but, where the antecedent obligation is merely natural, they are reducible. By stronger reason, the deceased cannot, by a deed merely voluntary, alter the nature of his estate on deathbed to the prejudice of his heir, so as from heritable to make it moveable; but if he should, in *liege pouffie*, exclude his apparent heir, by an irrevocable deed containing reserved faculties, the heir cannot be heard to quarrel the exercise of these faculties on deathbed.

42. In a competition between the creditors of the deceased and of the heir, our law (act 1661) has justly preferred the creditors of the deceased, as every man's estate ought to be liable, in the first place, for his own debt. But this preference is, by the statute, limited to the case where the creditors of the deceased have used diligence against their debtor's estate, within three years from his death; and therefore the heir's creditors may, after that period, affect it for their own payment. All dispositions by an heir, of the ancestor's estate, within a year after his death, are null, in so far as they are hurtful to the creditors of the ancestor. This takes place, though these creditors should have used no diligence, and even where the dispositions are granted after the year: It is thought they are ineffectual against the creditors of the deceased who have used diligence within the three years.

clxxxii.

### SECT. XXI. Of Succession in Moveables.

Moveable  
succession  
by law.

IN the succession of moveable rights, it is an universal rule, that the next in degree to the deceased (or next of kin) succeeds to the whole; and if there are two or more equally near, all of them succeed by equal parts, without that prerogative, which takes place in

heritage, of the eldest son over the younger, or of males over females. Neither does the right of representation (explained n° clxxx. 4.) obtain in the succession of moveables, except in the single case of a competition between the full blood and the half blood; for a niece by the full blood will be preferred before a brother by the half blood, though she is by one degree more remote from the deceased than her uncle. Where the estate of a person deceased consists partly of heritage, and partly of moveables, the heir in the heritage has no share of the moveables, if there are others as near in degree to the deceased as himself: But where the heir, in such case, finds it his interest to renounce his exclusive claim to the heritage, and betake himself to his right as one of the next of kin, he may collate or communicate the heritage with the others, who in their turn must collate the moveables with him; so that the whole is thrown into one mass, and divided equally among all of them. This doctrine holds, not only in the line of descendants, but of collaterals; for it was introduced, that the heir might in no case be worse than the other next of kin.

2. One may settle his moveable estate upon whom he pleases, excluding the legal successor, by a testament; which is a written declaration of what a person wills to be done with his moveable estate after his death. No testamentary deed is effectual till the death of the testator; who may therefore revoke it at pleasure, or make a new one, by which the first loses its force, according to the rule, *voluntas testatoris est ambulatoria usque ad mortem*; and hence testaments are called *last* or *laster wills*. Testaments, in their strict acceptation, must contain a nomination of executors, *i. e.* of persons appointed to administer the succession according to the will of the deceased: Yet nothing hinders one from making a settlement of moveables, in favour of an universal legatee, though he should not have appointed executors; and on the other part, a testament where executors are appointed is valid, though the person who is to have the right of succession should not be named. In this last case, if the executor nominated be a stranger, *i. e.* one who has no legal interest in the moveable estate, he is merely a trustee, accountable to the next of kin; but he may retain a third of the dead's part (explained par. 6.) for his trouble in executing the testament; in payment of which, legacies, if any be left to him, must be imputed. The heir, if he be named executor, has right to the third as a stranger; but if one be named who has an interest in the legal succession, he has no allowance, unless such interest be less than a third. Nuncupative or verbal testaments are not, by the law of Scotland, effectual for supporting the nomination of an executor, let the subject of the succession be ever so small: But verbal legacies, not exceeding L. 100 *Scots*, are sustained: and even where they are granted for more, they are ineffectual only as to the excess.

3. A legacy is a donation by the deceased, to be paid by the executor to the legatee. It may be granted either in the testament or in a separate writing. Legacies are not due till the granter's death; and consequently they can transmit no right to the executors of the legatee, in the event that the granter survives him. A case occurred some years ago, where a testator left a legacy payable when the legatee arrived at a certain age. The legatee survived the testator,

Law of Scotland.

Law of Scotland.

tor, but died before the legacy was payable. It was found, chiefly upon the authority of the Roman law, that the legacy vested in the legatee *a morte testatoris*, and upon his decease was due to the legatee's next of kin.

rules of society, since no legitime is truly due on a mother's death: yet it is in practice tripartite; two thirds remain with the surviving father, as if one third were due to him *proprio nomine*, and another as administrator of the legitime for his children; the remaining third, being the wife's share, goes to her children, whether of that or any former marriage; for they are all equally her next of kin.

What debts affecting the executory.

4. Legacies, where they are general, *i. e.* of a certain sum of money indefinitely, give the legatee no right in any one debt or subject; he can only intell in a personal action against the executor, for payment out of the testator's effects. A special legacy, *i. e.* of a particular debt due to the deceased, or of a particular subject belonging to him, is of the nature of an assignation, by which the property of the special debt or subject vests, upon the testator's death, in the legatee, who can therefore directly sue the debtor or possessor: Yet as no legacy can be claimed till the debts are paid, the executor must be cited in such process, that it may be known, whether there are free effects sufficient for answering the legacy. Where there is not enough for payment of all the legacies, each of the general legatees must suffer a proportional abatement: But a special legatee gets his legacy entire, though there should be nothing over for payment of the rest; and, on the contrary, he has no claim, if the debt or subject bequeathed should perish, whatever the extent of the free executory may be.

7. Before a testament can be divided, the debts owing by the deceased are to be deducted; for all executory must be free. As the husband has the full power of burdening the goods in communion, his debts affect the whole, and so lessen the legitime and the share of the relict, as well as the dead's part. His funeral charges, and the mournings and alimony due to the widow, are considered as his proper debts; but the legacies, or other gratuitous rights granted by him on death-bed, affect only the dead's part. Bonds bearing interest, due by the deceased, cannot diminish the relict's share, because such bonds, when due to the deceased, do not increase it. The funeral charges of the wife predeceasing, fall wholly on her executors who have right to her share. Where the deceased leaves no family, neither husband, wife, nor child, the testament suffers no division, but all is the dead's part.

who can be, and under what restrictions.

5. Minors, after puberty, can test without their curators, wives without their husbands, and persons interdicted without their interdictors: but bastards cannot test, except in the cases afterwards set forth, N<sup>o</sup> clxxii. 3. As a certain share of the goods, falling under the communion that is consequent on marriage, belongs, upon the husband's decease, to his widow, *jure relicte*, and a certain share to the children, called the legitime, *portion natural*, or *hairns part of gear*; one who has a wife or children, though he be the absolute administrator of all these goods during his life, and consequently may alien them by a deed *inter vivos*, in *lege possitie*, even gratuitously, if no fraudulent intention to disappoint the wife or children shall appear, yet cannot impair their shares gratuitously on death-bed; nor can he dispose of his moveables to their prejudice by testament, though it should be made in *lege possitie*; since testaments do not operate till the death of the testator, at which period the division of the goods in communion have their full effect in favour of the widow and children.

8. The whole issue of the husband, not only by that marriage which was dissolved by his death, but by any former marriage, has an equal interest in the legitime; otherwise the children of the first marriage would be cut out, as they could not claim the legitime during their father's life. But no legitime is due, (1.) Upon the death of a mother. (2.) Neither is it due to grandchildren, upon the death of a grandfather. Nor, (3.) To children forisfamiliated, *i. e.* to such as, by having renounced the legitime, are no longer considered as *in familia*, and so are excluded from any farther share of the moveable estate than they have already received.

Renunciation of legitime.

9. As the right of legitime is strongly founded in nature, the renunciation of it is not to be inferred from implication. Renunciation by a child of his claim of legitime has the same effect as his death, in favour of the other children intitled thereto; and consequently the share of the renouncer divides among the rest; but he does not thereby lose his right to the dead's part, if he does not also renounce his share in the father's executory. Nay, his renunciation of the legitime, where he is the only younger child, has the effect to convert the whole subject thereof into dead's part, which will therefore fall to the renouncer himself as next of kin, if the heir be not willing to collate the heritage with him. Yet it has been found that the renunciation of the only younger child made the whole legitime accrue to the heir without collation.

division of testament.

6. If a person deceased leaves a widow, but no child, his testament, or, in other words, the goods in communion, divide in two: one half goes to the widow; the other is the dead's part, *i. e.* the absolute property of the deceased, on which he can test, and which falls to his next of kin, if he dies intestate. Where he leaves children, one or more, but no widow, the children get one half as their legitime: the other half is the dead's part; which falls also to the children, if the father has not testet upon it. If he leaves both widow and children, the division is tripartite: the wife takes one third by herself; another falls, as legitime, to the children equally among them, or even to an only child, though he should succeed to the heritage; the remaining third is the dead's part. Where the wife predeceases without children, one half is retained by the husband, the other falls to her next of kin: Where she leaves children, the division ought also to be bipartite, by the common

10. For preserving an equality among all the children who continue intitled to the legitime, we have adopted the Roman doctrine of *collatio bonorum*; where, by the child, who has got a provision from his father, is obliged to collate it with the others, and impute it towards his own share of the legitime; but if from the deed of provision, the father shall appear to have intended it as a *precipuum* to the child, collation is excluded. A child is not bound to collate an heritable subject provided to him, because the legitime is not impaired by such provision. As this collation takes place only in questions among children who are intitled to

Collation among younger children.

Law of  
Scotland.

the legitime, the relict is not bound to collate donations given her by her husband, in order to increase the legitime; and on the other part, the children are not obliged to collate their provisions, in order to increase her share.

Confirma-  
tion.

11. As an heir in heritage must complete his titles by entry, so an executor is not veiled in the right of the moveable estate of the deceased without confirmation. Confirmation is a sentence of the commissary or bishop's court, empowering an executor, one or more, upon making inventory of the moveables pertaining to the deceased, to recover, possess, and administer them, either in behalf of themselves, or of others interested therein. Testaments must be confirmed in the commissariat where the deceased had his principal dwelling house at his death. If he had no fixed residence, or died in a foreign country, the confirmation must be at *Edinburgh*, as the *commune forum*; but if he went abroad with an intention to return, the commissariat within which he resided, before he left Scotland, is the only proper court.

12. Confirmation proceeds upon an edict, which is affixed on the door of the parish-church where the deceased dwelt, and serves to intimate to all concerned the day of confirmation, which must be nine days at least after publishing the edict. In a competition for the office of executor, the commissary prefers, *primo loco*, the person named to it by the deceased himself, whose nomination he ratifies or confirms, without any previous decerniture: this is called the confirmation of a testament-testamentary. In default of an executor named by the deceased, universal disponees are by the present practice preferred; after them, the next of kin; then the relict; then creditors; and, lastly, special legatees. All these must be decerned executors, by a sentence called a *decree-dative*; and if afterwards they incline to confirm, the commissary authorises them to administer, upon their making inventory, and giving security to make the subject thereof forthcoming to all having interest; which is called the confirmation of a testament-dative.

Confirma-  
tion *qua* ex-  
ecutor-cre-  
ditor.

13. A creditor, whose debtor's testament is already confirmed, may sue the executor, who holds the office for all concerned, to make payment of his debt. Where there is no confirmation, he himself may apply for the office, and confirm as executor-creditor; which intitles him to sue for and receive the subject confirmed, for his own payment: and where one applies for a confirmation as executor-creditor, every co-creditor may apply to be conjoined with him in the office. As this kind of confirmation is simply a form of diligence, creditors are exempted from the necessity of confirming more than the amount of their debts.

14. A creditor, whose debt has not been constituted or his claim not closed by decree, during the life of his debtor, has no title to demand directly the office of executor *qua* creditor: but he may charge the next of kin who stands off, to confirm, who must either renounce within twenty days after the charge, or be liable for the debt; and if the next of kin renounces, the pursuer may constitute his debt, and obtain a decree *cognitionis causa*, against the *hereditas jacens* of the moveables, upon which he may confirm as executor-creditor to the deceased. Where one is creditor, not to the deceased, but to his next of kin who stands off from

confirming, he may affect the moveables of the deceased, by obtaining himself decerned executor-dative to the deceased, as if he were creditor to him, and not to his next of kin.

15. Where an executor has either omitted to give up any of the effects belonging to the deceased in inventory, or has estimated them below their just value, there is place for a new confirmation, *ad omisiss, vel male appretiatas*, at the suit of any having interest; and if it appears that he has not omitted or undervalued any subject *doless*, the commissary will ordain the subjects omitted, or the difference between the estimations in the principal testament and the true values, to be added thereto; but if *dole* shall be presumed, the whole subject of the testament *ad omisiss vel male appretiatas*, will be carried to him who confirms it, to the exclusion of the executor in the principal testament.

16. The legitime and relict's share, because they are rights arising *ex lege*, operate *ipso jure*, upon the father's death, in favour of the relict and children; and consequently pass from them, though they should die before confirmation, to their next of kin: whereas the dead's part, which falls to the children or other next of kin in the way of succession, remains, if they should die before confirming, *in bonis* of the first deceased; and so does not descend to their next of kin, but may be confirmed by the person who, at the time of confirmation, is the next of kin to the first deceased. Special assignations, though neither intimated nor made public during the life of the granter, carry to the assignee the full right of the subjects assigned, without confirmation. Special legacies are really assignations, and so fall under this rule. The next of kin, by the bare possession of the *ipsa corpora* of moveables, acquires the property thereof without confirmation, and transmits it to his executors.

17. The confirmation of any one subject by the next of kin, as it proves his right of blood, has been adjudged to carry the whole executry out of the testament of the deceased, even what was omitted, and to transmit all to his own executors. The confirmation of a stranger, who is executor nominated, as it is merely a trust for the next of kin, has the effect to establish the right of the next of kin to the subjects confirmed, in the same manner as if himself had confirmed them.

18. Executry, though it carries a certain degree of representation of the deceased, is properly an office: executors therefore are not subjected to the debts due by the deceased, beyond the value of the inventory; but, at the same time, they are liable in diligence for making the inventory effectual to all having interest. An executor-creditor who confirms more than his debt amounts to, is liable in diligence for what he confirms. Executors are not liable in interest, even upon such bonds recovered by them as carried interest to the deceased, because their office obliges them to retain the sums they have made effectual, in order to a distribution thereof among all having interest. This holds though they should again lend out the money upon interest, as they do it at their own risk.

19. There are certain debts of the deceased called privileged debts, which were always preferable to every other. Under that name are comprehended, medicines furnished to the deceased on deathbed, physicians fees

during that period, funeral charges, and the rent of his house, and his servants wages for the year or term current at his death. These the executors are in safety to pay on demand. All the other creditors, who either obtain themselves confirmed, or who cite the executor already confirmed, within six months after their debtor's death, are preferred, *pari passu*, with those who have done more timely diligence; and therefore no executor can either retain for his own debt, or pay a testamentary debt, so as to exclude any creditor, who shall use diligence within the six months, from the benefit of the *pari passu* preference; neither can a decree for payment of debt be obtained, in that period, against an executor, because, till that term be elapsed, it cannot be known how many creditors may be intitled to the fund in his hands. If no diligence be used within the six months, the executor may retain for his own debt, and pay the residue *primo venienti*. Such creditors of the deceased as have used diligence within a year after their debtor's death, are preferable on the subject of his testament to the creditors of his next of kin.

one in-  
trission.

20. The only passive title in moveables is vitious intromission; which may be defined, an unwarrantable intermeddling with the moveable estate of a person deceased, without the order of law. This is not confined, as the passive titles in heritage are, to the persons interested in the succession, but strikes again't all intromitters whatever. Where an executor confirmed intromits with more than he has confirmed, he incurs a passive title; fraud being in the common case presumed from his not giving up in inventory the full subject intermeddled with. Vitious intromission is also presumed, where the repositories of a dying person are not sealed up, as soon as he becomes incapable of sense, by his nearest relations; or, if he dies in a house not his own, they must be sealed by the master of such house, and the keys delivered to the judge-ordinary, to be kept by him, for the benefit of all having interest.

21. The passive title of vitious intromission does not take place where there is any probable title or circumstance that takes off the presumption of fraud. In consequence of this rule, necessary intromission, or *custodia causa*, by the wife or children, who only continue the possession of the deceased, in order to preserve his goods for the benefit of all concerned, infers no passive title. And, upon the same principle, an intromitter, by confirming himself executor, and thereby subjecting himself to account, before action be brought against him on the passive titles, purges the vitiosity of his prior intromission: and where the intromitter is one who is interested in the succession, e. g. next of kin, his confirmation, at any time within a year from the death of the deceased, will exclude the passive title, notwithstanding a prior citation. As this passive title was intended only for the security of creditors, it cannot be sued upon by legatees; and since it arises *ex delicto*, it cannot be pleaded against the heir of the intromitter. As in delicts, any one of many delinquents may be subjected to the whole punishment, so any one of many intromitters may be sued *in solidum* for the pursuer's debt, without calling the rest; but the intromitter who pays, has an action of relief against the others for their share of it. If the intromitters are sued jointly, they

are liable, not *pro rata* of their several intromissions, but *pro virili*.

Law of  
Scotland.

28. The whole of a debtor's estate is subjected to the payment of his debts; and therefore, both his heirs and executors are liable for them, in a question with creditors: but as succession is by law divided into the heritable and the moveable estate, each of these ought, in a question between the several successors, to bear the burdens which naturally affect it. Action of relief is accordingly competent to the heir who has paid a moveable debt, against the executor; and *vice versa*. This relief is not cut off by the deceased's having disposed either his land-estate or his moveables, with the burden of his *whole* debts; for such burden is not to be construed as an alteration of the legal succession, but merely as a farther security to creditors, unless the contrary shall be presumed from the special style of the disposition.

Mutual re-  
lief betwixt  
the heir and  
executor.

IV. OF LAST HEIRS AND BASTARDS.

clxxxix

By our ancient practice, feudal grants taken to the vassal, and to a special order of heirs, without settling the last termination upon *heirs whatsoever*, returned to the superior, upon failure of the special heirs therein contained: but now that feus are become patrimonial rights, the superior is, by the general opinion, held to be fully divested by such grant, and the right descends to the vassal's heirs at law. And even where a vassal dies without leaving any heir who can prove the remotest propinquity to him, it is not the superior, as the old law stood, but the king, who succeeds as last heir, both in the heritable and moveable estate of the deceased, in consequence of the rule, *Quod nullius est, cedit domino Regi*.

Where  
there is no  
heir, the  
king suc-  
ceeds.

2. If the lands, to which the king succeeds, be holden immediately of himself, the property is consolidated with the superiority, as if resignation had been made in the sovereign's hands. If they are holden of a subject, the king, who cannot be vassal to his own subject, names a donatory; who, to complete his title, must obtain a decree of declarator; and thereafter he is presented to the superior, by letters of presentation from the king under the quarter-seal, in which the superior is charged to enter the donatory. The whole estate of the deceased is, in this case, subjected to his debts, and to the widow's legal provisions. Neither the king nor his donatory is liable beyond the value of the succession. A person who has no heir to succeed to him, cannot alien his heritage *in leas*, to the prejudice of the king, who is intitled to set aside such deed, in the character of *ultimus heres*.

3. A bastard can have no legal heirs, except those of his own body; since there is no succession but by the father, and a bastard has no certain father. The king therefore succeeds to him, failing his lawful issue, as last heir. Though the bastard, as absolute proprietor of his own estate, can dispose of his heritage in *lige possie*, and of his moveables by any deed *inter vivos*; yet he is disabled, *ex defectu natalium*, from bequeathing by testament, without letters of legitimation from the sovereign. If the bastard has lawful children, he may test without such letters, and name tutors and curators to his issue. Letters of legitimation, let their clauses be ever so strong, cannot enable the

to the bas-  
tard.

Law of Scotland. Bastards incapable of legal, but not of defined, succession.

bastard to succeed to his natural father, to the exclusion of lawful heirs.

4. The legal rights of succession, being founded in marriage, can be claimed only by those who are born in lawful marriage: the issue therefore of an unlawful marriage are incapable of succession. A bastard is excluded, (1.) From his father's succession; because law knows no father who is not marked out by marriage. (2.) From all heritable succession, whether by the father or mother; because he cannot be pronounced lawful heir by the inquest, in terms of the brief. And, (3.) From the moveable succession of his mother; for though the mother be known, the bastard is not her lawful child, and legitimacy is implied in all succession conferred by law. A bastard, though he cannot succeed *jure sanguinis*, may succeed by destination, where he is specially called to the succession by an entail or testament.

Aliens cannot succeed in feudal rights; nor Papists.

5. Certain persons, though born in lawful marriage, are incapable of succession. Aliens are, from their allegiance to a foreign prince, incapable of succeeding in *feudal rights*, without naturalization. Children born in a foreign state, whose fathers were natural born subjects, and not attained, are held to be natural born subjects. Persons educated in, or professing, the Popish religion, if they shall neglect, upon their attaining the age of 15, to renounce its doctrines by a formal declaration, cannot succeed in *heritage*; but must give place to the next Protestant heir, who will hold the estate irredeemably, if the Popish heir does not, within ten years after incurring the irritancy, sign the *formula* prescribed by the statute 1700, c. 3.

Actions of reduction improbation. (3.) Actions of simple reduction. Proper improbations, which are brought for declaring writings false or forged, are noticed below, N<sup>o</sup> clxxxvi. 32. Reduction-improbation is an action, whereby a person who may be hurt or affected by a writing, insists for producing or exhibiting it in court, in order to have it set aside, or its effect ascertained, under the certification that the writing, if not produced, shall be declared false and forged. This certification is a fiction of law, introduced that the production of writings may be the more effectually forced, and therefore it operates only in favour of the pursuer. Because the summons in this action proceeds on alleged grounds of falsehood, his majesty's advocate, who is the public prosecutor of crimes, must concur in it.

Law of Scotland. Reduction improbation.

4. As the certification in this process draws after it so heavy consequences, two terms are assigned to the defenders for production. After the second term is elapsed, intimation must be made judicially to the defender, to satisfy the production within ten days; and till these are expired, no certification can be pronounced. Certification cannot pass against deeds recorded in the books of session, if the defender shall, before the second term, offer a condescendence of the dates of their registration, unless falsehood be objected: in which case, the original must be brought from the record to the court. But an extract from the inferior court is no bar to certification; the principal writing must be laid before the court of session on a *perpetuo warrant*.

5. In an action of simple reduction the certification is only temporary, declaring the writings called for null, until they be produced; so that they recover their full force after production, even against the pursuer himself; for which reason, that process is now seldom used. Because its certification is not so severe as in reduction-improbation, there is but one term assigned to the defender for producing the deeds called for.

C H A P. III. Of ACTIONS.

HITHERTO of *Persons* and *Rights*, the two first objects of law: *Actions* are its third object, whereby persons make their rights effectual.

SECT. I. Nature, division, &c. of actions.

An action, what. Division of actions.

AN action may be defined, A demand regularly made and insisted in, before the judge competent, for the attaining or recovering of a right; and it suffers several divisions, according to the different natures of the rights pursued upon.

2. Actions are either real or personal. A real action is that which arises from a right in the thing itself, and which therefore may be directed against all possessors of that thing: thus, an action for the recovery, even of a moveable subject, when founded on a *jus in re*, is in the proper acceptation real; but real actions are, in vulgar speech, confined to such as are directed against heritable subjects. A personal action is founded only on an obligation undertaken for the performance of some fact, or the delivery of some subject; and therefore can be carried on against no other than the person obliged, or his heirs.

3. Actions, again, are either ordinary or rescissory. All actions are, in the sense of this division, ordinary, which are not rescissory. Rescissory actions are divided, (1.) Into actions of proper improbation. (2.)

6. The most usual grounds of reduction of writings are, the want of the requisite solemnities; that the granter was minor, or interdicted, or inhibited; or that he signed the deed on death-bed, or was compelled or frightened into it, or was circumvented; or that he granted it in prejudice of his lawful creditors.

7. In reductions on the head of force, or fear, or fraud and circumvention, the pursuer must libel the particular circumstances from which his allegation is to be proved. Reduction is not competent upon every degree of force or fear; it must be such as would shake a man of constancy and resolution. Neither is it competent, on that fear which arises from the just authority of husbands or parents over their wives or children, nor upon the fear arising from the regular execution of lawful diligence by caption, provided the deeds granted under that fear relate to the ground of debt contained in the diligence; but if they have no relation to that debt, they are reducible *ex metu*.

8. Alienations granted by debtors after contracting of lawful debts, in favour of conjunct or confident persons, without just and necessary causes, and without a just price really paid, are, by the act 1621, declared to be null. One is deemed a prior creditor, whose ground of debt existed before the right granted

Ground reduction.

by

by the debtor; though the written voucher of the debt should bear a date posterior to it. Persons are accounted conjunct, whose relation to the granter is so near, as to bar them from judging in his cause. Confident persons are those who appear to be in the granter's confidence, by being employed in his affairs, or about his person; as a doer, steward, or domestic servant.

9. Rights, though gratuitous, are not reducible, if the granter had, at the date thereof, a sufficient fund for the payment of his creditors. Provisions to children are, in the judgment of law, gratuitous; so that their effect, in a question with creditors, depends on the solvency of the granter: but settlements to wives, either in marriage-contracts, or even after marriage, are onerous, in so far as they are rational; and consequently are not reducible, even though the granter was insolvent. This rule holds also in rational tochers contracted to husbands: But it must, in all cases, be qualified with this limitation, *if the insolvency of the granter was not publicly known*; for if it was, fraud is presumed in the receiver of the right, by contracting with the bankrupt.

10. The receiver of the deed, if he be a conjunct or confident person, must instruct or support the onerous cause of his right, not merely by his own oath, but by some circumstances or adminicles. But where a right is granted to a stranger, the narrative of it expressing an onerous cause, is sufficient *per se* to secure it against reduction.

11. All voluntary payments or rights made by a bankrupt to one creditor, to disappoint the more timeous diligence of another, are reducible at the instance of that creditor who has used the prior diligence. A creditor, though his diligence be but begun by citation, may insist in a reduction of all posterior voluntary rights granted to his prejudice; but the creditor who neglects to complete his begun diligence within a reasonable time, is not intitled to reduce any right granted by the debtor, after the time that the diligence is considered as abandoned.

12. A prohibited alienation, when conveyed by the receiver to another who is not privy to the fraud, subsists in the person of the *bona fide* purchaser. In the case of moveable rights, this nullity is receivable by exception; but it must be declared by reduction, where the right is heritable.

13. By act 1696, c. 5. all alienations by a bankrupt, within 60 days before his bankruptcy, to one creditor in preference to another, are reducible, at the instance even of such co-creditors as had not used the least step of diligence. A bankrupt is there described by the following characters; diligence used against him by horning and caption; and insolvency, joined either with imprisonment, retiring to the sanctuary, absconding, or forcibly defending himself from diligence. It is sufficient that a caption is raised against the debtor, though it be not executed, provided he has retired to shun it. And by the late bankrupt statute 23d Geo. III. it is declared, that in all actions and questions arising upon the construction and effect of the act 1696; when a debtor is out of Scotland, or not liable to be imprisoned by reason of privilege or personal protection, a charge of horning executed against him, together with either an arrest-

ment of any of his personal effects not looked or discharged within fifteen days, or a pointing executed of any of his moveables, or a decree of adjudication of any part of his heritable estate, or sequestration by the act of a proper court, of all or any part of his estate or effects, heritable or moveable, for payment of debt, shall, when joined with insolvency, be held as sufficient proof of notour bankruptcy; and from and after the last step of such diligence, the said debtor, if insolvent, shall be held bankrupt. It is provided (by said act 1696), that all heritable bonds or rights on which seisin may follow, shall be reckoned, in a question with the granter's other creditors upon this act, to be of the date of the seisin following thereon. But this act was found to relate only to securities for former debts, and not to *nova debita*.

14. Actions are divided into *rei persecutorie*, and *penales*. By the first, the pursuer insists barely to recover the subject that is his, or the debt due to him: and this includes the damage sustained; for one is as truly a sufferer in his patrimonial interest by that damage, as by the loss of the subject itself. In penal actions, which always arise *ex delicto*, something is also demanded by way of penalty.

15. Actions of spuilzie, ejection, and intrusion, are penal. An action of spuilzie is competent to one dispossessed of a moveable subject violently, or without order of law, against the person dispossessing: not only for being restored to the possession of the subject, if extant, or for the value, if it be destroyed, but also for the violent profits, in case the action be brought within three years from the spoliation. Ejection and intrusion are, in heritable subjects, what spuilzie is in moveables. The difference between the two suits is, that in ejection, violence is used; whereas the intruder enters into the void possession, without either a title from the proprietor, or the warrant of a judge. The actions arising from all the three are of the same general nature.

16. The action of contravention of law-borrows is also penal. It proceeds on letters of law-borrows, (from *borgh*, a cautioner), which contain a warrant to charge the party complained upon, that he may give security not to hurt the complainer in his person, family, or estate. These letters do not require the previous citation of the party complained upon, because the caution which the law requires is only for doing what is every man's duty; but, before the letters are executed against him, the complainer must make oath that he dreads bodily harm from him. The penalty of contravention is ascertained to a special sum, according to the offender's quality; the half to be applied to the lisk, and the half to the complainer. Contravention is not incurred by the uttering of reproachful words, where they are not accompanied, either with acts of violence, or at least a real injury; and as the action is penal, it is elided by any probable ground of excuse.

17. Penalties are the consequences of delict, or transgression; and as no heir ought to be accountable for the delict of his ancestor, farther than the injured person has really suffered by it, penal actions die with the delinquent, and are not transmissible against his heirs. Yet the action, if it has been commenced and litigated in the delinquent's lifetime, may be continued

Actions either *rei persecutorie*, or *penales*.

Spuilzie.

Law of  
Scotland.

nued against the heir, though the delinquent should die during the dependance. Some actions are *rei persecutorie* on the part of the pursuer, when he insists for simple restitution; which yet may be penal in respect of the defender; e. g. the action on the passive title of vitious intromission, by which the pursuer frequently recovers the debt due to him by the deceased, tho' it should exceed the value of the goods intermeddled with by the defenders.

Actions pe-  
titory,

18. The most celebrated division of actions in our law is into *petitory*, *possessory*, and *declaratory*. *Petitory* actions are those, where something is demanded from the defender, in consequence of a right of property, or of credit in the pursuer: Thus, actions for restitution of moveables, actions of poinding, of forthcoming, and indeed all personal actions upon contracts or quasi-contracts, are petitory. *Possessory* actions are those which are founded, either upon possession alone, as spuilzies; or upon possession joined with another title, as removings; and they are competent either for getting into possession, for holding it, or for recovering it; analogous to the interdicts of the Roman law, *quorum bonorum, uti possidetis, and unde vi*.

Of molesta-  
tion.

16. An action of molestation is a possessory action, competent to the proprietor of a land-estate, against those who disturb his possession. It is chiefly used in questions of commonry, or of controverted marches. Where a declarator of property is conjoined with a process of molestation, the session alone is competent to the action. Actions on briefs of perambulation, have the same tendency with molestations, viz. the settling of marches between conteminous lands.

Of mails  
and duties.

20. The actions of mails and duties is sometimes petitory, and sometimes possessory. In either case, it is directed against the tenants and natural possessors of land-estates, for payment to the pursuer of the rents remaining due by them for past crops, and of the full rent for the future. It is competent, not only to a proprietor whose right is perfected by feisin, but to a simple disponee, for a disposition of lands includes a right to the mails and duties; and consequently to an adjudger, for an adjudication is a judicial disposition.

Petitory.

In the petitory action, the pursuer, since he founds upon right, not possession, must make the proprietor, from whom the tenants derive their right, party to the suit; and he must support his claim by titles of property or diligences, preferable to those in the person of his competitor. In the possessory, the pursuer who libels that he, his ancestors, or authors, have been seven years in possession, and that therefore he has the benefit of a possessory judgment, need produce no other title than a feisin, which is a title sufficient to make the possession of heritage lawful; and it is enough, if he calls the natural possessors, though he should neglect the proprietor. A possessory judgment founded on seven years possession, in consequence either of a feisin or a tack, has this effect, that though one should claim under a title preferable to that of the possessor, he cannot compete with him in the possession, till in a formal process of reduction he shall obtain the possessor's title declared void.

Possessory  
judgment.

21. A *declaratory* action is that, in which some right is craved to be declared in favour of the pursuer, but nothing sought to be paid or performed by the defender, such as declarators of marriage, of irritancy, of

Declara-  
tory action.

21. A *declaratory* action is that, in which some right is craved to be declared in favour of the pursuer, but nothing sought to be paid or performed by the defender, such as declarators of marriage, of irritancy, of

N<sup>o</sup> 178.

expiry of the legal reversion, &c. Under this class may be also comprehended rescissory actions, which, without any personal conclusion against the defender, tend simply to set aside the rights or writings libelled, in consequence of which a contrary right or immunity arises to the pursuer. Decrees upon actions that are properly declaratory confer no new right; they only declare what was the pursuer's right before, and so have a retrospect to the period at which that right first commenced. Declarators, because they have no personal conclusion against the defender, may be pursued against an apparent heir without a previous charge given him to enter to his ancestor; unless where special circumstances require a charge.

22. An action for proving the tenor, whereby a writing, which is destroyed or amissing, is endeavoured to be revived, is in effect declaratory. In obligations that are extinguishable barely by the debtor's retiring or cancelling them, the pursuer, before a proof of the tenor is admitted, must condescend on such a *casus amissionis*, or accident by which the writing was destroyed, as shows it was lost when in the creditor's possession; otherwise bonds that have been cancelled by the debtor on payment, might be reared up as still subsisting against him: But in writings which require contrary deeds to extinguish their effect, as assignments, dispositions, charters, &c. it is sufficient to libel that they were lost, even *casu fortuito*.

23. Regularly, no deed can be revived by this action, without some adminicle in writing, referring to that which is libelled; for no written obligation ought to be raised up barely on the testimony of witnesses. If these adminicles afford sufficient conviction that the deed libelled did once exist, the tenor is admitted to be proved by witnesses, who must depose, either that they were present at signing the deed, or that they afterwards saw it duly subscribed. Where the relative writings contain all the substantial clauses of that which is lost, the tenor is sometimes sustained without witnesses. In a writing which is libelled to have contained uncommon clauses, all these must appear by the adminicles. Actions of proving the tenor are, on account of their importance, appropriated to the court of session; and, by the old form, the testimony of the witnesses could not be received but in presence of all the judges.

24. The action of double or multiple poinding may be also reckoned *declaratory*. It is competent to a debtor, who is distressed, or threatened with distress, by two or more persons claiming right to the debt, and who therefore brings the several claimants into the field, in order to debate and settle their several preferences, that so he may pay securely to him whose right shall be found preferable. This action is daily pursued by an arrestee, in the case of several arreftments used in his hands for the same debt; or by tenants in the case of several adjudgers, all of whom claim right to the same rents. In these competitions, any of the competitors may bring an action of multiple-poinding in name of the tenants, or other debtors, without their consent, or even though they should disclaim the process; since the law has introduced it as the proper remedy for getting such competitions determined: And while the subject in controversy continues *in medio*, any third person who conceives he has a right to it, may, though

Scotland.Law of  
Scotland.  
Summons.

though he should not be cited as a defender, produce his titles, as if he were an original party to the suit, and will be admitted for his interest in the competition. By the forefaid bankrupt statute, however, it is competent, in the case of a forthcoming or multiple-pounding raised on an arrestment used within thirty days prior, or four kalendar months subsequent to a bankruptcy, for any other creditor producing his interest, and making his claim, in the process at any time before the expiration of the four months, to be ranked in the same manner as if he had used the form of arrestment.

25. Certain actions may be called *accessory*, because they are merely preparatory or subservient to other actions. Thus, exhibitions *ad deliberandum*, at the instance of an heir against the creditors or custodiers of his ancestor's writings, are intended only to pave the way for future processes. An action of *transference* is also of this sort, whereby an action, during the pendency of which the defender happens to die, is craved to be transferred against his representative, in the same condition in which it stood formerly. Upon the pursuer's death his heir may insist in the cause against the defender, upon producing either a return or a confirmed testament, according as the subject is heritable or moveable. Transferences being but incidental to other actions, can be pronounced by that inferior judge alone before whom the principal cause depended; but where the representatives of the deceased live in another territory, it is the supreme court must transfer. Obligations may now be registered summarily after the creditor's death; which before was not admitted, without a separate process of registration, to which the granter was necessarily to be made a party.

26. A process of *wakening* is likewise accessory. An action is said to sleep, when it lies over not insisted in for a year, in which case its effect is suspended: but even then it may, at any time within the years of prescription, be revived or awakened by a summons, in which the pursuer recites the last step of the process, and concludes that it may be again carried on as if it had not been discontinued. An action that stands upon any of the inner-house rolls cannot sleep; nor an action in which decree is pronounced, because it has got its full completion: Consequently the decree may be extracted after the year, without the necessity of a waking.

27. An action of *transumpt* falls under the same class. It is competent to those who have a partial interest in writings that are not in their own custody, against the possessors thereof, for exhibiting them, that they may be transumed for their behoof. Tho' the ordinary title in this process be an obligation by the defender to grant transumps to the pursuer, it is sufficient if the pursuer can show that he has an interest in the writings; but in this case, he must transume them on his own charges. Actions of transumpt may be pursued before any judge-ordinary. After the writings to be transumed are exhibited, full duplicates are made out, collated, and signed, by one of the clerks of court, which are called *transumps*, and are as effectual as an extract from the register.

28. Actions proceeded anciently upon brieves issuing from the chancery, directed to the justiciary or judge-ordinary, who tried the matter by a jury, upon whose verdict judgment was pronounced: And to this

day we retain certain brieves, as of *inquest, terce, idiotry, tutory, perambulation*, and perhaps two or three others: But summonses were, immediately upon the institution of the college of justice, introduced in the place of brieves. A summons, when applied to actions pursued before the session, is a writ in the king's name, issuing from his signet upon the pursuer's complaint, authorising messengers to cite the defender to appear before the court and make his defences; with certification, if he fail to appear, that decree will be pronounced against him in terms of the certification of the summons.

29. The days indulged by law to a defender, between his citation and appearance, to prepare for his defence, are called *inducie legales*. If he is within the kingdom, 21 and 6 days, for the first and second diets of appearance, must be allowed him for that purpose; and if out of it, 60 and 15. Defenders residing in Orkney or Zetland must be cited on 40 days. In certain summonses which are privileged, the *inducie* are shortened: Spuilzies and ejections proceed on 15 days; wakings and transferences, being but incidental, on six; (see the list of privileged summonses, in act of sederunt June 29th 1672.) A summons must be executed, *i. e.* served against the defender, so as the last diet of appearance may be within a year after the date of the summons; and it must be called within a year after that diet, otherwise it falls for ever. Offence against the authority of the court, acts of malversation in office by any member of the college of justice, and acts of violence and oppression committed during the dependence of a suit by any of the parties, may be tried without a summons, by a summary complaint.

30. Though the Romans acknowledged a concurrence of actions in their proceedings, it is not known in the law of Scotland. Therefore, where an action is in part penal, *e. g.* a removing, spuilzie, &c. a pursuer who restricts his demand to, and obtains a decree merely for, restitution, cannot thereafter bring a new process for the violent profits. Yet the same fact may be the foundation both of a criminal and civil action, because these two are intended for different purposes; the one for satisfying the public justice, the other for indemnifying the private party: And though the defender should be absolved in the criminal trial, for want of evidence, the party injured may bring an action *ad civilem effectum*, in which he is intitled to refer the libel to the defender's oath.

31. One libel or summons may contain different conclusions on the same ground of right, rescissory, declaratory, petitory, &c. if they be not repugnant to each other: Nay, though different sums be due to one, upon distinct grounds of debt, or even by different debtors, the creditor may insist against them all in the same summons.

32. Defences are pleas offered by a defender for eluding an action. They are either *dilatory*, which do not enter into the cause itself, and so can only procure an absolvitor from the *lis pendens*: Or *peremptory*, which entirely cut off the pursuer's right of action. The first, because they relate to the forms of proceeding, must be offered *in limine judicii*, and all of them at once. But peremptory defences may be proposed at any time before sentence. By a late act of sederunt,

Law of  
Scotland.

however (1787), all defences, both dilatory and peremptory, so far as they are known, must be proponed at returning the summons, under a penalty; and the same enactment extends to the cases of suspensions and advocations. The writings to be founded upon by the parties also must be produced: the intention of the court, in framing the act of federunt, being to accelerate as much as possible the decision of causes.

Litifcontestation.

33. A cause, after the parties had litigated it before the judge, was said by the Romans to be litifcontested. By litifcontestation a judicial contract is understood to be entered into by the litigants, by which the action is perpetuated against heirs, even when it arises *ex delicto*. By our law, litifcontestation is not formed till an act is extracted, admitting the libel or defences to proof.

clxxxiv.

## SECT. II. Of Probation.

Probation,

ALL allegations by parties to a suit, must be supported by proper proof. Probation is either by writing, by the party's own oath, or by witnesses. In the case of allegations, which may be proved by either of the three ways, a proof is said to be admitted *prout de jure*; because, in such case, all the legal methods of probation are competent to the party; if the proof he brings by writing be lame, he may have recourse either to witnesses or to his adversary's oath; but, if he should first take himself to the proof by oath, he cannot thereafter use any other probation (for the reason assigned par. 3.); and, on the contrary, a pursuer who has brought a proof by witnesses, on an extracted act, is not allowed to recur to the oath of the defender. Single combat, as a sort of appeal to Providence, was, by our ancient law, admitted as evidence, in matters both civil and criminal. It was afterwards restricted to the case of such capital crimes where no other proof could be had; some traces of this blind method of trial remained even in the reign of James VI. who, by 1600, c. 12. might authorise duels on weighty occasions.

*prout de jure*;

by single  
combat;

by writing.

2. As obligations or deeds signed by the party himself, or his ancestors or authors, must be, of all evidence, the least liable to exception; therefore every debt or allegation may be proved by proper evidence in writing. The solemnities essential to probative deeds have been already explained, (n<sup>o</sup> clxxxiv. 3. *et seq.*) Books of account kept by merchants, tradesmen, and other dealers in business, though not subscribed, are probative against him who keeps them; and, in case of furnishings by a shop-keeper, such books, if they are regularly kept by him, supported by the testimony of a single witness, afford a *femiplena probatio* in his favour, which becomes full evidence by his own oath in supplement. Notarial instruments and executions by messengers bear full evidence, that the solemnities therein set forth were used, not to be invalidated otherwise than by a proof of falsehood; but they do not prove any other extrinsic facts therein averred, against third parties.

Probation  
oath of party  
in reference.

3. Regularly, no person's right can be proved by his own oath, nor taken away by that of his adversary; because these are the bare averments of parties in their own favour. But, where the matter in issue is referred by one of the parties to the oath of the other, such oath, though made in favour of the deponent himself, is decisive of the point; because the reference is a vir-

tual contract between the litigants, by which they are understood to put the issue of the cause upon what shall be depose: and this contract is so strictly regarded, that the party who refers to the oath of the other cannot afterwards, in a civil action, plead upon any deed against the party deposing, inconsistent with his oath. To obviate the snares that may be laid for perjury, he, to whose oath of verity a point is referred, may refuse to depose, till his adversary swear that he can bring no other evidence in proof of his allegation.

4. A defender, though he cannot be compelled to swear to facts in a libel properly criminal; yet may, in trespasses, where the conclusion is limited to a fine, or to damages. In general, an oath of party cannot either hurt or benefit third parties; being, as to them, *res inter alios acta*.

5. An oath upon reference is sometimes qualified by special limitations restricting it. The qualities which are admitted by the judge as part of the oath, are called *intrinsic*; those which the judge rejects or separates from the oath, *extrinsic*. Where the quality makes a part of the allegation which is relevantly referred to oath, it is intrinsic. Thus, because a merchant, suing for furnishings after the three years, must, in order to make a relevancy, offer to prove by the defender's oath, not only the delivery of the goods, but that the price is still due; therefore, though the defender should acknowledge upon oath his having received the goods, yet, if he adds, that he paid the price, this last part being a denial that the debt subsists, is intrinsic, since it is truly the point referred to oath. Where the quality does not import an extinction of the debt, but barely a counter-claim, or *mutua petitio*, against the pursuer, it is held as extrinsic, and must be proved *alimunde*. Neither can a defender who in his oath admits the constitution of a debt, get off by adjecting the quality of payment, where the payment ought by its nature to be vouched by written evidence.

6. Oaths of verity are sometimes referred by the judge to either party, *ex officio*; which, because they are not founded on any implied contract between the litigants, are not finally decisive, but may be traversed on proper evidence afterwards produced. These oaths are commonly put by the judge for supplying a lame or imperfect proof, and are therefore called *oaths in supplement*. (See par. 2.)

7. To prevent groundless allegations, oaths of calumny have been introduced, by which either party may demand his adversary's oath, that he believes the fact contained in his libel or defences to be just and true. As this is an oath, not of verity, but only of opinion, the party who puts it to his adversary does not renounce other probation; and therefore no party is bound to give an oath of calumny, on recent facts of his own, for such oath is really an oath of verity. These oaths have not been so frequent since the act of federunt, Feb. 1. 1715, whereby any party, against whom a fact shall be alleged, is obliged, without making oath, to confess or deny it; and, in case of calumnious denial, is subjected to the expence that the other party has thereby incurred.

8. In all oaths, whether of verity or calumny, the citation carries, or at least implies, a certification, that if the party does not appear at the day assigned for deposing, he shall be held *pro confesso*; from a presumption

Scotland.

Qualifi-  
oaths.

Oaths in  
supplem-

Oath of  
calumny

tion

tion of his consciousness, that the fact upon which he declines to swear makes against him; but no party can be held *pro confesso*, if he be in the kingdom, without a previous personal citation used against him. Though an oath which resolves into a *non inominis*, cannot be said to prove any point; yet where one so deposes upon a recent fact, to which he himself was privy, his oath is considered as a dissembling of the truth, and he is held *pro confesso*, as if he had refused to swear.

9. An oath *in litem*, is that which the judge refers to a pursuer, for ascertaining either the quantity or the value of goods which have been taken from him by the defender without order of law, or the extent of his damages. An oath *in litem*, as it is the affirmation of a party in his own behalf, is only allowed where there is proof that the other party has been engaged in some illegal act, or where the public policy has made it necessary, (see n<sup>o</sup> clxxiii. 11.) This oath, as to the quantities, is not admitted, where there is a concurring testimony of witnesses brought in proof of it. When it is put as to the value of goods, it is only an oath of credulity; and therefore it has always been subject to the modification of the court.

10. The law of Scotland rejects the testimony of witnesses, (1.) In payment of any sum above L. 100 Scots, all which must be proved either *scripto vel juramento*. (2.) In all gratuitous promises, though for the smallest trifle. (3.) In all contracts, where writing is either essential to their constitution, (see n<sup>o</sup> clxxiv. 2.) or where it is usually adhibited, as in the borrowing of money. And it is a general rule, subject to the restrictions mentioned in the next par. that no debt or right, once constituted by writing, can be taken away by witnesses.

11. On the other part, probation by witnesses is admitted to the extent of L. 100 Scots, in payments, nuncupative legacies, and verbal agreements which contain mutual obligations. And it is received to the highest extent, (1.) In all bargains which have known engagements naturally arising from them, concerning moveable goods. (2.) In facts performed in satisfaction, even of a written obligation, where such obligation binds the party precisely to the performance of them. (3.) In facts which with difficulty admit of a proof by writing, even though the effect of such proof should be the extinction of a written obligation, especially if the facts import fraud or violence; thus, a bond is reducible *ex dolo*, on a proof by witnesses. Lastly, all intromission by a creditor with the rents of his debtor's estate payable in grain, may be proved by witnesses; and even intromission with the silver-rent, where the creditor has entered into the total possession of the debtor's lands.

12. No person, whose near relation to another bars him from being a judge in his cause, can be admitted as a witness for him; but he may against him, except a wife or child, who cannot be compelled to give testimony against the husband or parent, *ob reverentiam personarum, et metum perjurii*. Though the witness, whose propinquity to one of the parties is objected to, be as nearly related to the other, the objection stands good.

13. The testimony of infamous persons is rejected, *i. e.* persons who have been guilty of crimes that law declares to infer infamy, or who have been declared infamous by the sentence of a judge; but *infamia facti*

does not disqualify a witness. Pupils are inhabile witnesses; being, in the judgment of law, incapable of the impressions of an oath. And in general witnesses otherwise exceptionable may, where there is a penalty of witnesses arising from the nature or circumstances of the fact, be received *cum nota*; that is, their testimony, though not quite free from suspicion, is to be conjoined with the other evidence, and to have such weight given it as the judge shall think it deserves.

14. All witnesses, before they are examined in the cause, are purged of partial counsel; that is, they must declare, that they have no interest in the suit, nor have given advice how to conduct it; that they have got neither bribe nor promise, nor have been instructed how to depose; and that they bear no enmity to either of the parties. These, because they are the points put to a witness before his making oath, are called *initialia testimonii*. Where a party can bring present proof of a witness's partial counsel, in any of the above particulars, he ought to offer it before the witness be sworn; but, because such objection, if it cannot be instantly verified, will be no bar to the examination, law allows the party in that case to protest for *reprobator*, before the witness is examined; *i. e.* that he may be afterwards allowed to bring evidence of his enmity, or other inability. Reprobator is competent even after sentence, where protestation is duly entered; but in that case, the party insisting must consign L. 100 Scots, which he forfeits if he succeed. This action must have the concurrence of the king's advocate, because the conclusion of it imports perjury; and for this reason, the witness must be made a party to it.

15. The interlocutory sentence or warrant, by which parties are authorized to bring their proof, is either by way of act, or of incident diligence. In an act, the lord ordinary who pronounces it is no longer judge in the process; but in an incident diligence, which is commonly granted upon special points, that do not exhaust the cause, the lord ordinary continues judge. If a witness does not appear at the day fixed by the warrant of citation, a second warrant is granted of the nature of a caption, containing a command to messengers to apprehend and bring him before the court. Where the party to whom a proof is granted, brings none within the term allowed by the warrant, an interlocutor is pronounced, circumducing the term, and precluding him from bringing evidence thereafter. Where evidence is brought, if it be upon an act, the lord ordinary on the acts, after the term for proving is elapsed, declares the proof concluded; and thereupon a state of the case is prepared by the ordinary on concluded causes, which must be judged by the whole lords; but if the proof be taken upon an incident diligence, the import of it may be determined by the lord ordinary in the cause.

16. Where facts do not admit a direct proof, presumptions are received as evidence which in many cases, make as convincing a proof as the direct. Presumptions are consequences deduced from facts known or proved, which infer the certainty, or at least a strong probability, of another fact to be proved. This kind of probation is therefore called *artificial*, because it requires a reasoning to infer the truth of the point in question, from the facts that already appear in proof. Presumptions are either, 1. *juris et de jure*; 2. *juris*; or, 3. *hominis*

Purgation of witnesses.

Diligence against witnesses.

Circumduction.

Presumptions.

Law of  
Scotland.

*minis* or *judicis*. The first sort obtains, where statute or custom establishes the truth of any point upon a presumption; and it is so strong, that it rejects all proof that may be brought to elide it in special cases. Thus, the testimony of a witness, who forwardly offers himself without being cited, is, from a presumption of his partiality, rejected, let his character be ever so fair; and thus also, a minor, because he is by law presumed incapable of conducting his own affairs, is upon that presumption disabled from acting without the consent of his curators, though he should be known to behave with the greatest prudence. Many such presumptions are fixed by statute.

17. *Præsumptiones juris* are those which our law-books or decisions have established, without founding any particular consequence upon them, or statuting *super præsumpto*. Most of this kind are not proper presumptions inferred from positive facts, but are founded merely on the want of a contrary proof; thus, the legal presumptions for freedom, for life, for innocence, &c. are in effect so many negative propositions, that ferivitude, death, and guilt, are not to be presumed, without evidence brought by him who makes the allegation. All of them, whether they be of this sort, or proper presumptions, as they are only conjectures formed from what commonly happens, may be elided, not only by direct evidence, but by other conjectures, affording a stronger degree of probability to the contrary. *Præsumptiones hominis* or *judicis*, are those which arise daily from the circumstances of particular cases; the strength of which is to be weighed by the judge.

*Fictio juris.*

18. A *fictio juris* differs from a presumption. Things are presumed, which are likely to be true; but a fiction of law assumes for truth what is either certainly false, or at least is as probably false as true. Thus an heir is feigned or considered in law as the same person with his ancestor. Fictions of law must, in their effects, be always limited to the special purposes of equity for which they were introduced; see an example, N° clxxxiii. 3.

clxxxv.

### SECT. III. Of Sentences and their Executions.

PROPERTY would be most uncertain, if debateable points might, after receiving a definitive judgement, be brought again in question, at the pleasure of either of the parties: every state has therefore fixed the character of final to certain sentences or decrees, which in the Roman law are called *res judicate*, and which exclude all review or rehearing.

*Res judicate.*

Decrees in  
*foro.*

2. Decrees of the court of session, are either *in foro contradictorio*, where both parties have litigated the cause, or in absence of the defender. Decrees of the session *in foro* cannot, in the general case, be again brought under the review of the court, either on points which the parties neglected to plead before sentence (which we call *competent* and *omitted*), or upon points pleaded and found insufficient (proponed and repelled.) But decrees, though *in foro*, are reversible by the court, where either they labour under essential nullities; e. g. where they are *ultra petita*, or not conformable to their grounds and warrants, or founded on an error in calcul, &c.; or where the party against whom the decree is obtained has thereafter recovered

evidence sufficient to overturn it, of which he knew not before.

Law of  
Scotland.

3. As parties might formerly reclaim against the sentences of the session, at any time before extracting the decree, no judgment was final till extract; but now, a sentence of the inner-house, either not reclaimed against within six sederunt days after its date, or adhered to upon a reclaiming bill, though it cannot receive execution till extract, makes the judgment final as to the court of session. And, by an order of the house of lords, March 24. 1725, no appeal is to be received by them from sentences of the session, after five years from extracting the sentence; unless the person intitled to such appeal be minor, clothed with a husband, *non compos mentis*, imprisoned, or out of the kingdom. Sentences pronounced by the lord ordinary have the same effect, if not reclaimed against, as if they were pronounced in presence; and all petitions against the interlocutor of an ordinary must be preferred within eight sederunt days after signing such interlocutor.

Two con-  
cutive in-  
terlocuto-  
res are final.

Time li-  
ted for a  
peals.

Decrees  
in absence.

4. Decrees, in absence of the defender, have not the force of *res judicate* as to him; for where the defender does not appear, he cannot be said to have subjected himself by the judicial contract which is implied in litigation; a party therefore may be restored against these, upon paying to the other his costs in recovering them. The sentences of inferior courts may be reviewed by the court of session,—before decree, by advocacy,—and after decree, by suspension or reduction; which two last are also the methods of calling in question such decrees of the session itself, as can again be brought under the review of the court.

Decrees  
viewed  
ther by  
duction  
suspensio

5. Reduction is the proper remedy, either where the decree has already received full execution by payment, or where it decrees nothing to be paid or performed, but simply declares a right in favour of the pursuer. Suspension is that form of law by which the effect of a sentence condemnatory, that has not yet received execution, is stayed or postponed till the cause be again considered. The first step towards suspension is a bill preferred to the lord ordinary on the bills. This bill, when the desire of it is granted, is a warrant for issuing letters of suspension which pass the signet; but if the presenter of the bill shall not, within 14 days after passing it, expedite the letters, execution may by act of sederunt 1677 proceed on the sentence. In practice, however, it is usual for the charger to put up a protestation in the minute-book for production of the suspension, which may be expedited at any time before this is done; and if the suspender shall allow the protestation to be extracted, the suit falls. Suspensions of decrees *in foro* cannot pass, but by the whole lords in time of session, and by three in vacation time; but other decrees may be suspended by any one of the judges. By the late act of sederunt (1787), in order to remedy the abuse of presenting a multiplicity of bills of suspension of the decrees of inferior judges in small causes which have passed in absence, it is declared, that all bills of suspension of decrees by inferior judges in absence of the defenders in causes under 12 l. Sterling value, shall be refused and remitted to the inferior judge if competent; the suspender, however, before being heard in the inferior court, reimburse

Law of Scotland.   
 ing the charger of the expences incurred by him previous to the remit.

6. As suspension has the effect of staying the execution of the creditor's legal diligence, it cannot, in the general case, pass without caution given by the suspender to pay the debt, in the event it shall be found due. Where the suspender cannot, from his low or suspected circumstances, procure unquestionable security, the lords admit juratory caution, *i. e.* such as the suspender swears is the best he can offer; but the reasons of suspension are, in that case, to be considered with particular accuracy at passing the bill. Decrees in favour of the clergy, of universities, hospitals, or parish-schoolmasters, for their stipends, rents, or salaries, cannot be suspended, but upon production of discharges, or on consignation of the sums charged for. A charger, who thinks himself secure without a cautioner, and wants dispatch, may, where a suspension of his diligence is sought, apply to the court to get the reasons of suspension summarily discussed on the bill.

7. Though he, in whose favour the decree suspended is pronounced, be always called the charger, yet a decree may be suspended before a charge be given on it. Nay, suspension is competent even where there is no decree, for putting a stop to any illegal act whatsoever; thus, a building, or the exercise of a power which one assumes unwarrantably, is a proper subject of suspension. Letters of suspension are considered merely as a prohibitory diligence; so that the suspender, if he would turn provoker, must bring an action of reduction. If, upon discussing the letters of suspension, the reasons shall be sustained, a decree is pronounced, suspending the letters of diligence on which the charge was given *simpliciter*; which is called a *decree of suspension*, and takes off the effect of the decree suspended. If the reasons of suspension be repelled, the court find the letters of diligence orderly proceeded, *i. e.* regularly carried on; and they ordain them to be put to farther execution.

8. Decrees are carried into execution, by diligence, either against the person or against the estate of the debtor. The first step of personal execution is by letters of horning, which pass by warrant of the court of session, on the decrees of magistrates of boroughs, sheriffs, admirals, and commissaries. If the debtor does not obey the will of the letters of horning within the days of the charge, the charger, after denouncing him rebel, and registering the horning, may apply for letters of caption, which contain a command, not only to messengers, but to magistrates, to apprehend and imprison the debtor. All messengers and magistrates, who refuse their assistance in executing the caption, are liable *subsidiariè* for the debt; and such subsidiary action is supported by the execution of the messenger employed by the creditor, expressing that they were charged to concur, and would not. Letters of caption contain an express warrant to the messenger, in case he cannot get access, to break open all doors and other lock-fast places.

9. Law secures peers, married women, and pupils, against personal execution by caption upon civil debts. Such commoners also as are elected to serve in parliament, are secured against personal execution by the privilege of parliament. No caption can be executed

against a debtor within the precincts of the king's palace of Holyroodhouse: but this privilege of sanctuary afforded no security to criminals, as that did which was, by the canon law, conferred on churches and religious houses. Where the personal presence of a debtor, under caption, is necessary in any of our supreme courts, the judges are empowered to grant him a protection, for such time as may be sufficient for his coming and going, not exceeding a month. Protection from diligence is also granted by the court of session under the late bankrupt statute, where it is applied for, with concurrence of the trustee, or a certain number of the creditors as the case may require.

10. After a debtor is imprisoned, he ought not to be indulged the benefit of the air, not even under a guard; for creditors have an interest, that their debtors be kept under close confinement, that, by the *squalor carceris*, they may be brought to pay their debt: and any magistrate or jailor, who shall suffer the prisoner to go abroad, without a proper attestation, upon oath, of the dangerous state of his health, is liable *subsidiariè* for the debt. Magistrates are in like manner liable, if they shall suffer a prisoner to escape through the insufficiency of their prison: but, if he shall escape under night, by the use of instruments, or by open force, or by any other accident which cannot be imputed to the magistrates or jailor, they are not chargeable with the debt; provided they shall have, immediately after his escape, made all possible search for him. A case lately occurred where a messenger having apprehended a person for a debt, upon letters of caption, delivered him over to the provost of the burgh, and took a receipt for him. The provost allowed him to remain at the inn all night, and afterwards allowed him what is called *open gaol*, by which he had access to the court-house, under the same roof with the prison, where he transacted business. As the person at whose instance he was apprehended upon the caption, considered that the magistrates had not kept the debtor in prison as commanded by the letters, brought an action against them for the debt, although the debtor had not so much as attempted to make his escape. It was contended by the magistrates, that they were not liable, having only followed the usual practice of the burgh: but the court of session, considering the magistrates as principal keepers of the prison, and as such having no discretionary power, were of opinion, that the debtor had never been imprisoned in the eye of law, and therefore found the magistrates liable; and their judgment was affirmed upon appeal. Regularly, no prisoner for debt upon letters of caption, though he should have made payment, could be released without letters of suspension, containing a charge to the jailor to set him at liberty; because the creditor's discharge could not take off the penalty incurred by the debtor for contempt of the king's authority: but to save unnecessary expence to debtors in small debts, jailors are empowered to let go prisoners where the debt does not exceed 200 merks Scots, upon production of a discharge, in which the creditor consents to his release.

11. Our law, from a consideration of compassion, allows insolvent debtors to apply for a release from prison upon a *cessio bonorum*, *i. e.* upon their making over to the creditors all their estate real and personal. This must be insisted for by way of action, to which all the

Law of Scotland.

Prisoners must be closely confined.

Form of liberating a prisoner.

Liberation upon a cessio bonorum.

creditors.

Law of Scotland.

Law of Scotland.

creditors of the prisoner ought to be made parties. The prisoner must, in this action, which is cognizable only by the court of session, exhibit a particular inventory of his estate, and make oath that he has no other estate than is therein contained, and that he has made no conveyance of any part of it, since his imprisonment, to the hurt of his creditors. He must also make oath, whether he has granted any disposition of his effects before his imprisonment, and condescend on the persons to whom, and on the cause of granting it; that the court may judge, whether, by any collusive practice, he has forfeited his claim to liberty.

ed from the ordinary words of style, empowering the arbiters to determine betwixt and the day of next to come; therefore, where a submission is indefinite, without specifying any time, like all other contracts or obligations, it subsists for 40 years. Submissions, like mandates, expire by the death of any of the parties-submitters before sentence. As arbiters are not vested with jurisdiction, they cannot compel witnesses to make oath before them, or havers of writings to exhibit them; but this defect is supplied by the court of session, who, at the suit of the arbiters, or of either of the parties, will grant warrant for citing witnesses, or for the exhibition of writings. For the same reason, the power of arbiters is barely to decide; the execution of the decree belongs to the judge. Where the submitters consent to the registration of the decree-arbitral, performance may be enforced by summary diligence.

not competent to delinquents.

12. A fraudulent bankrupt is not allowed this privilege; nor a criminal who is liable in any assythment or indemnification to the party injured or his executors, though the crime itself should be extinguished by a pardon. A disposition granted on a *cessio bonorum* is merely in farther security to the creditors, not in satisfaction or in *solutum* of the debts. If, therefore, the debtor shall acquire any estate after his release, such estate may be attached by his creditors, as if there had been no *cessio*, except in so far as is necessary for his subsistence. Debtors, who are set free on a *cessio bonorum*, are obliged to wear a habit proper to dyvours or bankrupts. The lords are prohibited to dispense with this mark of ignominy, unless, in the summons and process of *cessio*, it be libelled, sustained, and proved, that the bankruptcy proceeds from misfortune. And bankrupts are condemned to submit to the habit, even where no suspicion of fraud lies against them, if they have been dealers in an illicit trade.

Powers of arbiters.

16. The power of arbiters is wholly derived from the consent of parties. Hence where their powers are limited to a certain day, they cannot pronounce sentence after that day. Nor can they subject parties to a penalty higher than that which they have agreed to in the submission. And where a submission is limited to special claims, sentence pronounced on subjects not specified in the submission is null, as being *ultra vires compromissi*.

Dyvoor's habit.

17. But, on the other hand, as submissions are designed for a most favourable purpose, the amicable composing of differences, the powers thereby conferred on arbiters receive an ample interpretation. Decrees-arbitral are not reducible upon any ground, except corruption, bribery, or falsehood.

Decrees arbitral, h far reducible.

13. Where a prisoner for debt declares upon oath, before the magistrate of the jurisdiction, that he has not wherewith to maintain himself, the magistrate may set him at liberty, if the creditor, in consequence of whose diligence he was imprisoned, does not alimnt him within ten days after intimation made for that purpose. But the magistrate may, in such case, detain him in prison, if the creditor chuses to bear the burden of the alimnt rather than release him. The statute authorising this release, which is usually called the *act of grace*, is limited to the case of prisoners for civil debts.

Alimnt.

SECT. IV. Of Crimes.

clxxvii

Act of grace.

THE word *crime*, in its most general sense, includes every breach either of the law of God or of our country; in a more restricted meaning, it signifies such transgressions of law as are punishable by courts of justice. Crimes were, by the Roman law, divided into public and private. Public crimes were those that were expressly declared such by some law or constitution, and which, on account of their more atrocious nature and hurtful consequences, might be prosecuted by any member of the community. Private crimes could be pursued only by the party injured, and were generally punished by a pecuniary fine to be applied to his use. By the law of Scotland, no private party, except the person injured, or his next of kin, can accuse criminally: but the king's advocate, who in this question represents the community, has a right to prosecute all crimes in *vindictam publicam*, though the party injured should refuse to concur. Smaller offences, as petty riots, injuries, &c. which do not demand the public vengeance, pass generally by the appellation of *delicts*, and are punished either by fine or imprisonment.

Execution against the debtor's estate.

14. Decrees are executed against the moveable estate of the debtor by arrestment or pouding; and against his heritable estate, by inhibition, or adjudication. If one be condemned, in a removing or other process, to quit the possession of lands, and refuses, notwithstanding a charge, letters of ejection are granted of course, ordaining the sheriff to eject him, and to enter the obtainer of the decree into possession. Where one opposes by violence the execution of a decree, or of any lawful diligence, which the civil magistrate is not able by himself and his officers to make good, the execution is enforced *manu militari*.

Decrees arbitral.

Submission.

15. A decree arbitral, which is a sentence proceeding on a submission to arbiters, has some affinity with a judicial sentence, though in most respects the two differ. A submission is a contract entered into by two or more parties who have disputable rights or claims, whereby they refer their differences to the final determination of an arbiter or arbiters, and oblige themselves to acquiesce in what shall be decided. Where the day within which the arbiters are to decide, is left blank in the submission, practice has limited the arbiters power of deciding to a year. As this has proceed-

What essential to crimes.

2. The essence of a crime is, that there be an intention in the actor to commit; for an action in which the will of the agent has no part, is not a proper object either of rewards or punishments: hence arises the rule *crimen dolo contrahitur*. Simple negligence does not therefore constitute a proper crime. Yet where it is extremely gross, it may be punished arbitrarily. Far less can we reckon in the number of crimes, those committed

mitted

Law of  
Scotland.Law of  
Scotland.

mitted by an idiot or furious person: but lesser degrees of fatuity, which only darken reason, will not afford a total defence, though they may save from the *pana ordinaria*. Actions committed in drunkenness are not to be considered as involuntary, seeing the drunkenness itself, which was the first cause of the action, is both voluntary and criminal.

3. On the same principle, such as are in a state of infancy, or in the confines of it, are incapable of a criminal action, dole not being incident to that age; but the precise age at which a person becomes capable of dole, being fixed neither by nature nor by statute, is by our practice to be gathered by the judge, as he best can, from the understanding and manners of the person accused. Where the guilt of a crime arises chiefly from statute, the actor, if he is under puberty, can hardly be found guilty; but, where nature itself points out its deformity, he may, if he is *proximus pubertati*, be more easily presumed capable of committing it: yet, even in that case, he will not be punished *pana ordinaria*.

Accessories,  
or art  
and part.

4. One may be guilty of a crime, not only by perpetrating it himself, but being accessory to a crime committed by another; which last is by civilians styled *ope et consilio*, and, in our law-phrase, *art and part*. A person may be guilty, art and part, either by giving advice or counsel to commit the crime; or, 2. By giving warrant or mandate to commit it; or, 3. By actually assisting the criminal in the execution. It is generally agreed by doctors, that, in the more atrocious crimes, the adviser is equally punishable with the criminal; and that, in the slighter, the circumstances arising from the adviser's lesser age, the jocular or careless manner of giving advice, &c. may be received as pleas for softening the punishment. One who gives mandate to commit a crime, as he is the first spring of action, seems more guilty than the person employed as the instrument in executing it; yet the actor cannot excuse himself under the pretence of orders which he ought not to have obeyed.

5. Assistance may be given to the committer of a crime, not only in the actual execution, but previous to it, by furnishing him, intentionally, with poison, arms, or the other means of perpetrating it. That sort of assistance which is not given till after the criminal act, and which is commonly called *abetting*, though it be of itself criminal, does not infer art and part of the principal crime; as if one should favour the escape of a criminal knowing him to be such, or conceal him from justice.

Punishment  
of  
crimes.

6. Those crimes that are in their consequences most hurtful to society, are punished capitally, or by death; others escape with a lesser punishment, sometimes fixed by statute, and sometimes arbitrary, *i. e.* left to the discretion of the judge, who may exercise his jurisdiction, either by fine, imprisonment, or a corporal punishment. Where the punishment is left, by law, to the discretion of the judge, he can in no case extend it to death. The single escape of the criminal falls on conviction, in all capital trials, though the sentence should not express it.

blasphemy.

7. Certain crimes are committed more immediately against God himself; others, against the state; and a third kind, against particular persons. The chief crime in the first class, cognisable by temporal courts, is *blas-*

*phemy*, under which may be included *atheism*. This crime consists in the denying or vilifying the Deity, by speech or writing. All who curse God or any of the persons of the blessed Trinity, are to suffer death, even for a single act; and those who deny him, if they persist in their denial. The denial of a Providence, or of the authority of the holy Scriptures, is punishable capitally for the third offence.

8. No prosecution can now be carried on for witchcraft or conjuration. But all who undertake, from their skill in any occult science, to *tell fortunes*, or *discover stolen goods*, are to suffer imprisonment for a year, stand in the pillory four times in that year, and find surety for their future good behaviour.

9. Some crimes against the state are levelled directly against the supreme power, and strike at the constitution itself: others discover such a contempt of law, as tends to baffle authority, or slacken the reins of government. *Treason, crimen majestatis*, is that crime which is aimed against the majesty of the state; and can be committed only by those who are subjects of that state either by birth or residence. Soon after the union of the two kingdoms in 1707, the laws of treason, then in force in England, were made ours by 7 *Ann. c. 21.* both with regard to the facts constituting that crime, to the forms of trial, the corruption of blood, and all the penalties and forfeitures consequent on it.

10. It is high treason, by the law of England, to imagine the death of the King, Queen-consort, or of the heir apparent of the crown; to levy war against the King, or adhere to his enemies; to counterfeit the king's coin, or his great or privy seal; to kill the chancellor, treasurer, or any of the 12 judges of England, while they are doing their offices: which last article is by the forenamed act 7 *Ann.* applied to Scotland, in the case of slaying any judge of the session or of judiciary sitting in judgment. Those who wash, clip, or lighten, the proper money of the realm; who advisedly affirm by writing or printing, that the Pretender has any right to the crown, that the king and parliament cannot limit the succession to it, or who hold correspondence with the Pretender, or any person employed by him, are also guilty of treason.

11. The forms of proceeding in the trial of treason, Pains of treason. whether against peers or commoners, are set forth in a small treatise, published by order of the house of lords in 1709, subjoined to a collection of statutes concerning treason. By the conviction upon this trial, the whole estate of the traitor forfeits to the crown. His blood is also corrupted, so that, on the death of an ancestor, he cannot inherit; and the estate which he cannot take, falls to the immediate superior as escheat, *ob defectum heredis*, without distinguishing whether the lands hold of the crown, or of a subject. No attainer for treason shall, after the death of the Pretender and all his sons, hurt the right of any person, other than that of the offender, during his natural life; the rights of creditors and other third parties, in the case of forfeiture on treason, must be determined by the law of England.

12. *Misprison of treason*, from *meprendre*, is the overlooking or concealing of treason. It is inferred by one's bare knowledge of the crime, and not discovering it to a magistrate or other person intitled by his office

Law of  
Scotland.Law of  
Scotland.

office to take examinations; though he should not in the least degree assent to it. The foresaid act 7 *Ann.* makes the English law of misprision ours. Its punishment is, by the law of England, perpetual imprisonment, together with the forfeiture of the offender's moveables, and of the profits of his heritable estate, during his life; that is, in the style of our law, his single and life-entire.

Sedition.

13. The crime of *sedition* consists in the raising commotions or disturbances in the state. It is either verbal or real. Verbal sedition, or leasing making, is inferred from the uttering of words tending to create discord between the king and his people. It is punished either by imprisonment, fine, or banishment, at the discretion of the judge. Real sedition is generally committed by convocating together any considerable number of people, without lawful authority, under the pretence of redressing some public grievance, to the disturbing of the public peace. Those who are convicted of this crime are punished by the confiscation of their goods; and their lives are at the king's will. If any persons, to the number of 12, shall assemble, and being required by a magistrate or constable to disperse, shall nevertheless continue together for an hour after such command, the persons disobeying shall suffer death and confiscation of moveables.

Corruption  
in judges.

14. Judges, who, wilfully or through corruption, use their authority as a cover to injustice or oppression, are punished with the loss of honour, fame, and dignity. Under this head may be classed *thesibote* (from *bote*, "compensation"), which is the taking a consideration in money or goods from a thief to exempt him from punishment, or connive at his escape from justice. A sheriff or other judge, guilty of this crime, forfeits his life and goods. And even a private person, who takes thesibote, suffers as the principal thief. The buying of disputed claims, concerning which there is a pending process, by any judge or member either of the session or of an inferior court, is punished by the loss of the delinquent's office, and all the privileges thereto belonging.

Deforcement.

15. Deforcement is the opposition given, or resistance made, to messengers or other officers, while they are employed in executing the law. The court of session is competent to this crime. It is punishable with the confiscation of moveables, the one half to the king, and the other to the creditor at whose suit the diligence was used. Armed persons, to the number of three or more, assisting in the illegal running, landing, or exporting of prohibited or uncustomed goods, or any who shall resist, wound, or maim any officer of the revenue, in the execution of his office, are punishable with death and the confiscation of moveables.

Breach of  
arrestment.

16. *Breach of arrestment* (see N<sup>o</sup> lxxviii. §.) is a crime of the same nature with deforcement, as it imports a contempt of the law and of our judges. It subjects to an arbitrary corporal punishment, and the escheat of moveables; with a preference to the creditor for his debt, and for such farther sum as shall be modified to him by the judge. Under this head of crimes against good government and police, may be reckoned the *forestalling of markets*; that is, the buying of goods intended for a public market, before they are carried there; which for the third criminal act infers the escheat of moveables; as also slaying salmon in  
N<sup>o</sup> 178.

Forestal-  
ling, &c.

forbidden time, destroying plough graith in time of tillage, slaying or houghing horses or cows in time of harvest, and destroying or spoiling growing timber; as to the punishment of which, see statutes 1503, c. 72. — 1587, c. 82. and 1689, c. 16.—1 *Geo. 1. St. 2.* c. 48.

Murder.

17. Crimes against particular persons may be directed either against life, limb, liberty, chastity, goods, or reputation. *Murder* is the wilful taking away of a person's life, without a necessary cause. Our law makes no distinction betwixt premeditated and sudden homicide: both are punished capitally. Casual homicide, where the actor is in some degree blameable; and homicide in self-defence, where the just bounds of defence have been exceeded; are punished arbitrarily; but the slaughter of night-thieves, house-breakers, assistants in masterful depredations, or rebels denounced for capital crimes, may be committed with impunity. The crime of *denembration*, or the cutting off of a member, is joined with that of murder; but in practice, its punishment has been restricted to the escheat of moveables, and an assythment or indemnification to the party. *Mutilation*, or the disabling of a member, is punished at the discretion of the judge.

18. *Self-murder* is as highly criminal as the killing our neighbour; and for this reason, our law has, contrary to the rule, *crimina morte extinguuntur*, allowed a proof of the crime, after the offender's death, that his single escheat might fall to the king or his donatory. To this end, an action must be brought, not before the justiciary, but the session, because it is only intended *ad civilem effectum*, for proving and declaring the self-murder; and the next of kin to the deceased must be made a party to it.

Parricide.

19. The punishment of parricide, or of the murder of a parent, is not confined, by our law, to the criminal himself. All his posterity in the right line are declared incapable of inheriting; and the succession devolves on the next collateral heir. Even the cursing or beating of a parent infers death, if the person guilty be above 16 years; and an arbitrary punishment, if he be under it. A presumptive or statutory murder is constituted by 1690, c. 21. by which any woman who shall conceal her pregnancy, during its whole course, and shall not call for, or make use of, help in the birth, is to be reputed the murderer, if the child be dead, or amissing. This act was intended to discourage the unnatural practice of women making away with their children begotten in fornication, to avoid church-censures.

Duelling.

20. *Duelling*, is the crime of fighting in single combat, on previous challenges given and received. Fighting in a duel, without licence from the king, is punishable by death; and whatever person, principal or second, shall give a challenge to fight a duel, or shall accept a challenge, or otherwise engage therein, is punished by banishment and escheat of moveables, though no actual fighting should ensue.

21. *Haimfucken* (from *haim* "home," and *socken* "to Haimfucken or pursue") is the assaulting or beating of a person in his own house. The punishment of this crime is nowhere defined, except in the books of the Majesty, which make it the same as that of a rape; and it is, like rape, capital by our practice. The assault must be made in the proper house of the person assaulted, where

Law of Scotland.

Law of Scotland.

Battery.

where he lies and rises daily and nightly; so that neither a public house, nor even a private, where one is only transiently, falls within the law.

22. Any party to a law-suit, who shall slay, wound, or otherwise invade his adversary, at any period of time between executing the summons and the complete execution of the decree, or shall be accessory to such invasion, shall lose his cause. The sentence pronounced on this trial, against him who has committed the battery, is not subject to reduction, either on the head of minority, or on any other ground whatever: and if the person prosecuted for this crime shall be denounced for not appearing, his liferent, as well as single escheat, falls upon the denunciation.

wrongous imprisonment.

23. The crime of *wrongous imprisonment* is inferred, by granting warrants of commitment in order to trial, proceeding on informations not subscribed, or without expressing the cause of commitment; by receiving or detaining prisoners on such warrants; by refusing to a prisoner a copy of the warrant of commitment; by detaining him in close confinement, above eight days after his commitment; by not releasing him on bail, where the crime is bailable; and by transporting persons out of the kingdom, without either their own consent, or a lawful sentence. The persons guilty of a wrongous imprisonment are punished by a pecuniary mulct, from L. 6000 down to L. 400 *Scots*, according to the rank of the person detained; and the judge, or other person guilty, is over and above subjected to pay to the person detained a certain sum *per diem*, proportioned to his rank, and is declared incapable of public trust. All these penalties may be insisted for by a summary action before the session, and are subject to no modification.

Adultery.

24. *Adultery*, is the crime by which the marriage-bed is polluted. This crime could neither by the Roman nor Jewish law be committed, but where the guilty woman was the wife of another: by ours, it is adultery, if either the man or woman be married. We distinguish between simple adultery, and that which is notorious or manifest. Open and manifest adulterers, who continue incorrigible, notwithstanding the censures of the church, are punished capitally. This crime is distinguished by one or other of the following characters: where there is issue procreated between the adulterers; or where they keep bed and company together notoriously; or where they give scandal to the church, and are, upon their obstinate refusing to listen to its admonitions, excommunicated. The punishment of simple adultery, not being defined by statute, is left to the discretion of the judge; but custom has made the falling of the single escheat one of its penalties.

Bigamy.

25. *Bigamy*, is a person's entering into the engagements of a second marriage, in violation of a former marriage-vow still subsisting. Bigamy, on the part of the man, has been tolerated in many states, before the establishment of Christianity, even by the Jews themselves; but it is prohibited by the precepts of the gospel, and it is punished by our law, whether on the part of the man or of the woman, with the pains of perjury.

Perjury.

26. *Perjury*, is committed by persons who stand within the degrees of kindred forbidden in *Lev. xviii.* and is punished capitally. The same degrees are prohibited in *Lev. xxi.*

bited in affinity, as in consanguinity, *Lev. xviii. 13. et seq.* As this crime is repugnant to nature, all children, whether lawful or natural, stand on an equal footing: *civilis ratio civilia jura corrumpere potest, non vero naturalia.* It is difficult indeed to bring a legal proof of a relation merely natural, on the side of the father; but the mother may be certainly known without marriage.

Rape.

27. There is no explicit statute making rape, or the ravishing of women, capital; but it is plainly supposed in act 1612. c. 4. by which the ravisher is exempted from the pains of death, only in the case of the woman's subsequent consent, or her declaration that she went off with him of her own free-will; and even then, he is to suffer an arbitrary punishment, either by imprisonment, confiscation of goods, or a pecuniary fine.

Theft.

28. *Theft* is defined, A fraudulent intermeddling with the property of another, with a view of making gain. Our ancient law proportioned the punishment of the theft to the value of the goods stolen; heightening it gradually, from a slight corporal punishment to a capital, if the value amounted to thirty-two pennies Scots, which in the reign of David I. was the price of two sheep. In several latter acts, it is taken for granted, that this crime is capital. But where the thing stolen is of small value, we consider it not as theft but as pickery, which is punished either corporally or by banishment. The breaking of orchards, and the stealing of green wood, is punished by a fine, which rises as the crime is repeated.

29. Theft may be aggravated into a capital crime, though the value of the thing stolen be trifling; as theft twice repeated, or committed in the night, or by landed men; or of things set apart for sacred uses. The receivers and concealers of stolen goods, knowing them to be such, suffer as thieves. Those who barely harbour the person of the criminal within 48 hours either before or after committing the crime, are punished as partakers of the theft. Such as sell goods belonging to thieves or lawless persons who dare not themselves come to market, are punished with banishment and the escheat of moveables.

Receivers of theft.

30. Theft attended with violence is called *robbery*; Robbery, and in our old statutes, *rief* or *stoutbrief*; under which &c. class may be included *forning*, or the taking of meat and drink by force, without paying for it. Stoutbrief came at last to be committed so audaciously, by bands of men associated together, that it was thought necessary to vest all our freeholders with a power of holding courts upon forners and rievors, and condemning them to death. Nay, all were capitally punished, who, to secure their lands from depredation, payed to the rievors a yearly contribution, which got the name of *black-mail*. An act also passed, commanding to banishment a band of forners, who were originally from *Egypt*, called *gyffies*, and adjudging to death all that should be reputed *Egyptians*, if found thereafter within the kingdom. Robbery committed on the seas is called *piracy*, and is punished capitally by the high admiral. Several of the facts which constitute this crime are set forth in a British statute, 8 *Geo. I. c. 24.*

31. *Falschood*, in a large sense, is the fraudulent imitation or suppression of truth, to the damage of another. The lives and goods of persons convicted of using false weights or measures were, by our old law, in the king's mercy;

Falschood.

Law of  
Scotland.

Forgery.

mercy: and their heirs could not inherit but upon a remission. The latest statute against this crime, punishes it by confiscation of moveables. That particular species of falsehood, which consists in the falsifying of writings, passes by the name of *forgery*. Our practice has now of a long time, agreeably to the Roman law, made this crime capital; unless the forgery be of executions, or other writings of smaller moment; in which case, it is punished arbitrarily.

32. The writing must not only be fabricated, but put to use or founded on, in order to infer this crime. And though it be strictly criminal, yet the trial of it is proper to the court of session; but where improbation is moved against a deed by way of exception, the inferior judge, before whom the action lies, is competent to it *ad civilem effectum*. When it is pleaded as an exception, our practice, to discourage affected delays, obliges the defender, who moves it, to consign L. 40 Scots; which he forfeits, if his plea shall appear calumnious.

33. Where a person, found guilty of forgery by the court of session, is by them remitted to the justiciary, an indictment is there exhibited against him, and a jury sworn, before whom the decree of session is produced, in place of all other evidence of the crime, in respect of which the jury find the pannel guilty; so that that decree being pronounced by a competent court, is held as full proof, or, in the style of the bar, as *probatis probata*.

Perjury.

34. *Perjury*, which is the judicial affirmation of a falsehood on oath, really constitutes the *crimen falsi*; for he who is guilty of it does, in the most solemn manner, substitute falsehood in the place of truth. To constitute this crime, the violation of truth must be deliberately intended by the swearer, and therefore reasonable allowances ought to be given to forgetfulness or misapprehension, according to his age, health, and other circumstances. The breach of a promissory oath, does not infer this crime; for he who promises on oath, may sincerely intend performance when he swears, and so cannot be said to call on God to attest a falsehood. Though an oath, however false, if made upon reference in a civil question, concludes the cause, the person perjured is liable to a criminal trial; for the effect of the reference can go no further than the private right of the parties.

35. Notwithstanding the mischievous consequences of perjury to society, it is not punished capitally, but by confiscation of moveables, imprisonment for a year, and infamy. The court of session is competent to perjury *incidenter*, when, in any examination upon oath, taken in a cause depending before them, a person appears to have sworn falsely; but in the common case, that trial is proper to the justiciary. *Subornation of perjury* consists in tampering with persons who are to swear in judgment, by directing them how they are to depose; and it is punished with the pains of perjury.

Stellionate.

36. The crime of *stellionate*, from *stellio*, includes every fraud which is not distinguished by a special name; but is chiefly applied to conveyances of the same numerical right, granted by the proprietor to different disponees. The punishment of stellionate must necessarily be arbitrary, to adapt it to the various natures and different aggravations of the fraudulent acts.

The persons guilty of that kind of it, which consists in granting double conveyances, are by our law declared infamous, and their lives and goods at the king's mercy. The cognizance of *fraudulent bankruptcy* is appropriated to the court of session, who may inflict any punishment on the offender that appears proportioned to his guilt, death excepted.

37. The crime of *usury*, before the reformation, consisted in the taking of *any* interest for the use of money; and now in taking an higher rate of interest than is authorised by law. It is divided into *usura manifesta*, or direct; and *velata*, or covered. One may be guilty of the first kind, either where he covenants with the debtor for more than the lawful interest on the loan-money: or where one receives the interest of a sum before it is due, since thereby he takes a consideration for the use of money before the debtor has really got the use of it. Where a debt is clogged with an uncertain condition, by which the creditor runs the hazard of losing his sum, he may covenant for an higher interest than the legal, without the crime of usury; for there, the interest is not given merely in consideration of the use of the money, but of the danger undertaken by the creditor.

38. Covered usury, is that which is committed under the mask nor of a loan but of some other contract; e. g. a sale or an improper wadset. And in general, all obligations entered into with an intention of getting more than the legal interest for the use of money, however they may be disguised, are usurious. As a farther guard against this crime, the taking more than the legal interest for the forbearance of payment of money, merchandize, or other commodities, by way of loan, exchange, or other contrivance whatever, or the taking a bribe for the loan of money, or for delaying its payment when lent, is declared usury. Where usury is proved, the usurious obligation is not only declared void, but the creditor, if he has received any unlawful profits, forfeits the treble value of the sums or goods lent. Usury, when it is to be pursued criminally, must be tried by the justiciary; but where the libel concludes only for voiding the debt, or restitution, the session is the proper court.

39. *Injury*, in its proper acceptation, is the reproaching or affronting our neighbour. Injuries are either verbal or real. A verbal injury, when directed against a private person, consists in the uttering contumelious words, which tend to expose our neighbour's character by making him little or ridiculous. It does not seem that the twitting one with natural defects, without any sarcastical reflections, though it be inhuman, falls under this description, as these imply no real reproach in the just opinion of mankind. Where the injurious expressions have a tendency to blacken one's moral character, or fix some particular guilt upon him, and are deliberately repeated in different companies, or handed about in whispers to confidants, it then grows up to the crime of slander: and where a person's moral character is thus attacked, the *animus injuriandi* is commonly inferred from the injurious words themselves, unless special circumstances be offered to take off the presumption, *ex. gr.* that the words were uttered in judgment in one's own defence, or by way of information to a magistrate, and had some foundation in fact. Though the cognizance of slander is proper to the com-

missaries,

Law of Scotland.

Law of Scotland.

missaries, who, as the *judices Christianitatis*, are the only judges of scandal; yet, for some time past, bare verbal injuries have been tried by other criminal judges, and even by the session. It is punished either by a fine, proportioned to the condition of the persons injuring and injured, and the circumstances of time and place; or if the injury import scandal, by publicly acknowledging the offence; and frequently the two are conjoined. The calling one a bankrupt is not, in strict speech, a verbal injury, as it does not affect the person's moral character; yet, as it may hurt his credit in the way of business, it founds him in an action of damages, which must be brought before the judge-ordinary. A real injury is inflicted by any fact by which a person's honour or dignity is affected; as striking one with a cane, or even aiming a blow without striking; spitting in one's face; assuming a coat of arms, or any other mark of distinction proper to another, &c. The composing and publishing defamatory libels may be reckoned of this kind. Real injuries are tried by the judge-ordinary, and punished either by fine or imprisonment, according to the demerit of the offenders.

40. After having shortly explained the several crimes punishable by our law, this treatise may be concluded with a few observations on criminal jurisdiction, the forms of trial, and the methods by which crimes may be extinguished. Criminal jurisdiction is founded, 1. *Ratione domicilii*, if the defender dwells within the territory of the judge. Vagabonds, who have no certain *domicile*, may be tried wherever they are apprehended. 2. *Ratione delicti*, if the crime was committed within the territory. Treason is triable, by the English law, in any county that the king should appoint; and, by a temporary act now expired, treason committed in certain Scots counties, was made triable by the court of judiciary, wherever it should sit.

Criminal jurisdiction

41. No criminal trial can proceed, unless the person accused is capable of making his defence. Absents therefore cannot be tried; nor fatuous nor furious persons, *durante furore*, even for crimes committed while they were in their senses. For a like reason, minors who had no curators, could not, by the Roman law, be tried criminally; but our practice considers every person who is capable of dole, to be also sufficiently qualified for making his defence in a criminal trial.

That persons are not liable.

42. No person can be imprisoned in order to stand trial for any crime, without a warrant in writing expressing the cause, and proceeding upon a subscribed information, unless in the case of indignities done to judges, riots, and the other offences specially mentioned in 1701. c. 6. Every prisoner committed in order to trial, if the crime of which he is accused be not capital, is entitled to be released upon bail, the extent of which is to be modified by the judge, not exceeding 12,000 merks Scots for a nobleman, 6000 for a lauded gentleman, 2000 for every other gentleman or burghess, and 600 for any other inferior person. That persons who, either from the nature of the crime with which they are charged, or from their low circumstances, cannot procure bail, may not lie for ever in prison untried, it is lawful for every such prisoner to apply to the criminal judge, that his trial may be brought on.

Commitment.

The judge must, within 24 hours after such application, issue letters directed to messengers, for intimating to the prosecutor to fix a diet for the prisoner's trial, within 60 days after the intimation, under the pain of wrongous imprisonment: And if the prosecutor does not insist within that time, or if the trial is not finished in forty days more when carried on before the Justiciary, or in thirty when before any other judge; the prisoner is, upon a second application, setting forth that the legal time is elapsed, entitled to his freedom, under the same penalty.

43. Upon one's committing any of the grosser crimes, it is usual for a justice of the peace, sheriff, or other judge, to take a precognition of the facts, *i. e.* to examine those who were present at the criminal act, upon the special circumstances attending it, in order to know whether there is ground for a trial, and to serve as a direction to the prosecutor, how to set forth the facts in the libel; but the persons examined may insist to have their declarations cancelled before they give testimony at the trial. Justices of the peace, sheriffs, and magistrates of boroughs, are also authorised to receive informations, concerning crimes to be tried in the circuit-courts; which informations are to be transmitted to the justice-clerk 40 days before the sitting of the respective courts. To discourage groundless criminal trials, all prosecutors, where the defender was absolved, were condemned by statute, in costs, as they should be modified by the judge, and besides were subjected to a small fine, to be divided between the fisc and the defender: And where the king's advocate was the only pursuer, his informer was made liable. This sufficiently warrants the present practice of condemning vexatious prosecutors in a pecuniary mulct, though far exceeding the statutory sum.

Precognition.

44. The forms of trial upon criminal accusations, differ much from those observed in civil actions, if we except the case of such crimes as the court of session is competent to, and of lesser offences tried before inferior courts. The trial of crimes proceeds either upon indictment, which is sometimes used when the person to be tried is in prison; or by criminal letters issuing from the signet of the justiciary. In either case, the defender must be served with a full copy of the indictment or letters, and with a list of the witnesses to be brought against him, and of the persons who are to pass on the inquest, and 15 free days must intervene between his being so served and the day of appearance. When the trial proceeds upon criminal letters, the private prosecutor must give security, at raising the letters, that he will report them duly executed to the justiciary, in terms of 1535. c. 35.; and the defender, if he be not already in prison, is, by the letters, required to give caution, within a certain number of days after his citation, for his appearance upon the day fixed for his trial: And if he gives none within the days of the charge, he may be denounced rebel, which infers the forfeiture of his moveables.

Form of trial.

45. That part of the indictment, or of the criminal letters, which contains the ground of the charge against the defender, and the nature or degree of the punishment he ought to suffer, is called the *libel*. All libels must be special, setting forth the particular facts inferring the guilt, and the particular place where

Law of  
Scotland.

these facts were done. The time of committing the crime may be libelled in more general terms, with an alternative as to the month, or day of the month: but as it is not practicable, in most cases, to libel upon the precise circumstances of accession that may appear in proof, libels against accessories are sufficient, if they mention, in general, that the persons prosecuted are guilty art and part.

46. The defender in a criminal trial may raise letters of exculpation, for citing witnesses in proof of his defences against the libel, or of his objections against any of the jury or witnesses; which must be executed to the same day of appearance with that of the indictment or criminal letters.

Diets of  
appearance.

47. The diets of appearance, in the court of judicary, are peremptory: the criminal letters must be called on the very day to which the defender is cited; and hence, if no accuser appears, their effect is lost, *instantia perit*, and new letters must be raised. If the libel, or any of the executions, shall to the prosecutor appear informal, or if he be dissident of the proof, from the absconding of a necessary witness, the court will, upon a motion made by him, desert the diet *pro loco et tempore*; after which new letters become also necessary. A defender, who does not appear on the very day to which he is cited, is declared fugitive; in consequence of which, his single escheat falls. The defender, after his appearance in court, is called the *panel*.

48. The two things to be chiefly regarded in a criminal libel, are, 1. The relevancy of the facts, *i. e.* their sufficiency to infer the conclusion; 2. Their truth. The consideration of the first belongs to the judge of the court; that of the other, to the jury or assize. If the facts libelled be found irrelevant, the panel is dismissed from the bar; if relevant, the court remits the proof thereof to be determined by the jury; which must consist of 15 men picked out by the court from a greater number not exceeding 45, who have been all summoned, and given in list to the defender at serving him with a copy of the libel.

Probation  
of crimes.

49. Crimes cannot, like debts, be referred to the defender's oath; for no person is compellable to swear against himself, where his life, limb, liberty, or estate is concerned, nor even in crimes which infer infamy; because one's good name is, in right estimation, as valuable as his life. There is one exception however to this rule in trying the crime of usury, which may be proved by the usurer's own oath, notwithstanding the rule, *Nemo tenetur jurare in suam turpitudinem*. Crimes therefore are in the general case proveable only by the defender's free confession, or by writing, or by witnesses. No extrajudicial confession, unless it is adhered to by the panel in judgment, can be admitted as evidence.

Socii criminis.

50. All objections relevant against a witness in civil cases are also relevant in criminal. No witness is admitted, who may gain or lose by the event of the trial. *Socii criminis*, or associates in the same crime, are not admitted against one another, except either in crimes against the state, as treason; in occult crimes, where other witnesses cannot be had, as forgery; or in thefts or depredations committed in the Highlands. The testimony of the private party injured may be received against the panel, where the king's advocate

is the only prosecutor. if from the nature of the crime, there must needs be a penalty of witnesses, as in rape, robbery, &c.

Law of  
Scotland.

51. After all the witnesses have been examined in court, the jury are shut up in a room by themselves, where they must continue, excluded from all correspondence, till their verdict or judgment be subscribed by the foreman (or chancellor) and clerk; and according to this verdict the court pronounces sentence, either absolving or condemning. It is not necessary, by the law of Scotland, that a jury should be unanimous in finding a person guilty; the narrowest majority is as sufficient against the panel, as for him. Juries cannot be punished on account of an erroneous verdict, either for or against the panel.

Verdict  
assize.

52. Though the proper business of a jury be to inquire into the truth of the facts found relevant by the court, for which reason they are sometimes called the *inquest*; yet, in many cases, they judge also in matters of law or relevancy. Thus, though an objection against a witness should be repelled by the court, the jury are under no necessity to give more credit to his testimony than they think just: And in all trials of art and part, where special facts are not libelled, the jury, if they return a general verdict, are indeed judges not only of the truth, but of the relevancy of the facts that are sworn to by the witnesses. A general verdict, is that which finds in general terms, that the panel is guilty or not guilty, or that the libel or defences are proved or not proved. In a special verdict, the jury finds certain facts proved, the import of which is to be afterwards considered by the court.

Powers  
of a jury.

53. Criminal judges must now suspend for some time the execution of such sentences as affect life or limb, that so condemned criminals, whose cases deserve favour, may have access to apply to the king for mercy. No sentence of any court of judicature, south of the river Forth, importing either death or demembration, can be executed in less than 30 days; and, if north of it, in less than 40 days, after the date of the sentence. But corporal punishments, less than death or dismembering, *e. g.* whipping, pillory, &c. may be inflicted eight days after sentence on this side Forth, and twelve days after sentence beyond it.

Sentence

54. Crimes are extinguished, 1. By the death of the criminal: both because a dead person can make no defence, so that his trial is truly a judging upon the hearing of one side; and because, though his guilt should be ever so notorious, he is after death carried beyond the reach of human penalties: Such trials therefore can have no effect, but to punish the innocent heir, contrary to that most equitable rule, *Culpa tenet suos auctores*. 2. Crimes may be extinguished by a remission from the sovereign. But a remission, tho' it secures the delinquent from the public resentment, the exercise of which belongs to the crown, cannot cut off the party injured from his claim of damages, over which the crown has no prerogative. Whoever therefore founds upon a remission, is liable in damages, to the private prosecutor, in the same manner as if he had been tried and found guilty. Even general acts of indemnity passed in parliament, though they secure against such penalties as law inflicts upon the criminal merely *per modum pene*, yet do not against the payment of any pecuniary fine that is given by statute to

Extinction  
of crime

Law of  
Scotland.Law of  
Scotland.

to the party injured, nor against the demand of any claim competent to him in name of damages.

55. Lesser injuries, which cannot be properly said to affect the public peace, may be extinguished, either by the private party's expressly forgiving him, or by his being reconciled to the offender, after receiving the injury. Hence arises the rule, *Diffinitione tollitur injuria*. But where the offence is of a higher nature, the party injured, though he may pass from the prosecution, in so far as his private interest is concerned, cannot preclude the king's advocate, or procurator-fiscal, from insisting *ad vindictam publicam*.

prescrip-  
tion.

56. Crimes are also extinguished by prescription, which operates by the mere lapse of time, without any act either of the sovereign or of the private sufferer. Crimes prescribe in 20 years; but in particular crimes, the prescription is limited by statute to a shorter time. No person can be prosecuted upon the act against wrongous imprisonment, after three years. High treason, committed within his majesty's dominions, suffers likewise a triennial prescription, if indictment be not found against the traitor within that time. All actions

brought upon any penal statute made or to be made, where the penalty is appropriated to the crown, expire in two years after committing the offence; and where the penalty goes to the crown or other prosecutor, the prosecutor must sue within one year, and the crown within two years after the year ended. Certain crimes are, without the aid of any statute, extinguished by a shorter prescription than twenty years. By our old law, in the cases of rape, robbery, and hamefucken, the party injured was not heard after a silence of twenty-four hours; from a presumption, that persons could not be so grossly injured, without immediately complaining: And it is probable, that a prosecution for these crimes, if delayed for any considerable time, would be cast even at this day, or at least the punishment restricted. Lesser injuries suffer also a short prescription; law *presuming* forgiveness, from the nature of the offence, and the silence of the party. The particular space of time sufficient to establish this presumption must be determined by the judge, according to circumstances.

## L A W

Law-  
language.

*Law-Language.* In England all law-proceedings were formerly written, as indeed all public proceedings were, in Norman or law French, and even the arguments of the counsel and decisions of the court were in the same barbarous dialect. An evident and shameful badge, it must be owned, of tyranny and foreign servitude; being introduced under the auspices of William the Norman, and his sons: whereby the observation of the Roman satyrists was once more verified, that *Gallia caesibiles docuit facunda Britannos*. This continued till the reign of Edward III.; who, having employed his arms successfully in subduing the crown of France, thought it unbecoming the dignity of the victors to use any longer the language of a vanquished country. By a statute, therefore, passed in the 36th year of his reign, it was enacted, that for the future all pleas should be pleaded, thown, defended, answered, debated, and judged, in the English tongue; but be entered and enrolled in Latin: In like manner as Don Alonso X. king of Castile (the great-grandfather of our Edward III.) obliged his subjects to use the Castilian tongue in all legal proceedings; and as, in 1286, the German language was established in the courts of the empire. And perhaps, if our legislature had then directed that the writs themselves, which are mandates from the king to his subjects to perform certain acts or to appear at certain places, should have been framed in the English language, according to the rule of our ancient law, it had not been very improper. But the record or enrolment of those writs and the proceedings thereon, which was calculated for the benefit of posterity, was more serviceable (because more durable) in a dead and immutable language than in any flux or living one. The practisers, however, being used to the Norman language, and therefore imagining they could express their thoughts more aptly and more concisely in that than in any other, still continued to take their notes in law French; and of course, when those notes came to be published, under the denomination of *re-*

act's  
ment.

## L A W

*ports.* they were printed in that barbarous dialect; which, joined to the additional terrors of a Gothic black letter, has occasioned many a student to throw away his Plowden and Littleton, without venturing to attack a page of them. And yet in reality, upon a nearer acquaintance, they would have found nothing very formidable in the language; which differs in its grammar and orthography as much from the modern French, as the diction of Chaucer and Gower does from that of Addison and Pope. Besides, as the English and Norman languages were concurrently used by our ancestors for several centuries together, the two idioms have naturally assimilated, and mutually borrowed from each other: for which reason the grammatical construction of each is so very much the same, that I apprehend an Englishman (with a week's preparation) would understand the laws of Normandy, collected in their *grand coutumier*, as well, if not better, than a Frenchman bred within the walls of Paris.

Law-  
Language.

The Latin, which succeeded the French for the entry and enrolment of pleas, and which continued in use for four centuries, answers so nearly to the English (oftentimes word for word) that it is not at all surprising it should generally be imagined to be totally fabricated at home, with little more art or trouble than by adding Roman terminations to English words. Whereas in reality it is a very universal dialect, spread throughout all Europe at the irruption of the northern nations; and particularly accommodated and moulded to answer all the purposes of the lawyers with a peculiar exactness and precision. This is principally owing to the simplicity, or (if the reader pleases) the poverty and baldness of its texture, calculated to express the ideas of mankind just as they arise in the human mind, without any rhetorical flourishes, or perplexed ornaments of style: for it may be observed, that those laws and ordinances, of public as well as private communities, are generally the most easily understood, where strength and perspicuity, not harmony or elegance of

Law-  
Language.

expression, have been principally consulted in compiling them. These northern nations, or rather their legislators, though they resolved to make use of the Latin tongue in promulging their laws, as being more durable and more generally known to their conquered subjects than their own Teutonic dialects, yet (either through choice or necessity) have frequently intermixed therein some words of a Gothic original; which is, more or less, the case in every country of Europe, and therefore not to be imputed as any peculiar blemish in our English legal latinity. The truth is, what is generally denominated *law-Latin* is in reality a mere technical language, calculated for eternal duration, and easy to be apprehended both in present and future times; and on those accounts best suited to preserve those memorials which are intended for perpetual rules of action. The rude pyramids of Egypt have endured from the earliest ages, while the more modern and more elegant structures of Attica, Rome, and Palmyra, have sunk beneath the stroke of time.

As to the objection of locking up the law in a strange and unknown tongue, this is of little weight with regard to records; which few have occasion to read, but such as do, or ought to, understand the rudiments of Latin. And besides, it may be observed of the law-Latin, as the very ingenious Sir John Davis observes of the law-French, "that it is so very easy to be learned, that the meanest wit that ever came to the study of the law doth come to understand it almost perfectly in ten days without a reader."

It is true, indeed, that the many terms of art, with which the law abounds, are sufficiently harsh when Latinized (yet not more so than those of other sciences), and may, as Mr Selden observes, give offence "to some grammarians of squeamish stomachs, who would rather choose to live in ignorance of things the most useful and important, than to have their delicate ears wounded by the use of a word unknown to Cicero, Sallust, or the other writers of the Augustan age." Yet this is no more than must unavoidably happen when things of modern use, of which the Romans had no idea, and consequently no phrases to express them, come to be delivered in the Latin tongue. It would puzzle the most classical scholar to find an appellation, in his pure Latinity, for a constable, a record, or a deed of feoffment: it is therefore to be imputed as much to necessity as ignorance, that they were styled in our forensic dialect, *constabularius*, *recordum*, and *feoffamentum*. Thus again, another uncount word of our ancient laws (for I defend not the ridiculous barbarisms sometimes introduced by the ignorance of modern practicers), the substantive *murdrum*, or the verb *murdrare*, however harsh and unclassical it may seem, was necessarily framed to express a particular offence; since no other word in being, *occidere*, *interficere*, *necare*, or the like, was sufficient to express the intention of the criminal, or *quo animo* the act was perpetrated; and therefore by no means came up to the notion of murder at present entertained by a law; viz. a killing *with malice aforethought*.

A similar necessity to this produced a similar effect at Byzantium, when the Roman laws were turned into Greek for the use of the oriental empire: for, without any regard to Attic elegance, the lawyers of the imperial courts made no scruple to translate *fidei commif-*

Law-  
Language.

*sarios*, *φιδεικνημισσαρις*; *cubiculum*, *κυβικκειον*; *filium familiaris*, *παιδα-ραμικλης*; *repudium*, *ρεπυδιον*; *compromissum*, *κρηπρωμισσον*; *reverentia* *obsequium*, *ρβυρεντεια* *λαμωβ* *σεκκειον*; and the like. They studied more the exact and precise import of the words, than the neatness and delicacy of their cadence. And it may be suggested, that the terms of the law are not more numerous, more uncount, or more difficult to be explained by a teacher, than those of logic, physics, and the whole circle of Aristotle's philosophy; nay, even of the politer arts of architecture and its kindred studies, or the science of rhetoric itself. Sir Thomas More's famous legal question contains in it nothing more difficult, than the definition which in his time the philosophers currently gave of their *materia prima*, the groundwork of all natural knowledge; that it is *neque quid, neque quantum, neque quale, neque aliquid eorum quibus ens determinatur*; or its subsequent explanation by Adrian Heereboard, who assures us, that *materia prima non est corpus, neque per formam corporeitatis, neque per simplicem essentiam: est tamen ens, et quidem substantia, licet incompleta; habetque actum ex se entitativum, et simul est potentia subjeiva*. The law, therefore, with regard to its technical phrases, stands upon the same footing with other studies, and requests only the same indulgence.

This technical Latin continued in use from the time of its first introduction, till the subversion of our ancient constitution under Cromwell; when, among many other innovations in the law, some for the better and some for the worse, the language of our records was altered and turned into English. But, at the restoration of king Charles, this novelty was no longer countenanced; the practicers finding it very difficult to express themselves so concisely or significantly in any other language but the Latin. And thus it continued without any sensible inconvenience till about the year 1730, when it was again thought proper that the proceedings at law should be done into English, and it was accordingly so ordered by statute 4 Geo. II. c. 26. This was done, in order that the common people might have knowledge and understanding of what was alleged or done for and against them in the process and pleadings, the judgment and entries in cause. Which purpose it is doubtful how well it has answered; but there is reason to suspect, that the people are now, after many years experience, altogether as ignorant in matters of law as before. On the other hand, these inconveniences have already arisen from the alteration; that now many clerks and attornies are hardly able to read, much less to understand, a record even of so modern a date as the reign of George I. And it has much enhanced the expence of all legal proceedings: for since the practicers are confined (for the sake of the stamp-duties, which are thereby considerably increased) to write only a stated number of words in a sheet; and as the English language, through the multitude of its particles, is much more verbose than the Latin; it follows, that the number of sheets must be very much augmented by the change. The translation also of technical phrases, and the names of writs and other process, were found to be so very ridiculous (a writ of *nisi prius*, *quare impedit*, *fieri facias*, *habeas corpus*, and the rest, not being capable of an English dress with any degree of seriousness), that in two years time a new act was obliged to be

be

be made, 6 Geo. II. c. 14. which allows all technical words to continue in the usual language, and has thereby defeated every beneficial purpose of the former statute.

*Trial by Wager of Law, (vadiatio legis;)* a species of trial, in the English law, so called, as another species is styled "wager of battel," *vadiatio duelli*, (see **BATTEL**): because, as in the wager of battel, the defendant gave a pledge, gage, or *vadium*, or try the cause by battel; so here he was put in sureties or *vadios*, that at such a day he will make his law, that is, take the benefit which the law has allowed him, (see the article **TRIAL**). For our ancestors considered, that there were many cases where an innocent man, of good credit, might be overborne by a multitude of false witnesses; and therefore established this species of trial, by the oath of the defendant himself: for if he will absolutely swear himself not chargeable, and appears to be a person of reputation, he shall go free, and for ever acquitted of the debt, or other cause of action.

The manner of waging and making law is this. He that has waged, or given security, to make his law, brings with him into court eleven of his neighbours: a custom which we find particularly described so early as in the league between Alfred and Guthrun the Dane; for by the old Saxon constitution every man's credit in courts of law depended upon the opinion which his neighbours had of his veracity. The defendant then, standing at the end of the bar, is admonished by the judges of the nature and danger of a false oath. And if he still persists, he is to repeat this or the like oath: "Hear this, ye justices, that I do not owe unto Richard Jones the sum of ten pounds nor any penny thereof, in manner and form as the said Richard hath declared against me. So help me God." And thereupon his eleven neighbours or compurgators shall avow upon their oaths, that they believe in their consciences that he saith the truth; so that himself must be sworn *de fidelitate*, and the eleven *de credulitate*.

In the old Swedish or Gothic constitution, wager of law was not only permitted, as it is in *criminal* cases, unless the fact be extremely clear against the prisoner; but was also absolutely required, in many *civil* cases: which an author of their own very justly charges as being the source of frequent perjury. This, he tells us, was owing to the Popish ecclesiastics, who introduced this method of purgation from their canon law; and, having sown a plentiful crop of oaths in all judicial proceedings, reaped afterwards an ample harvest of perjuries: for perjuries were punished in part by pecuniary fines, payable to the coffers of the church. But with us in England wager of law is never required; and then only admitted, where an action is brought upon such matters as may be supposed to be privately transacted between the parties, and where in the defendant may be presumed to have made satisfaction without being able to prove it. Therefore it is only in actions of debt upon simple contract, or for amercement, in actions of detinue, and of account, where the debt may have been paid, the goods restored, or the account balanced, without any evidence of either. And by such wager of law (when admitted) the plaintiff is perpetually barred; for the law, in the simplicity of the ancient times, presumed that no one

would forswear himself for any worldly thing. Wager of law, however, lieth in a real action, where the tenant alleges he was not legally summoned to appear, as well as in mere personal contracts.

The wager of law was never permitted but where the defendant bore a fair and unrepachable character; and it was also confined to such cases where a debt might be supposed to be discharged, or satisfaction made in private, without any witnesses to attest it: and many other prudential restrictions accompanied this indulgence. But at length it was considered, that (even under all its restrictions) it threw too great a temptation in the way of indigent or profligate men: and therefore by degrees new remedies were devised, and new forms of action were introduced, wherein no defendant is at liberty to wage his law. So that now no plaintiff need at all apprehend any danger from the hardness of his debtor's conscience, unless he voluntarily chooses to rely on his adversary's veracity, by bringing an obsolete, instead of a modern, action. Therefore, one shall hardly hear at present of an action of *debt* brought upon a simple contract: that being supplied by an action of *trespass on the case* for the breach of a promise or *assumpsit*; wherein, though the specific debt cannot be recovered, yet damages may, equivalent to the specific debt. And, this being an action of *trespass*, no law can be waged therein. So, instead of an action of *detinue* to recover the very thing detained, an action of *trespass on the case* in *trover and conversion* is usually brought; wherein, though the horse or other specific chattel cannot be had, yet the defendant shall pay damages for the *conversion*, equal to the value of the chattel; and for this *trespass* also no wager of law is allowed. In the room of actions of *account*, a bill in equity is usually filed: wherein, though the defendant answers upon his oath, yet such oath is not conclusive to the plaintiff; but he may prove every article by other evidence, in contradiction to what the defendant has sworn. So that wager of law is quite out of use, being avoided by the mode of bringing the action; but still it is not out of force. And therefore, when a new statute inflicts a penalty, and gives an action of debt for recovering it, it is usual to add, "in which no wager of law shall be allowed:" otherwise an hardy delinquent might escape any penalty of the law, by swearing he had never incurred, or else had discharged it.

*Custom-House Laws.* The expedient of exacting duties on goods imported, or exported, has been adopted by every commercial nation in Europe. The attention of the British legislature has not been confined to the object of raising a revenue alone, but they have attempted by duties, exemptions, drawbacks, bounties, and other regulations, to direct the national trade into those channels that contribute most to the public benefit. And, in order to obtain every requisite information, all goods, exported or imported, whether liable to duty or not, are required to be entered at the respective custom houses; and, from these entries, accounts are regularly made up of the whole British trade, distinguishing the articles, their quantity and value, and the countries which supply or receive them.

The objects of the British legislature may be reduced to the following heads:

First,

Custom-  
house  
Laws.

First, To encourage the employment of British shipping and seamen, for the purpose of supplying our navy when public exigencies require.

Secondly, To increase the quantity of money in the nation, by prohibiting the exportation of British coin, by encouraging exportation, and discouraging importation, and by promoting agriculture, fisheries, and manufactures. For these purposes, it is penal to entice certain manufacturers abroad, or export the tools used in their manufactures; the exportation of raw materials is, in most instances, prohibited; and their importation permitted free from duty, and sometimes rewarded with a bounty. The exportation of some goods, manufactured to a certain length only (for example white cloth), is loaded with a duty, but permitted duty-free when the manufacture is carried to its full extent. The importation of rival manufactures is loaded with heavy duties, or absolutely prohibited. These restrictions are most severe towards nations with which the balance of trade is supposed against us, or which are considered as our most formidable rivals in power or commerce. Upon this principle the commerce with France, till lately, laboured under the heaviest restrictions.

Thirdly, To secure us plenty of necessaries for subsistence and manufacture, by discouraging the exportation of some articles that consume by length of time, and regulating the corn-trade according to the exigencies of the seasons.

Fourthly, To secure the trade of the colonies to the mother-country, and preserve a mutual intercourse, by encouraging the produce of their staple-commodities, and restraining their progress in these manufactures which they receive from us in exchange.

The foundation of our commercial regulations is the famous act of navigation, which was first enacted during the time of the commonwealth, and adopted by the first parliament after the restoration. The substance of this act, and subsequent amendments, is as follows.

1. Goods from Asia, Africa, and America, may not be imported, except in British ships duly navigated, or ships belonging to the British plantations; and they can only be imported from the place of their production or manufacture, or the port where they are usually first shipped for transportation. Goods of the Spanish or Portuguese plantations, imported from Spain and Portugal in British ships, bullion and some other inconsiderable articles are excepted.

The restriction on European goods is not universal, but extends to several of the bulkiest articles. Russian goods, malts, timber, boards, salt, pitch, resin, tar, hemp, flax, raisins, figs, prunes, olives, oil, corn, sugar, potashes, wine, and vinegar, may not be imported, except in ships belonging to Great Britain or Ireland, legally manned; nor Turkey goods and currants, except in ships British built; or in ships belonging to the country where these goods are produced or manufactured, or first shipped for exportation; and, if imported in foreign ships, they pay alien's duty.

In order to intitle a ship to the privileges of a British ship, it must be built in Britain, and belong entirely to British subjects; and the master, and three-fourths of the mariners, must be British subjects, except in case of death, or unavoidable accidents. In

N<sup>o</sup> 179.

time of war, the proportion of British mariners required is generally confined to one-fourth; and the same proportion only is required in the Greenland fishery.

No goods may be imported into, or exported from, the plantations in Asia, Africa, or America, except in ships built in Britain, Ireland, or the plantations, or prize-ships, manned by British subjects, duly registered, and legally navigated.

The following goods, enumerated in the act of navigation and subsequent acts, may not be exported from the plantations, except to some other plantation or to Britain: Tobacco, cotton-wool, indigo, ginger, fustic, and other dyeing wood, molasses, hemp, copper-ore, beaver-skins and other furs, pitch, tar, turpentine, masts, yards, and boltsprits, coffee, pymento, cocoa-nuts, whale-fins, raw silk, pot and pearl ashes. Rice and sugar were formerly comprehended in this list, but their exportation is now permitted under certain restrictions.

Iron may not be imported to Europe, except to Ireland; and none of the non-enumerated may be imported to any country north of Cape Finisterre, except the Bay of Biscay and Ireland.

2. For the more effectual prevention of smuggling, no goods may be imported in vessels belonging to British subjects, and no wine, in any vessel whatever, unless the master have a manifest on board, containing the name, measure, and built of the ship, the place to which it belongs, and a distinct enumeration of the goods on board, and places where they were laden. If the ship be cleared from any place under his Majesty's dominions, the manifest must be attested by the chief officer of the customs, or chief magistrate, who is required to transmit a copy thereof to the place of destination. Ship-masters must deliver copies of this manifest to the first custom-house officer who goes on board within four leagues of the shore, and also to the first who goes on board within the limits of any port, and must deliver the original manifest to the custom-house at their arrival, and make report of their cargo upon oath. If the report disagree with the manifest, or either disagree with the cargo on board, the ship-master is liable in the penalty of L. 200. The proprietors of the goods must enter them, and pay the duties within 20 days; otherwise they may be carried to the custom-house, and sold by auction, if not relieved within six months; and the overplus of the value, after paying duty and charges, paid to the proprietors.

3. The importation of cattle, beef, mutton, and pork, except from Ireland, woollen cloths, malt, and various articles of hardware, cutlery, and earthen ware, is prohibited: Also the following goods from Germany and the Netherlands; olive oil, pitch, tar, potashes, rosin, salt, tobacco, wines, except Rhenish wine, and Hungary wines from Hamburgh.

4. The importation of various other goods is restricted by particular regulations respecting the time and place of importation, the packages, the burden of the ship, the requisition of a licence, and other circumstances.

To guard more effectually against clandestine trade, the importation of some articles is only permitted in ships of a certain burden, whose operations are not easily concealed. Spirits must be imported in ships of

Custom-  
house  
Laws.

**Law.** 100 tons or upwards, except rum, and spirits of British plantations, which are only restricted to 70 tons; wine, 60 tons; tea, tobacco, and snuff, 50 tons; salt, 40 tons. Wine, spirits, and tobacco are also restricted in respect of the packages in which they may be imported.

5. Diamonds and precious stones, flax, flax seed, linen-rags, beaver-wool, wool for clothiers, linen-yarn unbleached, and most drugs used in dyeing, may be imported duty free.

6. All goods imported are liable to duties, except such as are expressly exempted. The revenue of customs is of great antiquity in Britain, but was remodelled at the restoration of Charles II. A subsidy of tonnage on wines, and of poundage, or 1 s. per pound value of other goods, was granted during the king's life, and, after several prolongations, rendered perpetual. A book of rates was composed for ascertaining these values; and articles not rated paid duty according to the value, as affirmed upon oath by the importer. If the goods be valued too low by the importer, the custom-house officer may seize them, upon paying to the proprietor the value he swore to, and 10 per cent. for profit; such goods to be sold, and the overplus paid into the customs. Various additional duties have been imposed; some on all goods, some on particular kinds; some according to the rates, some unconnected with the rates; some with an allowance of certain abatements, some without any allowance; the greater part to be paid down in ready money, and a few for which security may be granted; often with variations, according to the ship's place and circumstances of importation. The number of branches amounted to upwards of 50; and sometimes more than 10 were chargeable on the same articles. By this means, the revenue of the customs has be-

come a subject of much intricacy. The inconveniences which this gave rise to are now removed by the consolidation act, which appoints one fixed duty for each article free from fractions, instead of the various branches to which they were formerly subject.

7. Goods of most kinds may be exported duty free when regularly entered; and those that have paid duty on importation are generally intitled to drawback of part, sometimes of the whole, when re-exported within three years, upon certificate that the duties were paid on importation, and oath of their identity. In some cases, a bounty is given on manufactured goods, when the materials from which they are manufactured have paid duty on importation; and manufactures subject to excise, have generally the whole or part of the excise duties returned.

8. The following goods are prohibited to be exported; white-ashes, horns, unwrought hides of black-cattle, tallow, coin, brads, copper, engines for knitting stockings, tools for cotton, linen, woollen, silk, iron, and steel manufactures; wool, woolfells, woollen yarn, fullers earth, fulling clay, and tobacco pipe-clay.

9. The object of the laws respecting the corn trade is to encourage agriculture, by not only permitting the free exportation, but rewarding it with a bounty when the prices are low, and checking the importation by a heavy duty; and, to prevent scarcity, by prohibiting the exportation when the prices are high, and permitting importation at an easy duty. Various temporary laws have been enacted for these purposes, and sometimes other expedients employed in times of scarcity, such as prohibiting the distillery from corn, and manufacture of starch: And by a permanent law 1773, the low duties and bounties are regulated as under:

	Low duty.		Bounty.
Wheat at or above	48 s. per qr	6 d.	under 44 s. 5 s.
Rye, -	32 s.	3 d.	28 s. 3 s.
Pease and beans,	32 s.	3 d.	28 s. no bounty.
Oats, -	16 s.	2 d.	14 s. 2 s.
Barley, -	24 s.	2 d.	22 s. 2 s. 6 d.

The duties, when the prices are lower than in the first column, amount to a prohibition. When the prices are higher than in the column prefixed to the bounty, no exportation is permitted. When oats are under the bounty price, oatmeal is intitled to a bounty of 2 s. 6 d. per quarter.

10. Bounties are allowed on the exportation of refined sugar, sail-cloth, linen under limited prices, silk stuffs of British manufacture, cordage, spirits when barley is under 24 s. beef, pork, and the following kinds of fish, salmon, herrings, pilchards, cod, ling, flake, and sprats.

Various other bounties are allowed for the encouragement of our fisheries. Ships from 150 to 300 tons employed in the Greenland whal-fishery, and conforming to the regulations prescribed, are allowed 30 s. per ton. Vessels employed in the herring-fishery receive 20 s. per ton, besides a bounty on the herrings caught and cured, amounting in some cases to 4 s. per barrel. Other bounties are granted to a limited number of the most successful vessels employed in the her-

ring and Newfoundland fisheries, and in the southern whale-fishery.

It is unnecessary and impracticable, in this place, to enter into a full detail of our custom-house laws. Indeed, all that can be admitted into a work of this kind, must convey but very imperfect information; and even that little becomes useless in a short time from alterations in the law. We have therefore only marked the general outlines in the present article; which, however, will be sufficient to enable the reader to judge of the principles upon which the British legislature has acted. How far the means employed have contributed to the ends proposed, and how far the ends themselves are always wise; or whether a trade encumbered by fewer restrictions would not prove more extensive and beneficial; has been a subject of much discussion: and of late a more liberal system has been embraced in our commercial treaty with France, and in other regulations.

*Mercantile Laws.* The laws relating to commercial and maritime affairs approach nearer to uniformity

through the different countries of Europe, than those on other subjects. Some of the fundamental regulations have been taken from the Roman law; others have been suggested by experience, during the progress of commerce; and the whole have been gradually reduced to a system, and adopted into the laws of trading nations, but with some local varieties and exceptions.

The British legislature has enacted many statutes respecting commerce; yet the greater part of our mercantile law is to be collected from the decisions of our courts of justice, founded on the custom of merchants. A proof of such custom, where no direct statute interferes, determines the controversy, and becomes a precedent for regulating like cases afterwards. The existence of a custom not formerly recognized, is, in England, determined by a jury of merchants.

The most common mercantile contracts are those between buyer and seller; between factor and employer; between partners; between the owners, masters, mariners, and freighters of ships; between insurers and the owners of the subject insured; and between the parties concerned in transacting bills of exchange. See FACTORAGE, SALE, PARTNERSHIP, INSURANCE, BILL, &c. and the next article.

*Maritime Laws.* The most ancient system of maritime laws is that of Rhodes, which was in force during the time of the Grecian empire, and afterwards incorporated into the Roman law. Although, in some parts, not applicable to the present state of trade, and, in others, now hardly intelligible, it contains the groundwork of the most equitable and beneficial rules observed in modern commerce. A like system was set forth by Richard I. of England, called the *Statutes of Oleron*; and another, by the town of Wisby, in the island of Gotland. From these systems, improved and enlarged in the course of time, our general maritime law is derived. The jurisdiction of matters purely maritime belongs, in England, to the court of admiralty, which proceeds on the civil law; but their proceedings are subject to the controul, and their decisions to the review, of the superior courts.

We shall here consider the obligations which subsist between the masters or owners of ships, the freighters, and the furnishers of provisions or repairs.

1. *Masters and Freighters.* A charter-party is a contract between the master and freighters, in which the ship and voyage is described, and the time and conditions of performing it are ascertained.

The freight is most frequently determined for the whole voyage, without respect to time. Sometimes it depends on the time.

In the former case, it is either fixed at a certain sum for the whole cargo; or so much *per ton*, barrel-bulk, or other weight or measure; or so much *per cent.* on the value of the cargo. This last is common on goods sent to America; and the invoices are produced to ascertain the value.

The burden of the ship is generally mentioned in the contract, in this manner, *one hundred tons, or thereabouts*; and the number mentioned ought not to differ above 5 tons, at most, from the exact measure. If a certain sum be agreed on for the freight of the ship, it must all be paid, although the ship, when measured, should prove less, unless the burden be *warranted*. If the

ship be freighted for *transporting* cattle, or slaves, at so much a head, and some of them die on the passage, freight is only due for such as are delivered alive; but, if for *lading* them, it is due for all that were put on board.

When a whole ship is freighted, if the master suffers any other goods besides those of the freighter to be put on board, he is liable for damages.

It is common to mention the number of days that the ship shall continue at each port to load or unload. The expression used is, *work weather days*; to signify, that Sundays, holidays, and days when the weather stops the work, are not reckoned. If the ship be detained longer, a daily allowance is often agreed on; in name of *demurrage*.

If the voyage be completed in terms of the agreement, without any misfortune, the master has a right to demand payment of the freight before he delivers the goods. But if the safe delivery be prevented by any fault or accident, the parties are liable, according to the following rules.

If the merchant do not load the ship within the time agreed on, the master may engage with another, and recover damages.

If the merchant load the ship, and recal it after it has set sail, he must pay the whole freight; but if he unload it before it sets sail, he is liable for damages only.

If a merchant loads goods which it is not lawful to export, and the ship be prevented from proceeding on that account, he must pay the freight notwithstanding.

If the shipmaster be not ready to proceed on the voyage at the time agreed on, the merchant may load the whole, or part of the cargo, on board another ship, and recover damages; but chance, or notorious accident, by the marine law, releases the master from damages.

If an embargo be laid on the ship before it sails, the charter-party is dissolved, and the merchant pays the expence of loading and unloading; but if the embargo be only for a short limited time, the voyage shall be performed when it expires, and neither party is liable for damages.

If the shipmaster sails to any other port than that agreed on, without necessity, he is liable for damages; if through necessity, he must sail to the port agreed on, at his own expence.

If a ship be taken by the enemy, and retaken or ransomed, the charter-party continues in force.

If the master transfer the goods from his own ship to another, without necessity, and they perish, he is liable for the value; but if his own ship be in imminent danger, the goods may be put on board another ship at the risk of the owner.

If a ship be freighted out and home, and a sum agreed on for the whole voyage, nothing is due till it return; and the whole is lost if the ship be lost on the return.

If a certain sum be specified for the homeward voyage, it is due, although the factor abroad should have no goods to send home.

In the case of a ship freighted to Madeira, Carolina, and home, a particular freight fixed for the homeward voyage, and an option reserved for the factor at

**Law.** Carolina to decline it, unless the ship arrived before 1st of March: the shipmaster, foreseeing he could not arrive there within that time, and might be disappointed of a freight, did not go there at all. He was found liable in damages, as the obligation was absolute on his part, and conditional only on the other.

If the goods be damaged without fault of the ship or master, the owner is not obliged to receive them and pay freight, but he must either receive the whole, or abandon the whole; he cannot choose those that are in best order, and reject the others. If the goods be damaged through the insufficiency of the ship, the master is liable for the same; but, if it be owing to stress of weather, he is not accountable. It is customary for shipmasters, when they suspect damage, to take a *protest against wind and weather* at their arrival. But as this is the declaration of a party, it does not bear credit, unless supported by collateral circumstances.

If part of the goods be thrown over-board, or taken by the enemy, the part delivered pays freight.

The shipmaster is accountable for all the goods received on board, by himself or mariners, unless they perish by the act of God, or of the king's enemies.

Shipmasters are not liable for leakage on liquors; nor accountable for the contents of packages, unless packed and delivered in their presence.

Upon a principle of equity, that the labourer is worthy of his hire, differences arising with regard to freight, when the case is doubtful, ought rather to be determined in favour of the shipmaster.

2. *Ship and Owners with Creditors.* When debts are contracted for provisions or repairs to a ship, or arise from a failure in any of the above mentioned obligations, the ship and tackle, and the owners, are liable for the debt, as well as the master.

By the mercantile law, the owners are liable in all cases, without limitation; but by statute, they are not liable for embezzlement beyond their value of ship, tackle, and freight.

A shipmaster may pledge his ship for necessary repairs during a voyage; and this hypothecation is implied by the maritime law when such debts are contracted. This regulation is necessary, and is therefore adopted by all commercial nations; for, otherwise, the master might not find credit for necessary repairs, and the ship might be lost. If repairs be made at different places, the last are preferable.

The relief against the ship is competent to the court of admiralty in England, only when repairs are furnished during the course of a voyage; for the necessity of the case extends no further. If a ship be repaired at home (*e. g.* upon the river Thames), the creditor is only intitled to relief at common law.

The creditor may sue either the masters or owners; but if he undertook the work on the special promise of the one, the other is not liable.

If the master buys provisions on credit, the owners are liable for the debt, though they have given him money to pay them.

If a ship be mortgaged, and afterwards lost at sea, the owners must pay the debt; for the mortgage is only an additional security, though there be no express words to that purpose in the covenant.

**Law.** If a ship be taken by the enemy, and ransomed, the owners are liable to pay the ransom, though the ransomer die in the hands of the captors.

3. *Owners of ship and cargo with each other.* There is a mutual obligation which subsists between all the owners of a ship and cargo. In time of danger, it is often necessary to incur a certain loss of part for the greater security of the rest; to cut a cable; to lighten the ship, by throwing part of the goods overboard; to run it ashore; or the like; and as it is unreasonable that the owners of the thing exposed for the common safety should bear the whole loss, it is defrayed by an equal contribution among the proprietors of the ship, cargo, and freight. This is the famous *Lex Rhodia de jactu*, and is now called a *general average*.

The custom of valuing goods which contribute to a general average, is not uniform in all places. They are generally valued at the price they yield at the port of destination, charges deducted; and goods thrown overboard are valued at the price they would have yielded there. Sailors wages, cloaths and money belonging to passengers, and goods belonging to the king, pay no general average; but proprietors of gold and silver, in case of goods being thrown overboard, contribute to the full extent of their interest.

The following particulars are charged as general average: Damage sustained in an engagement with the enemy; attendance on the wounded, and rewards given for service in time of danger, or gratuities to the widows or children of the slain; ransom; goods given to the enemy in the nature of ransom; charges of bringing the ship to a place of safety when in danger from the enemy, or waiting for convoy; charges of quarantine; goods thrown overboard; masts or rigging cut; holes cut in the ship to clear it of water; pilotage, when a lake is sprung; damage, when voluntarily run aground, and expence of bringing it afloat; goods lost by being put in a lighter; the long boat lost in lightening the ship in time of danger; hire of cables and anchors; charges of laying in ballast, victualing, and guarding the ship when detained; charges at law, in reclaiming the ship and cargo; interest and commission on all these disbursements.

Though goods put on board a lighter, and lost, are charged as a general average; yet if the lighter be saved, and the ship with the rest of the goods be lost, the goods in the lighter belong to their respective proprietors, without being liable to any contribution.

If part of the goods be plundered by a pirate, the proprietor or shipmaster is not intitled to any contribution.

The essential circumstances that constitute a general average are these; the loss must be the effect of a voluntary action; and the object of that action the common safety of the whole. Quarantine, which is allowed, seems not to fall within this description.

5. *Wrecks.* See WRECK.

6. *Impress.* See IMPRESSING.

7. *Insurance.* See INSURANCE.

*Game-Laws.* See the article GAME.

Sir William Blackstone, treating of the alterations in our laws, and mentioning franchises granted of chase and free warren, as well to preserve the breed of animals,

mals, as to indulge the subject, adds, "From a similar principle to which, though the forest laws are now mitigated, and by degrees grown entirely obsolete; yet from this root has sprung a *bastard slip*, known by the name of the *game law*, now arrived to and wantoning in its highest vigour: both founded upon the same unreasonable notion of permanent property in wild creatures; and both productive of the same tyranny to the commons; but with this difference, that the forest-laws established only one mighty hunter throughout the land; *the game laws have raised a little Nimrod in every manor*. And in one respect the ancient law was much less unreasonable than the modern; for the king's grant of a chase or free warren, might kill game in every part of his franchise; but now, though a freeholder of less than L. 100 a year is forbidden to kill partridge upon his own estate, yet nobody else (not even the lord of the manor, unless he hath a grant of free warren) can do it without committing a trespass and subjecting himself to an action.

Under the article GAME, the destroying such beasts and fowls as are ranked under that denomination, was observed (upon the old principles of the forest-law) to be a trespass and offence in all persons alike, who have not authority from the crown to kill game (which is royal property) by the grant of either a free warren, or at least a manor of their own. But the laws called the *game-laws* have also inflicted additional punishments (chiefly pecuniary) on persons guilty of this general offence, unless they be people of such rank or fortune as is therein particularly specified. All persons, therefore, of what property or distinction soever, that kill game out of their own territories, or even upon their own estates, without the king's licence expressed by the grant of a franchise, are guilty of the first original offence of encroaching on the royal prerogative. And those indigent persons who do so, without having such rank or fortune as is generally called a *qualification*, are guilty, not only of the original offence, but of the aggravations also created by the statutes for preserving the game: which aggravations are so severely punished, and those punishments so implacably inflicted, that the offence against the king is seldom thought of, provided the miserable delinquent can make his peace with the lord of the manor. The only rational footing upon which this offence, thus aggravated, can be considered as a crime, is, that in low and indigent persons it promotes idleness, and takes them away from their proper employments and callings: which is an offence against the public police and economy of the commonwealth.

The statutes for preserving the game are many and various, and not a little obscure and intricate; it being remarked, that in one statute only, 5 Ann. c. 14. there is false grammar in no fewer than six places, besides other mistakes: the occasion of which, or what denomination of persons were probably the penners of these statutes, it is unnecessary here to inquire. It may be in general sufficient to observe, that the *qualifications* for killing game, as they are usually called, or more properly the exemptions from the penalties inflicted by the statute law, are, 1. The having a freehold estate of L. 100 *per annum*; there being fifty times the property required to enable a man to kill a partridge, as to vote for a knight of the shire. 2. A

leasehold for 99 years of L. 150 *per annum*. 3. Being the son and heir apparent of an esquire (a very loose and vague description) or person of superior degree. 4. Being the owner or keeper of a forest, park, chase, or warren. For unqualified persons transgressing these laws, by killing game, keeping engines for that purpose, or even having game in their custody, or for persons (however qualified) that kill game, or have it in possession, at unseasonable times of the year, or unseasonable hours of the day or night, on Sundays or on Christmas day, there are various penalties assigned, corporal and pecuniary, by different statutes (after-mentioned), on any of which, but only on one at a time, the justices may convict in a summary way, or (in most of them) prosecutions may be carried on at the assizes. And, lastly, by statute 28 Geo. II. c. 12. no person, however qualified to kill, may make merchandise of this valuable privilege, by selling or exposing to sale any game, on pain of like forfeiture as if he had no qualification.

The statutes above referred to are as follow. No person shall take pheasants or partridges with engines in another man's ground, without licence, on pain of 10l. stat. 11 Hen. VII. c. 13. If any person shall take or kill any pheasants or partridges with any net in the night-time, they shall forfeit 20s. for every pheasant, and 10s. for every partridge taken; and hunting with spaniels in standing corn, incurs a forfeiture of 40s. 23 Eliz. c. 10. Those who kill any pheasant, partridge, duck, heron, hare, or other game, are liable to a forfeiture of 20s. for every fowl and hare; and selling, or buying to sell again, any hare, pheasant, &c. the forfeiture is 10s. for each hare, &c. 1 Jac. I. c. 17. Also pheasants or partridges are not to be taken between the first of July and the last of August, on pain of imprisonment for a month, unless the offenders pay 20s. for every pheasant, &c. killed: and constables, having a justice of peace's warrant, may search for game and nets, in the possession of persons not qualified by law to kill game or to keep such nets, 7 Jac. I. c. 11. Constables, by a warrant of a justice of peace, are to search houses of suspected persons for game; and if any game be found upon them, and they do not give a good account how they came by the same, they shall forfeit for every hare, pheasant, or partridge, not under 5s. nor exceeding 20s. And inferior tradesmen hunting, &c. are subject to the penalties of the act, and may likewise be sued for trespass. If officers of the army or soldiers kill game without leave, they forfeit 5l. an officer, and 10s. a soldier; 4 & 5 W. and M. c. 23. Higglers, chapmen, carriers, inn-keepers, victuallers, &c. having in their custody hare, pheasant, partridge, heath game, &c. (except sent by some person qualified to kill game), shall forfeit for every hare and fowl 5l. to be levied by distress and sale of their goods, being proved by one witness, before a justice; and for want of distress shall be committed to the house of correction for three months: one moiety of the forfeiture to the informer, and the other to the poor. And selling game, or offering the same to sale, incurs the like penalty; wherein hare and other game found in a shop, &c. is adjudged an exposing to sale: killing hares in the night is liable to the same penalties: and if any persons shall drive wild-fowls with nets, between the first day of July

Law.

and the first of September, they shall forfeit 5s. for every fowl; 5 Ann. c. 14. 9 Ann. c. 25. If any unqualified person shall keep a gun, he shall forfeit 10l.; and persons being qualified may take guns from those that are not, and break them; 21 & 22 Car. II. c. 25. and 33 H. VIII. c. 6. One justice of peace, upon examination and proof of the offence, may commit the offender till he hath paid the forfeiture of 10 l. And persons, not qualified by law, keeping dogs, nets, or other engines to kill game, being convicted thereof before a justice of peace, shall forfeit 5l. or be sent to the house of correction for three months; and the dogs, game, &c. shall be taken from them, by the statute 5 Ann. If a person hunt upon the ground of another, such other person cannot justify killing of his dogs, as appears by 2 Roll. Abr. 567. But it was otherwise adjudged Mich. 33 Car. II. in C. B. 2 Cro. 44. and see 3. Lev. xxviii. In actions of debt, *qui tam*, &c. by a common informer on the statute 5 Ann. for 15l. wherein the plaintiff declared on two several counts, one for 10l. for killing two partridges, the other for 5l. for keeping an engine to destroy the game, not being qualified, &c. the plaintiff had a verdict for 5l. only: this action was brought by virtue of the stat. 8 Geo. I. See stat. 9 Geo. I. c. 22. See likewise 24 Geo. II. c. 34. for the better preservation of the game in Scotland. By the stat. 26 Geo. II. c. 2. all suits and actions brought by virtue of stat. 8 Geo. I. c. — for the recovery of any pecuniary penalty, or sum of money, for offences committed against any law for the better preservation of the game, shall be brought before the end of the second term after the offence committed.

By 28 Geo. II. c. 12. persons selling, or exposing to sale, any game, are liable to the penalties inflicted by 5 Ann. c. 14. on higglers, &c. offering game to sale: and game found in the house or possession of a poulterer, salesman, fishmonger, cook, or pastry-cook, is deemed exposing thereof to sale.

By 2 Geo. III. c. 19. after the 1st June 1762, no person may take, kill, buy or sell, or have in his custody, any partridge, between 12th February and 1st September, or pheasant between 1st February and 1st October, or heath-fowl between 1st January and 20th August, or grouse between 1st December and 25th July, in any year; pheasants taken in their proper season, and kept in mews, or breeding places, excepted: and persons offending in any of the cases aforesaid, forfeit 5l. per bird, to the prosecutor, to be recovered, with full costs, in any of the courts at Westminster. By this act, likewise, the whole of the pecuniary penalties under the 8 Geo. I. c. 19. may be sued for, and recovered to the sole use of the prosecutor, with double costs; and no part thereof to go to the poor of the parish.

By 5 George III. c. 14. persons convicted of entering warrens in the night-time, and taking or killing coney there, or aiding or assisting therein, may be punished by transportation, or by whipping, fine, or imprisonment. Persons convicted on this act, not liable to be convicted under any former act. This act does not extend to the destroying coney in the day-time, on the sea and river-banks in the county of Lincoln, &c. No satisfaction to be made for damages occasioned by entry, unless they exceed 1s. It may not be improper to mention an act lately made,

and not yet repealed, viz. 10 Geo III. c. 19. for preservation of the game, which shows the importance of the object. It is thereby enacted, That if any person kill any hare, &c. between sun setting and sun rising, or use any gun, &c. for destroying game, shall for the first offence be imprisoned for any time not exceeding six nor less than three months: if guilty of a second offence, after conviction of a first, to be imprisoned for any time not exceeding 12 months nor less than six; and shall also, within three days after the time of his commitment, either for the first or for any other offence, be once publicly whipped.

By 25 George III. c. 50. and 31 George III. c. 21. every person in Great Britain (the royal family excepted), who shall, after July 1 1785, use any dog, gun, net, or other engine, for the taking or destruction of game (not as acting as gamekeeper), shall deliver in a paper or account in writing, containing his name and place of abode, to the clerk of the peace or his deputy, and annually take out a certificate thereof; and every such certificate shall be charged with a stamp-duty of L. 2, 2 s. (and an additional L. 1, 1 s. by 31 Geo. III. c. 21.) making in the whole L. 3, 3 s.—Every deputation of a gamekeeper shall be registered with the clerk of the peace, and such gamekeeper shall annually take out a certificate thereof; which certificate shall be charged with a stamp duty of 10s. 6d. (and an additional 10s. 6d. by 31 Geo. III. c. 21), making in the whole L. 1, 1 s.—The duties to be under the management of the commissioners of the stamp-office.

From and after the said 1st of July 1785, the clerk of the peace shall annually deliver to persons requiring the same, duly stamped, a certificate or licence according to the form therein mentioned, for which he shall be intitled to demand 1s. for his trouble; and on refusal or neglect to deliver the same, forfeit L. 20.—Every certificate to bear date the day when issued, and to continue in force until the 1st day of July then following, on penalty of 20l.

After the 1st day of July 1785, any person that shall use any greyhound, hound, pointer, setting-dog, spaniel, or other dog, or any gun, net, or engine, for taking or killing of game, without a certificate, is liable to the penalty of 20 l. And if any gamekeeper shall, for the space of 20 days after the said 1st day of July, or if any gamekeeper thereafter to be appointed shall, for the space of 20 days next after such appointment, neglect or refuse to register his deputation and take out a certificate thereof, he is liable to the penalty of 20l.

The clerks of the peace are to transmit to the stamp-office in London alphabetical lists of the certificates granted in every year before the 1st day of August, under penalty of 20 l. These lists are to be kept at the stamp-office in London, and there to be inspected on payment of 1s.: And the commissioners of the stamp duties are, once or oftener in every year, as soon as such lists are transmitted to them, to cause the same to be published in the newspapers circulating in each county, or such public paper as they shall think most proper.

If any gamekeeper, who shall have registered his deputation, and taken out a certificate thereof, shall be changed, and a new gamekeeper appointed in his stead, the first certificate is declared null and void.

Law.

Law.

and the person acting under the same after notice, is liable to the penalty of 20*l*. And any person in pursuit of game, who shall refuse to produce his certificate, or to tell his name and place of abode, or shall give in any false or fictitious name or place of abode to any person requiring the same, who shall have obtained a certificate, is liable to the penalty of 50*l*.

The certificates are not to authorise persons to kill game at any time prohibited by law, nor to give any person any right to kill game, unless such person shall be qualified so to do by the laws now in being, but shall be liable to the same penalties as if this act had not passed. [So that though by this act qualified and unqualified persons are equally included, yet having a certificate does not give an unqualified person a right to kill game: the point of right still stands upon the former acts of parliament; and any unqualified person killing game without a certificate, is not only liable to the penalty inflicted by this act, but also to all the

*Military Law.* See MILITARY and MARINE.

former penalties relating to the killing of game, &c.]

Witnesses refusing to appear on justices' summonses, or appearing and refusing to give evidence, forfeit 10*l*. The certificates obtained under deputations, not to be given in evidence for killing of game by a gamekeeper out of the manor, in respect of which such deputation or appointment was given and made. Persons counterfeiting stamps to suffer death as felons.

Penalties exceeding 20*l*. are to be recovered in any of his majesty's courts of record at Westminster; and penalties not exceeding 20*l*. are recoverable before two justices, and may be levied by distress. The whole of the penalties go to the informer.

LAW (John), the famous projector, was the eldest son of a goldsmith burgher in Edinburgh, by Elizabeth Campbell heiress of Laurieston near that city; and was born about the year 1681. He was bred to no business; but possessed great abilities, and a very fertile invention. He had the address, when but a very young man, to recommend himself to the king's ministers in Scotland to arrange and fit the revenue accounts, which were in great disorder at the time of settling the equivalent before the union of the kingdoms. The attention of the Scottish parliament being also turned to the contrivance of some means for supplying the kingdom with money, and facilitating the circulation of specie, for want of which the industry of Scotland languished; he proposed to them, for these purposes, the establishment of a bank of a particular kind, which he seems to have imagined might issue paper to the amount of the whole value of all the lands in the country: but this scheme the parliament by no means thought it expedient to adopt.

His father dying about the year 1704, Law succeeded to the small estate of Laurieston; but the rents being insufficient for his expences, he had recourse to gaming. He was tall and graceful in his person, and much addicted to gallantry and finery; and giving a sort of ton at Edinburgh, he went commonly by the name of *Beau Law*. He was forced to fly his country, however, in the midst of his career, in consequence of having fought a duel and killed his antagonist; and in some of the French literary gazettes it is said that he run off with a married lady. In his

Law.

flight from justice he visited Italy; and was banished from Venice and Genoa, because he contrived to drain the youth of these cities of their money, by his superiority in calculation, that is, by being a cheat and a sharper. He wandered over all Italy, living on the event of the most singular bets and wagers, which seemed to be advantageous to those who were curious after novelty; but which were always of the most certain success with regard to him. He arrived at Turin, and proposed his system to the duke of Savoy, who saw at once, that, by deceiving his subjects, he would in a short time have the whole money of the kingdom in his possession: but that sagacious prince asking him how his subjects were to pay their taxes when all their money should be gone, Law was disconcerted, not expecting such a question.

Having been banished from Italy, and thus repulsed at Turin, Law proceeded to Paris, where he was already known as a projector. In the lifetime of Louis XIV. he had transmitted his schemes to Desmarest and to Chamillard, who had rejected them as dangerous innovations. He now proposed them to the Duc d'Orleans, who desired Noailles to examine them, to be as favourable in his report as possible, and to remark such of them as were practicable. Noailles called in the assistance of several merchants and bankers who were averse to the system. Law then proposed the establishment of a bank, composed of a company, with a stock of six millions. Such an institution promised to be very advantageous to commerce. An arret of the 2d March 1716 established this bank, by authority, in favour of Law and his associates; two hundred thousand shares were instituted of one thousand livres each; and Law deposited in it to the value of two or threethousand crowns which he had accumulated in Italy, by gaming or otherwise. This establishment very much displeased the bankers, because at the beginning business was transacted here at a very small premium, which the old financiers had charged very highly. Many people had at first little confidence in this bank; but when it was found that the payments were made with quickness and punctuality, they began to prefer its notes to ready money. In consequence of this, shares rose to more than 20 times their original value; and in 1719 their valuation was more than 80 times the amount of all the current specie in the kingdom. But the following year, this great fabric of false credit fell to the ground, and almost overthrew the French government, ruining some thousands of families; and it is remarkable, that the same desperate game was played by the South Sea directors in England, in the same fatal year, 1720. Law being exiled as soon as the credit of his projects began to fail, retired to Venice, where he died in 1729.

The principles upon which Law's original scheme was founded, are explained by himself in *A Discourse concerning Money and Trade*, which he published in Scotland where (as we have seen) he first proposed it. "The splendid but visionary ideas which are set forth in that and some other works upon the same principles (Dr Adam Smith observe), still continue to make an impression upon many people, and have perhaps in part contributed to that excess of banking which has of late been complained of both in Scotland and in other places."

LAW (Edmund), D. D. bishop of Carlisle, was born in the parish of Cartmel in Lancashire, in the year 1703. His father, who was a clergyman, held a small chapel in that neighbourhood; but the family had been situated at Alkham, in the county of Westmoreland. He was educated for some time at Carmel school, afterwards at the free grammar-school at Kendal; from which he went, very well instructed in the learning of grammar schools, to St John's college in Cambridge.

Soon after taking his first degree, he was elected fellow of Christ-college in that university. During his residence in which college, he became known to the public by a Translation of Archbishop King's Essay upon the Origin of Evil, with copious notes; in which many metaphysical subjects, curious and interesting in their own nature, are treated of with great ingenuity, learning, and novelty. To this work was prefixed, under the name of a Preliminary Dissertation, a very valuable piece, written by the reverend Mr Gay of Sidney college. Our bishop always spoke of this gentleman in terms of the greatest respect. In the Bible and in the writings of Mr Locke, no man, he used to say, was so well versed.

He also, whilst at Christ-college, undertook and went through a very laborious part in preparing for the press an edition of Stephens's Thesaurus. His acquaintance, during this his first residence in the university, was principally with Dr Waterland, the learned master of Magdalen college; Dr Jortin, a name known to every scholar; and Dr Taylor, the editor of Demosthenes.

In the year 1737 he was presented by the university to the living of Graystock in the county of Cumberland, a rectory of about 300 l. a-year. The advowson of this benefice belonged to the family of Howards of Graystock, but devolved to the university, for this turn, by virtue of an act of parliament, which transfers to these two bodies the nomination to such benefices as appertain, at the time of the vacancy, to the patronage of a Roman catholic. The right, however, of the university was contested; and it was not till after a law-suit of two years continuance that Mr Law was settled in his living. Soon after this, he married Mary the daughter of John Christian, Esq; of Unerigg, in the county of Cumberland; a lady whose character is remembered with tenderness and esteem by all who knew her.

In 1743, he was promoted by Sir George Fleming, bishop of Carlisle, to the archdeaconry of that diocese; and in 1746 went from Graystock to reside at Salkeld, a pleasant village upon the banks of the river Eden, the rectory of which is annexed to the archdeaconry. Mr Law was not one of those who lose and forget themselves in the country. During his residence at Salkeld, he published Considerations on the Theory of Religion: to which were subjoined, Reflections on the Life and Character of Christ; and an Appendix concerning the use of the words Soul and Spirit in holy scripture, and the state of the dead there described.

Dr Keene held at this time, with the bishopric of Chester, the mastership of Peterhouse in Cambridge. Desiring to leave the university, he procured Dr Law to be elected to succeed him in that station. This took place in the year 1756; in which year Dr Law

resigned his archdeaconry in favour of Mr Eyre, a brother-in-law of Dr Keene. Two years before this, he had proceeded to his degree of Doctor in Divinity; in his public exercise for which, he defended the doctrine of what is usually called the "sleep of the soul."

About the year 1760, he was appointed head librarian of the university; a situation which, as it procured an easy and quick access to books, was peculiarly agreeable to his taste and habits. Some time after this, he was also appointed casuistical professor. In the year 1762, he suffered an irreparable loss by the death of his lady; a loss in itself every way afflicting, and rendered more so by the situation of his family, which then consisted of eleven children, many of them very young. Some years afterwards, he received several preferments, which were rather honourable expressions of regard from his friends than of much advantage to his fortune.

By Dr Cornwallis, then bishop of Litchfield, afterwards archbishop of Canterbury, who had been his pupil at Christ-college, he was appointed to the archdeaconry of Staffordshire, and to a prebend in the church of Litchfield. By his old acquaintance Dr Green, bishop of Lincoln, he was made a prebendary of that church. But in the year 1767, by the intervention of the duke of Newcastle, to whose interest, in the memorable contest for the high-stewardship of the university, he had adhered in opposition to some temptations, he obtained a stall in the church of Durham. The year after this, the duke of Grafton, who had a short time before been elected chancellor of the university, recommended the master of Peterhouse to his majesty for the bishopric of Carlisle. This recommendation was made not only without solicitation on his part or that of his friends, but without his knowledge, until the duke's intention in his favour was signified to him by the archbishop.

In or about the year 1777, our bishop gave to the public a handsome edition, in three volumes quarto, of the Works of Mr Locke, with a Life of the Author, and a Preface. Mr Locke's writings and character he held in the highest esteem, and seems to have drawn from them many of his own principles: He was a disciple of that school. About the same time he published a tract, which engaged some attention in the controversy concerning subscription; and he published new editions of his two principal works, with considerable additions, and some alterations.

Dr Law held the see of Carlisle almost 19 years; during which time he twice only omitted spending the summer months in his diocese at the bishop's residence at Rose-Castle; a situation with which he was much pleased, not only on account of the natural beauty of the place, but because it restored him to the country, in which he had spent the best part of his life. In the year 1777 he paid this visit in a state of great weakness and exhaustion; and died at Rose about a month after his arrival there, on the 14th day of August, and in the 84th year of his age.

The life of the bishop of Carlisle was a life of incessant reading and thought, almost entirely directed to metaphysical and religious inquiries. Besides the works already mentioned, he published, in 1734 or 1735, a very ingenious *Inquiry into the Ideas of Space, Time, &c.* in which he combats the opinions of Dr Clarke

and his adherents on these subjects: but the tenet by which his name and writings are principally distinguished, is "that Jesus Christ, at his second coming, will, by an act of his power, restore to life and consciousness the dead of the human species, who, by their own nature, and without this interposition, would remain in the state of insensibility to which the death brought upon mankind by the sin of Adam had reduced them." He interpreted literally that saying of St Paul, 1 Cor. xv. 21. "As by man came death, by man came also the resurrection of the dead." This opinion had no other effect upon his own mind than to increase his reverence for Christianity, and for its divine Founder. He retained it, as he did his other speculative opinions, without laying, as many are wont to do, an extravagant stress upon their importance, and without pretending to more certainty than the subject allowed of. No man formed his own conclusions with more freedom, or treated those of others with greater candour and equity. He never quarrelled with any person for differing from him, or considered that difference as a sufficient reason for questioning any man's sincerity, or judging meanly of his understanding. He was zealously attached to religious liberty, because he thought that it leads to truth; yet from his heart he loved peace. But he did not perceive any repugnancy in these two things. There was nothing in his elevation to his bishopric which he spoke of with more pleasure, than its being a proof that decent freedom of inquiry was not discouraged.

He was a man of great softness of manners, and of the mildest and most tranquil disposition. His voice was never raised above its ordinary pitch. His countenance seemed never to have been ruffled; it preserved the same kind and composed aspect, truly indicating the calmness and benignity of his temper. He had an utter dislike of large and mixed companies. Next to his books, his chief satisfaction was in the serious conversation of a literary companion, or in the company of a few friends. In this sort of society he would open his mind with great unreservedness, and with a peculiar turn and sprightliness of expression. His person was low, but well formed; his complexion fair and delicate. Except occasional interruptions by the gout, he had for the greatest part of his life enjoyed good health; and when not confined by that distemper, was full of motion and activity. About nine years before his death, he was greatly enfeebled by a severe attack of the gout in his stomach; and a short time after that, lost the use of one of his legs. Notwithstanding his fondness for exercise, he resigned himself to this change, not only without complaint, but without any sensible diminution of his cheerfulness and good-humour. His fault (for we are not writing a panegyric) was the general fault of retired and studious characters, too great a degree of inaction and facility in his public station. The modesty, or rather bashfulness of his nature, together with an extreme unwillingness to give pain, rendered him sometimes less firm and efficient in the administration of authority than was requisite. But it is the condition of human morality. There is an opposition between some virtues which seldom permits them to subsist together in perfection.

The bishop was interred with due solemnity in his cathedral church, in which a handsome monument is

erected to his memory, bearing the following inscription:

Columnæ hujus sepultus est ad pedem  
EDMUNDUS LAW, S. T. P.  
per XIX fere annos hujusce ecclesiæ Episcopus.  
In evangelica veritate exquirenda,  
et vindicanda,  
ad extremum usque senectutem,  
operam navavit indefessam.  
Quo autem studio et affectu veritatem,  
eodem et libertatem Christianam coluit;  
Religionem simplicem et incorruptam,  
nisi salva libertate,  
flare non posse arbitratus.  
Obiit Aug. XIV. MDCCLXXXVII.  
Ætat. LXXXIV.

LAWBURROWS, in Scots law. See LAW, Part III. N<sup>o</sup> clxxxiii. 16.

LAWENBURG, Duchy, a territory of Germany, in the circle of Lower Saxony, bounded by the duchy of Holstein on the north and west, by the duchy of Mecklenburg on the east, and by the duchy of Lunenburg, from which it is separated by the river Elbe, on the west; being about 85 miles long, and 20 broad. The chief towns are Lawenburg, Mollen, Wittenburg, and Ratzeburg. It belongs to the elector of Hanover.

LAWENBURG, a city of Germany in the circle of Lower Saxony, and capital of a duchy of the same name. It is a small but populous town, situated on the Elbe, under the brow of a very high hill, from whence there is a delightful prospect over the adjacent country. It has a castle on an eminence, and is convenient for trade. E. Long. 10. 51. N. Lat. 53. 36.

LAWENBURG, a town of Germany in Farther Pomerania, and the chief place of a territory of the same name, belonging to the elector of Brandenburg.

LAWERS, an eminent engraver, who flourished about the middle of the 16th century. He was a native of Flanders, and probably studied under Paul Pontius, whose style of engraving he frequently imitated. He possessed a considerable share of merit; but was by no means equal to that great master, either in the excellency of the handling of the graver, or knowledge of drawing. He engraved from several painters; but his best works are from the pictures of Rubens.

LAWES (Henry), a celebrated musician, and the Purcell of his time. He was a servant to Charles I. in his public and private music, and set some of the works of almost every poet of eminence in that reign. The Comus of Milton, and several of the lyrics of Waller, were set by him; and both these poets have done him honour in their verses. He composed a considerable number of psalm-tunes in the *Cantica Sacra*, for three voices and an organ; and many more of his compositions are to be seen in a work called *Select airs and dialogues*; also in the *Treasury of music*, and the *Musical companion*. He died in 1662.

LAWES (William), was brother to the former, and a most capital musician. He made above 30 several sorts of music for voices and instruments; nor was there any instrument then in use, but he composed to it as aptly as if he had studied that alone. In the music school at Oxford are two large manuscript volumes

*Lawless*  
||  
*Lawrence.*  
of his works in score for various instruments. He was a commissary under general Gerard in the civil war, and, to the great regret of the king, was killed at the siege of Chester in 1645.

is navigable as far as Quebec, which is above 400 miles; but beyond Montreal it is so full of shoals and rocks, that it will not admit large vessels without danger, unless the channel be very well known. *Lawsonia*  
||  
*Lay*

**LAWLESS COURT**, a court said to be held annually on King's Hill at Rochford in Essex, on the Wednesday morning after Michaelmas day at cock-crow, where they whisper, and have no candle, nor any pen and ink, but only a gale. Persons who owe suit, or service, and do not appear, forfeit double their rent every hour they are missing.

This servile attendance, Cambden informs us, was imposed on the tenants for conspiring at the like unseasonable hour to raise a commotion. The court belongs to the honour of Raleigh, and to the earl of Warwick; and is called *lawless*, from its being held at an unlawful hour.

**LAWINGEN**, a town of Germany, in the circle of Suabia; formerly imperial, but now subject to the duke of Neuburg. Here the duke of Bavaria, in 1704, fortified his camp to defend his country against the British forces and their allies commanded by the duke of Marlborough, who forced their intrenchments. It is seated on the Danube, in E. Long. 10. 29. N. Lat. 38. 32.

**LAWN**, a spacious plain in a park, or adjoining to a noble seat. As to the dimensions of a lawn: In a large park, it should be as extensive as the ground will permit; and, if possible, it should never be less than 50 acres: but in gardens of a moderate extent, a lawn of 10 acres is sufficient; and in those of the largest size, 15 acres. The best situation for a lawn is in the front of the house: and here, if the house front the east, it will be extremely convenient; but the most desirable aspect for a lawn is that of the south-east. As to the figure of the lawn, some recommend an exact square, others an oblong square, some an oval, and others a circular figure: but neither of these are to be regarded. It ought to be so contrived, as to suit the ground; and there should be trees planted for shade on the boundaries of the lawn, so the sides may be broken by irregular plantations of trees, which, if there are not some good prospects beyond the lawn, should bound it on every side, and be brought round pretty near to each end of the house. If in these plantations round the lawn, the trees are placed irregularly, some breaking much forwarder on the lawn than others, and not crowded too close together, they will make a better appearance than any regular plantations can possibly do; and if there are variety of trees, properly disposed, they will have a good effect; but only those which make a fine appearance, and grow large, straight, and handsome, should be admitted here. The most proper trees for this purpose, are the elm, oak, chestnut, and beech; and if there are some clumps of ever green trees intermixed with the others, they will add to the beauty of the whole, especially in the winter-season; the best sorts for this purpose are lord Weymouth's pine, and the silver and spruce firs.

**LAWN**, in manufactures, a fine sort of linen, remarkable for being used in the sleeves of bishops.

**LAWRENCE** (St), the largest river in north America, proceeding from the lake Ontario, from which it runs a course of 700 miles to the Atlantic ocean. It

*Lay-Brothers*, among the Romanists, those pious but illiterate persons, who devote themselves in some convent to the service of the religious. They wear a

Layers  
||  
Lazuli.

Lazuli.

different habit from that of the religious; but never enter into the choir, nor are present at the chapters; nor do they make any other vow except of constancy and obedience. In the nunneries there are also lay-sisters.

*Lay-Man*, one who follows a secular employment, and has not entered into holy orders.

LAYERS, in gardening, are tender shoots or twigs of trees, laid or buried in the ground, till, having struck root, they are separated from the parent-tree, and become distinct plants.—The propagating trees by *layers* is done in the following manner: The branches of the trees are to be slit a little way, and laid under the mould for about half a foot; the ground should be first made very light, and after they are laid they should be gently watered. If they will not remain easily in the position they are put in, they must be pegged down with wooden hooks: the best season for doing this is, for ever-greens, toward the end of August, and, for other trees, in the beginning of February. If they are found to have taken root, they are to be cut off from the main plant the succeeding winter, and planted out. If the branch is too high from the ground, a tub of earth is to be raised to a proper height for it. Some pare off the rhind, and others twist the branch before they lay it, but this is not necessary. The end of the layer should be about a foot out of the ground; and the branch may be either tied tight round with a wire, or cut upwards from a joint, or cut round for an inch or two at the place, and it is a good method to pierce several holes through it with an awl above the part tied with the wire.

LAYING THE LAND, in navigation, the state of motion which increases the distance from the coast, so as to make it appear lower and smaller, a circumstance which evidently arises from the intervening convexity of the surface of the sea. It is used in contradiction to *raising* the land, which is produced by the opposite motion of approach towards it. See LAND.

LAZAR-HOUSE, or LAZARETTO, a public building, in the nature of an hospital, to receive the poor, and those afflicted with contagious distempers. In some places, lazarettos are appointed for the performance of quarantine; in which case, those are obliged to be confined in them who are suspected to have come from places infected with the plague.

LAYSTOFF, or LOWESTOFF, a town of Suffolk 117 miles from London, seems to hang over the sea, and its chief business is fishing for cod in the north sea, and for herring, mackarel, and sprats, at home. The church being three furlongs off, there is a chapel in the place. Having been a part of the ancient demesnes of the crown, this town has a charter and a seal, by the former of which the inhabitants are exempted from serving on juries. Here is a market on Wednesday, and two fairs in the year. Some take this to be the most eastern part of Britain.

LAZULI, or *Lapis Lazuli*, a species of zeolite belonging to the class of argillaceous earths. See CLAY, n<sup>o</sup> 7. It is of a blue colour. That which is of a fine blue inclining to purple, has obtained the name of Oriental; but the pale blue is less esteemed. It is frequently variegated with yellow, and white shining veins and speckles; which the common people

take for gold and silver, though they are in truth nothing but marcasites. The lapis lazuli has the following properties: 1. It retains its blue colour for a long time in a calcining heat; but changes at last to a brown. 2. It melts easily in the fire to a white frothy slag; which puffs up greatly when exposed to the flame of a blow-pipe; but with a strong heat in a covered vessel, it becomes clear and solid, with blue clouds in it. 3. It does not ferment with acids; but, if boiled with oil of vitriol, it slowly dissolves, and loses its blue colour. On adding a solution of fixed alkali, it precipitates a white earth, which being scorified with borax, yields a silver coloured regulus, varying in bigness according to the different specimens of the stone. 4. By scorification with lead, it yields silver, sometimes in the quantity of two ounces to a hundred weight of the stone. 5. Oil of vitriol discovers the presence of silver more certainly in lapis lazuli than spirit of nitre. 6. On adding spirit of sal ammoniac to any solution either of crude or calcined lapis lazuli, no blue colour is produced; a certain proof that it does not depend on copper; which is further confirmed by the fixity of the blue colour in the fire, and the colour of the slag or glass. 7. It is somewhat harder than the other kinds of zeolite, but does not approach to the hardness of quartz or other siliceous stones in general; for the purest and finest lapis lazuli may be rubbed into a white powder by means of steel, though it takes a polish like marble. 8. When perfectly calcined, it is a little attracted by the loadstone; and when scorified with lead, the slag becomes of a greenish colour, not like that produced by copper, but such as is always produced by iron mixed with a calcareous substance.

Mongez informs us, that some of the parts of lapis lazuli will strike fire with steel. According to Cronstedt, it is seldom found pure; but generally full of veins of quartz, limestone, and marcasite: but for the experiments by which the above mentioned qualities were determined, the purest pieces were picked; such as had been examined through a magnifying glass, and judged as free from heterogeneous mixture as possible. Our author expresses a wish that such as are in possession of any quantity of the stone would make farther experiments, in order to determine what substance it is which produces the blue colour so constant in the fire, since it cannot depend either on copper or iron; for though these metals, on certain occasions, give a blue colour, yet they never produce any other but what instantly vanishes in the fire, and is destroyed by means of an alkali. "What is mentioned in several books (says he) can by no means be objected here; since in these processes the silver employed is mixed with copper and other substances which contain a volatile alkali, whereby the blue colour is produced."

In the year 1761 M. Margraaf published some experiments on the lapis lazuli; in which he agrees in a great measure with Cronstedt. According to him, the lapis lazuli does not contain any copper; but he found in it a calcareous and gypseous substance, though he took care to pick out the very purest bits he could find. Engestrom, however, is of opinion, that the calcareous substance is not essential to lapis lazuli; as Cronstedt says, that the lapis lazuli he tried did not ferment with acids. He farther mentions, that when dissolved in any of the mineral acids, it always turned

blade. them into a jelly. Some of his experiments also seem to indicate, that all kinds of lapis lazuli do not contain silver, though many of them do.

The lapis lazuli is found in many parts of the world; but that of Asia and Africa is much superior both in beauty and real value to the Bohemian and German kind, which is too often fold in its place.

LEACHLADE, a town of Gloucestershire, 12 miles east from Cirencester, 29 miles from Gloucester, and 60 from London. The river Thames waters it on the south and east sides, and divides it from Wiltshire and Berkshire. The Leach runs through the north side of the parish. The Thames river is navigable for barges of 50 tons burden, but want of water one part of the year makes the navigation very uncertain. Here is a small market on Tuesday, and two fairs in the year. The church is a large handsome building, with double aisles, supported by two rows of fluted pillars.

LEAD, one of the imperfect metals, of a dull white colour inclining to blue, the least ductile, the least elastic, and the least sonorous, of the whole, possesses a considerable degree of specific gravity, reaching from 11.3 to 11.479. It is found;

1. *Native.* Cronstedt and some other mineralogists have doubted whether native lead was ever found in the earth, but the matter is now decided by innumerable testimonies. It appears from the Philosophical Transactions for 1772, that some small pieces of native lead were found in the county of Monmouth in Wales. It is said also to be found in the Vivarrais in France. Bomare mentions a curious specimen of native lead kept in the collection of the abbé Nolin at Paris, that had been found in the lead mines of *Pompean*, near Rennes in Brittany. It was very malleable, could be cut with a knife without crumbling, and easily melted over the flame of a candle. It weighed about two pounds; was imbedded in an earthy lead ore of a reddish colour; and had a slaty vein that went through the middle of it.

2. *Lead spar*, is sometimes transparent, but generally opaque, and crystallized in regular forms of a laminar or striated texture. Lead ochre, or native ceruss, is the same substance, but in a loose form, or indurated and shapeless. Sometimes it is found in a silky form. Both contain some iron, calcareous earth, and clay; and both grow red or yellowish when heated. They effervesce with acids, and afford from 60 to 80 or 90 per cent. of lead. They are found in Brittany, Lorraine, Germany, and England.

M. Sage, of the royal academy of Paris, pretended, that the white lead ore from Poulawen in the county of Bretagne in France, was mineralized by the marine acid; but his mistake was detected by the commissioners of that academy. This ore, according to the same academicians, is composed of striated crystals, of a whitish pale red or grey colour. There is a lead ore of this kind sometimes grey and sometimes yellow, which is very heavy. Its structure is either lamellated or fibrous, and its laminar can hardly be separated; but it is friable, and may be cut with a knife. Sometimes it is crystallized; and sometimes its fibres are extremely thin, semitransparent, and have a silky look. They effervesce with acids, deprecitate in the fire, and seem to lose the aerial acid by which the lead is mineralized.

The sparry lead ore has often a semitransparency like the sparry duor; its crystals being generally terminated by hexahedral prisms, or cylindrical columns, striated, and apparently composed of a great number of filaments. These sparry crystals are always found in the same places with the galenas or sulphurated lead ores; and seem to be formed from their decomposition after the loss of their sulphur; so that it is not uncommon to find galenas which are beginning to pass into a state of white lead. There is a black ore of lead, which may be supposed to be in an intermediate state betwixt the white lead ore and galena, as it seems to be a true white lead tinged by the hepatic vapours of the sulphur on its parting from the galena. There is also a green transparent lead, having a more or less yellowish cast. It frequently has no regular form, and appears like a kind of moss. When this green ore is crystallized, it consists of hexahedral truncated prisms, terminated by six-sided pyramids, either entire or truncated near the base. Professor Brunnich tells us, that the green and the black lead ores from Saxony, and the Hungarian blue ores, are prismatic. According to Kirwan and Mongez, the green lead ores are either crystallized in needles as in Brittany, or in a loose powder as in Saxony; but mostly adhering to and investing quartz. They owe their green colour to iron, seldom containing any copper, and are very rare. Brunnich mentions a sapphire-coloured ore once found among some white lead spar at Wendish Lemen. It was easily melted by the blow-pipe. Natural red-lead or minium has been found in some Siberian mines. It is found either crystallized, or in shapeless masses, or in powder, in which it agrees with the brown or yellow ores. Dr J. R. Forster brought some of this crystallized red lead ore from Russia. The crystals were cubical, and the colour seemed rather pale. The red Siberian ores are perfectly rhombic; those from Bohemia have a cubical or rhomboidal form. Sulphur and arsenic have been found in the red ones, but the others have not been sufficiently investigated. Most of them effervesce with acids.

3. *Arsenical lead spar.* Cronstedt says that he tried an ore of this kind from an unknown place in Germany, and found that no metal could be melted from it by means of the blow-pipe as could be done by other spars; but by doing it in a crucible, that part of the arsenic which did not fly off was likewise reduced, and found in the form of grains dispersed, and forced into the lead. Another ore similar to this, and which likewise was not easily reduced by means of the blow-pipe, always shot into polygonal, but chiefly hexagonal crystals, after being melted, having shining surfaces. Professor Brunnich observes, that these ores effervesce with acids, and contain 40 per cent. of lead.

4. The *bley-glanz* of the Germans contains lead mineralized with sulphur alone, and of this there are two or three varieties. At Villach in Austria there is said to be found a potters lead-ore containing not the smallest portion of silver.

5. *Lead mineralized by the vitriolic acid*, is generally in the form of a white mass, soluble in 18 times its quantity of water. Sometimes it is blackish, and crystallized in very long strice, or in friable stalactites; this last variety effloresces in the air, and is converted

**Lead.** Into a true vitriol of lead. According to Mr Kirwan, it does not effervesce nor is soluble in other acids, but may be reduced by laying it on a burning coal. It originates from the decomposition of sulphurated lead ores. Dr Withering informs us, that it is found in great quantity in the island of Anglesey; but united to iron, and not reducible by the blow-pipe or charcoal.

6. *Lead mineralized by the phosphoric acid*, was lately discovered by Mr Gahn. It is of a greenish, yellow, or reddish colour, and does effervesce with acids. After solution in nitrous acid, the lead may be precipitated from this ore by the vitriolic acid. An hundred grains of lead are produced from 137 of this precipitate washed and dried. The decanted liquor evaporated to dryness affords the phosphoric acid, from which the inflammable compound may be produced by distillation with charcoal. Seven ounces of this lead ore from the neighbourhood of Friburg, treated in the manner just mentioned, yielded by distillation 144 grains of phosphorus. A compound similar to this ore may be obtained by mixing pure phosphoric acid (that is, such as is combined with the volatile alkali, for the fissile alkali in the microcosmic salt hinders the operation) with red lead.

7. *Galena, or potters ore*, in which the metal is mineralized by sulphurated silver. According to Mr Kirwan it is the most common of all the lead ores, of a bluish dark lead colour, formed of cubes of a moderate size, or in grains of a cubic figure, whose corners have been cut off; its texture is lamellar, and its hardness varying in different specimens. That which is formed into grains is supposed to be the richest in silver; but even this contains only about one or one and a half *per cent.* that is, about 12 or 18 ounces *per quintal*; and the poorest not above 60 grains. Ores that yield about half an ounce of silver *per quintal* are barely worth the extracting. Different specimens also vary in the quantity of sulphur they contain, from 15 to 25 *per cent.* and that which contains the least is in some degree malleable. The proportion of iron in this ore is very small, but the lead is from 60 to 85 *per cent.* M. Monnet asserts, that galena is insoluble in the nitrous acid; but Dr Watson has shown, that it is completely dissolved by the acid when diluted. The specific gravity of galena is from 7.000 to 7.780. It yields a yellow slag when melted.

M. Fourcroy distinguishes several varieties of this ore. 1. Cubic galena, the cubes of which are of various sizes, and found either single or in groups; it is often found with the angles truncated, and is common at Freyberg. 2. In masses, without any regular configuration; very common at St Maire. 3. With large facets. It does not compose regular crystals, but is entirely formed of large laminae. 4. With small facets, appearing like mica, composed of white and very brilliant scales. It is called white silver ore, because it contains a considerable quantity of that metal. 5. Small grained galena, so called because it has a very close grain. It is likewise very rich in silver, and is found with the foregoing ore. No galena, excepting that of Carinthia, is known to be without silver; but it has been observed, that those which afford the most silver have the smallest facets. 6. Galena crystallized like lead spar, in hexagonal prisms or cylindrical columns,

contains little silver, and seems to be merely spathose lead, mineralized without having lost its form. Crystals of pure spathose lead entirely covered with a very fine galena, are sometimes found in the same piece, together with others which are changed into galena throughout.

8. *Antimonial lead-ore*, in which the metal is mineralized by sulphur with silver and regulus of antimony. This is of the same colour with galena, but its texture is different, being radiated, filamentous, or striated. When heated, it yields a white smoke; and it affords from 40 to 50 *per cent.* of lead, and from half an ounce to two ounces of silver *per quintal*.

9. *Pyritous lead-ore*, mineralized by sulphur with silver and a large proportion of iron. This is of a brown or yellowish colour; of an oblong or stalactitical form; friable; and of a lamellar, striated, or loose texture; affording 18 or 20 *per cent.* of lead at most, which is obtained merely by melting it, the iron detaining the sulphur. It is only a mixture of galena with the brown pyrites.

10. *Lead mineralized by arsenic*, was lately discovered in Siberia. It is of a pale colour externally, but internally of a deep red. It is for the most part crystallized in rhomboidal parallelepipeds, or irregular pyramids. Lehman says, that it contains sulphur, arsenic, and about 34 *per cent.* of lead; and Mr Pallas says, that it contains some silver also. It was found near Catherineburg in Siberia; and Lehman says, that on being reduced to powder, it resembled the best carmine. A specimen examined by Mongez was of a yellow-greenish colour, and was found among quartz in the same country, and contained some arsenic. Both these, according to M. Magellan, may be easily reduced by means of a blow-pipe.

11. *Stony or sandy lead-ores*, consist either of the calciform or the galena kind, intimately mixed and diffused through stones and earth, chiefly of the calcareous or barytic genus. To this species Mongez refers the earthy lead ore, falsely called *native massicot*, found in the lead mines of Pompean in Brittany, principally in solid pieces. These are either yellowish or grey; they appear bright like glass when broken, and effervesce with acids; whence it appears that the ore contains fixed air. Sometimes it is mixed with clay.

12. The mine of Morgenstern at Freyberg has a peculiar variety of lead-ore containing silver, and which deserves to be noticed on account of its yellowish-brown colour, and likewise on account of its singular figure, which consists of slender cylinders. Sometimes it is found in dendritical forms, like the *knit cobalt*.

Most of the ores of lead contain silver; and those kinds of galena which do not, are very scarce. In Hungary and Transylvania, the lead ore contains a quantity of gold as well as silver. Sometimes the potters ores are found so poor in silver, that it is not worth the expence of extracting it. These, when free from mixtures of the rock, are employed without any fusion to glaze earthen ware; and a considerable trade is carried on in the Mediterranean with such ores from the mines of Sardinia and France.

Lead, exposed to heat, melts long before it is ignited. By a strong heat it becomes volatile, and flies off in vapours. If suffered to cool very slowly, and the melted portion be poured off from that which is be-

**Lead.** come solid, it is found to be crystallized in quadrangular pyramids. When melted with the contact of air, it soon becomes covered with a grey dull pellicle, which by proper management is converted into minium, as explained under the article CHEMISTRY; and by this operation it becomes heavier by about ten pounds in the hundred, though it is said that at Nuremberg it gains twice as much. By too much heat minium loses its beautiful red colour, and assumes that of a pale yellow: by a heat still more violent, it melts into a transparent glass, so fusible, that it penetrates the crucible and escapes. But if one part of sand be added to three parts of calx of lead, the sand melts, by the assistance of the calx, into a beautiful amber-coloured glass. With two parts of lead and one of sand, it resembles a topaz. A similar quantity of the calx of lead, added to common glass, does not alter its transparency, but gives it a greater degree of weight, and more especially a kind of unctuousness, which renders it capable of being cut and polished more easily without breaking. This glass is very proper for making achromatic lenses; but is subject to veins, and to have a gelatinous appearance. "The English (says M. Fourcroy) call it *flint glass*; our workmen find great difficulty in selecting pieces of any considerable magnitude, exempt from striae, in that which is imported from England." This great imperfection seems, in Macquer's opinion, to depend on the principles of the glass not being uniformly combined: for that purpose it is necessary that it should be kept in fusion for a long time; but as the lead would by that means be dissipated, the flint-glass would lose a part of its density and unctuousness, which are its chief merit.

M. Magellan tells us, that it is the purest calx of lead called *minium*, made immediately from the metal, and the most pure quartzous sand, with pure mineral alkali, or rather with good nitre, that produce, when properly melted, the best flint-glass. The greater the proportion of red-lead, the heavier is the glass, and of course its refraction the greater; an essential requisite for such glass as is employed for the lenses of achromatic telescopes. It must, however, be observed, that glass made with lead has the defect of being of unequal density, for want of a perfect mixture of all its parts; so that it is extremely difficult to find pieces of a few inches diameter among hundred weights of this glass, that shall be quite free from filaments and striae. By chance the late Mr Dollond procured a pot of pure flint-glass, from which he made the admirable triple object lenses of three feet and a half focus, which have been so much admired; but no such other glass has yet been found, though very considerable premiums have been offered for the method of producing the best kind of glass for optical instruments.

All the calces of lead, especially minium, have a great attraction for fixed air. If therefore we should desire a calx of lead in perfect purity, it must be kept defended from the contact of air, or slightly calcined before it is used, in order to separate the fixed air it may have absorbed. When exposed to the air, it tarnishes in proportion to the dampness of the air, and contracts a white rust, which is not a pure calx, but combined with the fixed air imbibed from the atmosphere. It is not altered by pure water; and there-

fore we must conclude, that the whitish crust with which the internal part of lead pipes through which water runs is usually covered, must be owing to the saline substances contained in the water.

"All the phenomena of the calcination of lead (says M. Magellan), and of its reduction to the metallic state, show that it has the smallest adhesion to phlogiston; as appears by the simple action of fire, which separates both, whilst their attraction is equally quick in its reduction to the metallic state. A common water, which owes its colour to red-lead, by being burned in the flame of a candle, immediately exhibits pure globules or little drops of the metal. The readiness with which lead parts with its phlogiston is shown by the curious experiment lately performed at Paris by Doctor Luzuriagu pensioner of the court of Spain. He put four ounces of lead-shot wetted with water into a pint bottle filled with atmospheric air, and closed with a stopple. Having shaken it several times, a black powder was produced, which soon turned white: on opening the bottle at the end of 24 hours, the air was found to have lost a fifth part of its bulk, and to have become phlogisticated. Dephlogisticated air was still more reduced in bulk; but the contrary took place when inflammable air was employed."

Caustic alkaline lixivia, boiled on lead, dissolve a small quantity of it, and corrode more. It has been observed, that plants do not thrive so well in leaden as in earthen vessels.

In Holland, and perhaps in other places, it has been customary to correct the most offensive expressed oils, as that of rape-seed and rancid oils of almonds or olives, by impregnating them with lead. This dangerous abuse may be discovered by mixing a little of that oil with a solution of orpiment made in lime-water: for, on shaking them together, and suffering them to rest, the oil, if it has any saturnine tint, will appear of an orange red; but if pure, of a pale yellowish one. A similar abuse has also been practised with acid wines, which dissolve as much of the lead as communicate a sweetish taste. This is discovered in a similar manner; and upon this principle is founded the *liquor probatorius*, or test-liquor. This liquor is nothing else than a solution of orpiment or liver of sulphur in lime-water. If a few drops of this solution be put in a glass of the suspected liquor, it will exhibit a precipitation like a dark-coloured cloud. This is owing to the attachment of the lead to the sulphur in the orpiment. If lead, or its calces, in powder, be mixed with a solution of hepar sulphuris, a decomposition ensues, but the alkali is not thus deprived of its sulphur. Instead of this, it is re-converted into vitriolated tartar; the lead seizes the phlogiston of the sulphur, and allows the vitriolic acid to unite with the alkali.

Lead unites with most other metals. It cannot, however, be united with iron; but if both are exposed to the fire in a proper vessel, the lead scorifies the iron by seizing on its phlogiston; after which it melts with the calx into a dark-coloured glass. This property which lead possesses, of reducing all the imperfect metals to a glass, is the reason of its being used in the purification of gold and silver; neither of which can be touched by it, but remain pure in the bottom of the cupel. This process is the more complete by

realea

Lead.

reason of the great efficacy of lead in dissolving earthy bodies. In this respect it is so powerful a flux, that no earthen vessel or crucible can contain it when fused, of whatever materials the vessel be made. A mixture of raw and burned clay stands the action of lead for the greatest length of time; but at last this also gives way, and is corroded in the sides.

Litharge, a sort of refuse of lead, is employed in the composition of all the finer glasses called *pastes*, which are designed as imitations of precious stones. The addition of litharge renders them more solid and brilliant. The principal ingredients are the purest of flint, purified alkali, borax, and litharge; the other additions, chiefly of metallic calces, are added, merely for the sake of tinging them with various colours.

Lead is employed in making of various vessels, as cisterns for water, large boilers for chemical and other purposes, &c. It is frequently mixed with tin by the pewterers; a practice which M. Fourcroy sets forth as very dangerous, and gives the following process for detecting it: "Dissolve two ounces of the suspected metal in five ounces of a good pure nitrous acid. The calx of tin is to be washed with four pounds of distilled water, and dried, and the water evaporated by the heat of a water-bath. By this evaporation nitre of lead is procured; which being calcined, the weight of the residue shows the quantity of metal contained in the tin, allowing a few grains for the augmentation of weight arising from calcination, as well as the other metallic substances, such as zinc and copper, which the tin under examination may contain. Bayan and Charlard by this method ascertained, that fine wrought tin or pewter contains about 10 pounds of lead in the 100; and that the common tin sold in France under that name, often contains 25 pounds in the same quantity; an enormous dose, sufficient to expose those who use vessels made of this composition to the greatest danger."

There are several methods used by pewterers to discover the fineness of tin. This is done in some cases by simple inspection, the judgment being assisted by the weight and noise produced in bending the metal. But the best method is by trying the specific gravity of the metal: which will discover a very small quantity of lead, the difference betwixt the two metals being so considerable.

Lead, when taken into the human body, is productive of various disorders, particularly a dangerous kind of colic terminating in a palsy; and as all the common earthen ware is glazed with minium, the use of it cannot be supposed to be void of danger in all cases. Fountains, or vessels of lead which contain water, often communicate a noxious quality to it when suffered to remain long full. Its vapour is dangerous to the workmen who melt it, and the fumes falling upon the grass render it poisonous to the cattle who eat it; the fish who inhabit the waters near smelting houses soon die, nor is it safe for any animal to drink of it. In cases of poisoning by lead; antimonial emetics are recommended. Navier prescribes liver of sulphur and hepatic waters. The internal use of lead is certainly dangerous, though it is often prescribed in medicine; and even the external use of it is not altogether safe. Certain it is, that all workmen who deal much in lead, are subject to the cholick a-

Lead.

bove mentioned from the habitual contact of the metal or its calces, even though they neither take it internally, nor are exposed to its fumes.

*Black-LEAD (Plumbago)*, a genus of inflammable substances, frequently confounded with *molybdæna*; the appearance of which is nearly the same, though the qualities are very different. Black-lead, when pure, is extremely black; but when fresh cut, appears of a bluish white, and shining like lead. It is micaceous, and minutely scaly; easily broken, and of a granular and dull appearance when broken. Its tract on paper is much darker than that of *molybdæna*, which has a fine silvery appearance; by which means they are easily distinguished from one another. Black-lead is too soft to strike fire with steel: it is insoluble in acids; but in a very strong fire, when exposed to the air at the same time, it is entirely volatile, leaving only a little iron and a small quantity of siliceous earth. It may be decomposed by deslagration with nitre; but the common fluxes are not capable of procuring its fusion. Its specific gravity is from 1.987 to 2.267. According to Scheele, this substance consists of phlogiston combined with aerial acid: but M. Pelletier has shown, that when pure it neither produces fixed nor inflammable air; both which, when found, are entirely owing to the substances that are mixed with it. Mr Scheele says, that one part of plumbago requires ten of nitre to decompose it, but charcoal only five. The conclusion drawn from hence, viz. that plumbago contains twice as much phlogiston as charcoal, however, is by no means just; for the phlogiston may be defended from the action of the nitre, by means we cannot possibly know, in the one and not in the other. Dr Priestley's experiments on the dissipation of charcoal into inflammable air also show, that charcoal is little or nothing else than mere phlogiston, so that no substance whatever can contain more. From these experiments Mr Kirwan concludes, that 100 parts of plumbago contain 67 of phlogiston; because 100 grains of nitre contain 33 of real nitrous acid; all of which are decomposed when it receives as much phlogiston as is necessary to convert it into nitrous acid, or a little more. But 33 grains of nitrous acid are converted into nitrous air by 67 grains of phlogiston; the remaining 33 parts may be water, or other volatile substance. By the experiments of Messrs Gahn and Hielm, it appears, that 100 grains of plumbago, calcined in a muffle, lost 90 grains in weight; the remainder being a ferruginous earth, and the sulphureous smell showed that it contained some pyrites, both which were accidental to the black lead. M. Pelletier, however, as has already been hinted, affirms, that plumbago is volatilized in a strong fire, without producing any aerial vapour whatever; whence we must conclude, that the plumbago used by Scheele had not been quite pure. In close vessels, however, all agree, that black-lead sustains a vehement fire for a long time without any sensible diminution of weight. This is similar to charcoal; which for a long time was supposed to be indestructible in close vessels: but Dr Priestley has shown, that in a very violent fire, in close vessels, charcoal begins to emit inflammable air, and continues to do so without any end of the process that he could perceive; whence it is probable, that in this way also charcoal might be entirely dispersed, provided we could find vessels capable

of

**Lead.** of sustaining such a long and vehement heat. No experiments have been made with black-lead in this way, either with the solar heat *in vacuo*, or with a violent heat in an iron or other vessel capable of resisting a long continued heat.

Cronstedt, when treating of this mineral, observes, that "Mr Pott examined it in close vessels, and Mr Quist in an open fire; from which difference in the mode of treatment, different notions had arisen: because the black-lead, when treated in close vessels, or when immediately put into a strong charcoal fire, is almost unalterable; but in a calcining heat, becomes almost entirely volatile. This is the case with several of the other mineral phlogistons; and from this we may in general learn, how necessary it is to examine the mineral bodies by many and different methods, and to endeavour to multiply the experiments more than has hitherto been done."

With regard to the reduction of metallic calces, which ought to be accomplished by this *phlogistic* substance, M. Pelletier affirms, that it cannot be done unless the black-lead be mixed with fixed alkali, in the same manner as when charcoal is employed in such circumstances. It cannot be combined with iron, as Bergman asserts; nor with any other metal, though it may be simply interspersed betwixt its particles. M. Pelletier indeed owns, that there is a kind of plumbago found swimming over the melted iron in large furnaces where iron-ores are smelted; but he thinks, that this must have been naturally mixed with the mineral. It is also the only known plumbago of a very distinct lamellar form; as he observed in the pieces obtained from the iron works at Vallancy in the French province of Berry.

Black-lead is found of different kinds; *viz.* 1. Of a steel-grained and dull texture; naturally black, but when rubbed affording a dark-lead colour. 2. Of a granulated and scaly appearance at the same time. It is found in different countries, as Germany, France, Spain, the Cape of Good Hope, and America; but generally in small quantities, and of very different qualities. The best sort, however, and the fittest of all for making pencils, is that met with in the county of Cumberland in England. It is found in such plenty at a place called *Borrowdale* in this county, that hence not only the whole island of Britain, but the whole continent of Europe, may be said to be supplied. "I have seen (says M. Magellan) various specimens from different countries; but their coarse texture and bad quality cannot bear any comparison with that of *Borrowdale*; though it sometimes, but seldom, contains pyritaceous particles of iron. It is but a few years ago, that this mine seemed to be almost exhausted; but by digging some few yards through the strata underneath, according to the advice of an experienced miner, whose opinion had been long unattended to, a very thick and rich vein of the best black-lead has been discovered, to the great joy of the proprietors and advantage of the public."

The principal use of black-lead is for making pencils for drawing; which have the advantage of marking paper very distinctly for a time, though their traces may afterwards be entirely rubbed out by soft bread or elastic gum. To form the pencils, the lead is cut into thin parallelepipeds, and put into quadrangular

grooves cut in pieces of cypress wood; and a slit being glued over, they are worked into small cylinders like quills. A coarser kind are made by working up the powder of black-lead with sulphur, or some mucilaginous substance; but these answer only for carpenters, or some very coarse drawings. One part of plumbago with three of clay, and some cows hair, makes an excellent coating for retorts, as it keeps its form even after the retorts have melted. The famous crucibles of Ypsen are formed of plumbago mixed with clay. These are known in Britain by the name of *Hessian crucibles*; but a manufacture of the same kind is now established at Chelsea in the neighbourhood of London, where crucibles are manufactured nearly of the same quality with the foreign ones. The powder of black-lead serves also to cover the straps for razors; and it is with it that the cast-iron work, such as stoves, &c. receive a gloss on their surface. An application, however, perhaps as useful as any other, is that of black-lead to smooth the surfaces of wooden work which are subjected to much friction, as wooden screws, packers presses, &c.; neither greasy nor oily substances, nor soapy ointments, produce such a good effect upon them.

*Sheet-LEAD.* See PLUMBERY.

**LEAF**, a part of a plant extended into length and breadth in such a manner as to have one side distinguishable from the other. This is Miller's definition. Linnæus denominates leaves "the organs of motion, or muscles of the plant."—The leaves are not merely ornamental to plants; they serve very useful purposes, and make part of the organs of vegetation.

The greater number of plants, particularly trees, are furnished with leaves: in mushrooms, and shrubby horse-tail, they are totally wanting. Ludwig defines leaves to be fibrous and cellular processes of the plant, which are of various figures, but generally extended into a plain membranaceous or skinny substance. They are of a deeper green than the foot-stalks on which they stand, and are formed by the expansion of the vessels of the stalk, among which, in several leaves, the proper vessels are distinguished by the particular taste, colour, and smell, of the liquors contained within them.

By the expansion of the vessels of the stalk, are produced several ramifications or branches, which, crossing each other mutually, form a kind of net; the meshes or interstices of which are filled up with a tender cellular substance, called the *pulp*, *pith*, or *parenchyma*. This pulpy substance is frequently consumed by certain small insects, whilst the membranous net remaining untouched exhibits the genuine skeleton of the leaf.

The net in question is covered externally with an epidermis or scarf-skin, which appears to be a continuation of the scarf-skin of the stalk, and perhaps of that of the stem. M. Desaussure, a judicious naturalist, has attempted to prove, that this scarf-skin, like that of the petals, is a true bark, composed itself of an epidermis and cortical net; these parts seem to be the organs of perspiration, which serve to dissipate the superfluous juices.

The cortical net is furnished, principally on the surface.

**Gold-Leaf.** Surface of the leaf, with a great number of suckers or absorbent vessels, destined to imbibe the humidity of the air. The upper surface, turned towards heaven, serves as a defence to the lower, which looks downward; and this disposition is so essential to the vegetable economy, that, if a branch is overturned in such a manner as to destroy the natural direction of the leaves, they will, of themselves, in a very short time, resume their former position; and that as often as the branch is thus overturned.

Leaves, then, are useful and necessary organs; trees perish when totally divested of them. In general, plants stript of any of their leaves, cannot shoot vigorously: witness those which have undergone the depredations of insects; witness, likewise, the very common practice of stripping off some of the leaves from plants, when we would suspend their growth, or diminish the number of their shoots. This method is sometimes observed with corn and the esculent grasses; and, in cold years, is practised on fruit-trees and vines, to render the fruit riper and better coloured: but in this case it is proper to wait till the fruits have acquired their full bulk, as the leaves contribute greatly to their growth, but hinder, when too numerous, that exquisite rectifying of the juices, which is so necessary to render them delicious and palatable.

When vegetation ceases, the organs of perspiration and inspiration become superfluous. Plants, therefore, are not always adorned with leaves: they produce new ones every year; and every year the greater part are totally divested of them, and remain naked during the winter. See PLANT.

**LEAF-Insect.** See CIMEK.

**LEAF,** in clocks and watches, an appellation given to the notches of their pinions.

**Gold-LEAF,** usually signifies fine gold beaten into plates of an exceeding thinness, which are well known in the arts of gilding, &c. The preparation of gold-leaf, according to Dr Lewis, is as follows.

“The gold is melted in a black-lead crucible, with some borax, in a wind-furnace, called by the workmen a *wind hole*: as soon as it appears in perfect fusion, it is poured out into an iron ingot mould, six or eight inches long, and three quarters of an inch wide, previously greased, and heated, so as to make the tallow run and smoke, but not to take flame. The bar of gold is made red hot, to burn off the unctuous matter, and forged on an anvil into a long plate, which is further extended, by being passed repeatedly between polished steel rollers, till it becomes a ribbon as thin as paper. Formerly the whole of this extension was procured by means of the hammer, and some of the French workmen are still said to follow the same practice: but the use of the flattening-mill both abridges the operation, and renders the plate of more uniform thickness. The ribbon is divided by compasses, and cut with sheers into equal pieces, which consequently are of equal weights: these are forged on an anvil till they are an inch square; and afterwards well nealed, to correct the rigidity which the metal has contracted in the hammering and flattening. Two ounces of gold, or 960 grains, the quantity which the workmen usually melt at a time, make 150 of these squares, whence each of them weighs six grains and two-fifths; and as 902 grains of gold make a cubic inch, the

thickness of the square plates is about the 766th part of an inch.

“In order to the further extension of these pieces into fine leaves, it is necessary to interpose some smooth body between them and the hammer, for softening its blow, and defending them from the rudeness of its immediate action: as also to place between every two of the pieces some proper intermedium, which, while it prevents their uniting together, or injuring one another, may suffer them freely to extend. Both these ends are answered by certain animal membranes.

“The gold-beaters use three kinds of membranes; for the outside cover, common parchment made of sheep-skin; for interlaying with the gold, first the smoothest and closest vellum, made of calf-skin; and afterwards the much finer skins of ox-gut, stript off from the large straight gut slit open, curiously prepared on purpose for this use, and hence called *gold-beater's skin*. The preparation of these last is a distinct business, practised by only two or three persons in the kingdom, some of the particulars of which I have not satisfactorily learned. The general process is said to consist, in applying one upon another, by the smooth sides, in a moist state, in which they readily cohere and unite inseparably; stretching them on a frame, and carefully scraping off the fat and rough matter, so as to leave only the fine exterior membrane of the gut; beating them between double leaves of paper, to force out what unctuousity may remain in them; moistening them once or twice with an infusion of warm spices; and lastly, drying and pressing them. It is said, that some calcined gypsum, or plaster of Paris, is rubbed with a hare's foot both on the vellum and the ox-gut skins, which fills up such minute holes as may happen in them, and prevents the gold-leaf from sticking, as it would do to the simple animal-membrane. It is observable, that, notwithstanding the vast extent to which the gold is beaten between these skins, and the great tenuity of the skins themselves, yet they sustain continual repetitions of the process for several months, without extending or growing thinner. Our workmen find, that, after 70 or 80 repetitions, the skins, though they contract no flaw, will no longer permit the gold to extend between them; but that they may be again rendered fit for use by impregnating them with the virtue which they have lost, and that even holes in them may be repaired by the dexterous application of fresh pieces of skin: a microscopical examination of some skins that had been long used plainly showed these repairs. The method of restoring their virtue is said in the *Encyclop. die* to be, by interlaying them with leaves of paper moistened with vinegar white-wine, beating them for a whole day, and afterwards rubbing them over as at first with plaster of Paris. The gold is said to extend between them more easily, after they have been used a little, than when they are new.

“The heating of the gold is performed on a smooth block of black marble, weighing from 200 to 600 pounds, the heavier the better; about nine inches square on the upper surface, and sometimes less, fitted into the middle of a wooden frame, about two feet square, so as that the surface of the marble and the frame form one continuous plane. Three of the sides are furnished with a high ledge; and the front, which

*Gold-Leaf.* is open, has a leather flap fastened to it, which the gold-beater takes before him as an apron, for preferring the fragments of gold that fall off. Three hammers are employed, all of them with two round and somewhat convex faces, though commonly the workman uses only one of the faces: the first, called the *catch-hammer*, is about four inches in diameter, and weighs 15 or 16 pounds, and sometimes 20, though few workmen can manage those of this last size: the second, called the *shoddering-hammer*, weighs about 12 pounds, and is about the same diameter: the third, called the *gold-hammer*, or *finishing-hammer*, weighs 10 or 11 pounds, and is nearly of the same width. The French use four hammers, differing both in size and shape from those of our workmen: they have only one face, being in figure truncated cones. The first has very little convexity, is near five inches in diameter, and weighs 14 or 15 pounds: the second is more convex than the first, about an inch narrower, and scarcely half its weight: the third, still more convex, is only about two inches wide, and four or five pounds in weight: the fourth or finishing hammer is near as heavy as the first, but narrower by an inch, and the most convex of all. As these hammers differ so remarkably from ours, I thought proper to insert them, leaving the workmen to judge what advantage one set may have above the other.

"A hundred and fifty of the pieces of gold are interlaid with leaves of vellum, three or four inches square, one vellum leaf being placed between every two of the pieces, and about 20 more of the vellum leaves on the outlides; over these is drawn a parchment case, open at both ends, and over this another in a contrary direction, so that the assemblage of gold and vellum leaves is kept tight and close on all sides. The whole is beaten with the heaviest hammer, and every now and then turned upside down, till the gold is stretched to the extent of the vellum; the case being from time to time opened for discovering how the extension goes on, and the packet, at times, bent and rolled as it were between the hands, for procuring sufficient freedom to the gold, or, as the workmen say, to make the gold work. The pieces, taken out from between the vellum leaves, are cut in four with a steel knife; and the 600 divisions, hence resulting, are interlaid, in the same manner, with pieces of the ox-gut skins five inches square. The beating being repeated with a lighter hammer till the golden plates have again acquired the extent of the skins, they are a second time divided in four: the instrument used for this division is a piece of cane cut to an edge, the leaves being now so light, that the moisture of the air or breath condensing on a metalline knife would occasion them to stick to it. These last divisions being so numerous, that the skins necessary for interpoling between them would make the packet too thick to be beaten at once, they are parted into three parcels, which are beaten separately, with the smallest hammer, till they are stretched for the third time to the size of the skins: they are now found to be reduced to the greatest thinness they will admit of; and indeed many of them, before this period, break or fail. The French workmen, according to the minute detail of this process given in the *Encyclopédie*, repeat the division and the beating once more; but as the squares of gold,

taken for the first operation, have four times the area of those used among us, the number of leaves from an equal area is the same in both methods, *viz.* 16 from a square inch. In the beating, however simple the process appears to be, a good deal of address is requisite, for applying the hammers so as to extend the metal uniformly from the middle to the sides: one improper blow is apt not only to break the gold leaves, but to cut the skins.

"After the last beating, the leaves are taken up by the end of a cane instrument, and, being blown flat on a leather-cushion, are cut to a size, one by one, with a square frame of cane made of a proper sharpness, or with a frame of wood edged with cane: they are then fitted into books of 25 leaves each, the paper of which is well smoothed, and rubbed with red-bole to prevent their sticking to it. The French, for sizing the leaves, use only the cane-knife; cutting them first straight on one side, fitting them into the book by the straight side, and then paring off the superfluous parts of the gold about the edges of the book. The size of the French gold leaves is from somewhat less than three inches to three and three quarters square; that of ours, from three inches to three and three-eighths.

"The process of gold-beating is considerably influenced by the weather. In wet weather, the skins grow somewhat damp, and in this state make the extension of the gold more tedious: the French are said to dry and press them at every time of using; with care not to overdry them, which would render them unfit for farther service. Our workmen complain more of frost, which appears to affect the metalline leaves themselves: in frost, a gold-leaf cannot easily be blown flat, but breaks, wrinkles, or runs together.

"Gold-leaf ought to be prepared from the finest gold; as the admixture of other metals, though in too small a proportion to sensibly affect the colour of the leaf, would dispose it to lose of its beauty in the air. And indeed there is little temptation to the workman to use any other; the greater hardness of alloyed gold occasioning as much to be lost in point of time and labour, and in the greater number of leaves that break, as can be gained by any quantity of alloy that would not be at once discoverable by the eye. All metals render gold harder and more difficult of extension: even silver, which in this respect seems to alter its quality less than any other metal, produces with gold a mixture sensibly harder than either of them separately, and this hardness is in no art more felt than in the gold-beater's. The French are said to prepare what is called the *green gold-leaf*, from a composition of one part of copper and two of silver with eighty of gold. But this is probably a mistake: for such an admixture gives no greenness to gold: and I have been informed by our workmen, that this kind of leaf is made from the same fine gold as the highest gold coloured sort, the greenish hue being only a superficial taint induced upon the gold in some part of the process: this greenish leaf is little otherwise used than for the gilding of certain books.

"But though the gold-beater cannot advantageously diminish the quantity of gold in the leaf by the admixture of any other substance with the gold, yet means have been contrived, for some particular purposes, of saving the precious metal, by producing a

**League.** kind of leaf called *party-gold*, whose basis is silver, and which has only a superficial coat of gold upon one side: a thick leaf of silver and a thinner one of gold, laid flat on one another, heated and pressed together, unite and cohere; and being then beaten into fine leaves, as in the foregoing process, the gold, though its quantity is only about one-fourth of that of the silver, continues every where to cover it, the extension of the former keeping pace with that of the latter.

**LEAGUE**, a measure of length, containing more or fewer geometrical paces, according to the different usages and customs of countries. A league at sea, where it is chiefly used by us, being a land-measure mostly peculiar to the French and Germans, contains 3000 geometrical paces, or three English miles. The French league sometimes contains the same measure, and in some parts of France it consists of 3500 paces: the mean or common league consists of 2400 paces, and the little league of 2000. The Spanish leagues are larger than the French, 17 Spanish leagues making a degree, or 20 French leagues, or  $69\frac{1}{2}$  English statute miles. The Dutch and German leagues contain each four geographical miles. The Persian leagues are pretty near of the same extent with the Spanish; that is, they are equal to four Italian miles: which is pretty near to what Herodotus calls the length of the Persian parasang, which contained 30 stadia, eight whereof, according to Strabo, make a mile. The word comes from *leuca*, or *leuga*, an ancient Gaulish word for an itinerary measure, and retained in that sense by the Romans. Some derive the word *leuca* from λευκος, "white;" as the Gauls, in imitation of the Romans, marked the spaces and distances of their roads with white stones.

**LEAGUE** also denotes an alliance or confederacy between princes and states for their mutual aid, either in attacking some common enemy, or in defending themselves. The word comes from *liga*, which in the corrupt Latin was used for a *confederacy*: *Qua quis cum alio ligatur*.

Leagues, among the Greeks, were of three sorts: 1. Σπονδῆς, Συνδραχῆς, or Ειρήνης, whereby both parties were obliged to cease from hostilities, without even molesting the allies of each other; 2. Ετιμαχία, whereby they engaged to lend assistance to each other in case of invasion; and, 3. Συμμαχία, whereby they engaged to have the same friends and enemies, and to assist each other upon all occasions. All these leagues were confirmed with oaths, and imprecations, and sacrifices. The victims most generally used were a boar, ram, or goat, sometimes all three; and sometimes bulls and lambs. They cut out the testicles of the animal, and stood upon them while they swore; and some of the hair of the victim was distributed to all present. Then they cut the animal's throat, which was called *ορσία* *τελευτή*, in Latin, *ferire fedus*.—This done, they repeated their oaths and imprecations, calling the gods to witness the honesty of their intentions. A libation was then made of wine, which at this time was mixed, to imply their conjunction and union: while this was pouring out, they prayed that the blood of him who should break the treaty might be poured out in like manner. Upon these occasions no part of the victim was eaten. Still further to increase the solemnity of this obligation, the league was engraven upon brass,

fixed up in places of public concourse, and sometimes read at the solemn games. Some exchanged certain *Συμβόλια* or *teffera* upon the occasion, and frequently sent ambassadors, on some appointed day, to keep them in mind of their engagements to each other.

The ceremonies of the Romans in making leagues were performed by the *Fociales*. See **FECTALES**.

**LEAGUES of the Grisons**, are a part of Switzerland, consisting of three subdivisions, *viz.* the upper league, the league of the house of God, and the league of the ten jurisdictions. See the article **GRISONS**.

The **LEAGUE**, by way of eminence, denotes that famous one on foot in France, from the year 1576 to 1593. Its intent was to prevent the succession of Henry IV. who was of the reformed religion, to the crown; and it ended with his abjuration of that faith.

The *leaguers*, or confederates, were of three kinds. The *zealous leaguers* aimed at the utter destruction not only of the Huguenots, but also of the ministry. The *Spanish leaguers* had principally in view the transferring the crown of France to the king of Spain, or the infant his daughter. The *moderate leaguers* aimed only at the extirpation of Calvinism, without any alteration of the government.

**LEAK**, at sea, is a hole in the ship, through which the water comes in. A ship is said to *spring a leak* when she begins to leak or to let in the water. The manner of stopping a leak is to put into it a plug wrapped in oakum and well tarred, or in a tawpawling clout, which keeps out the water, or nailing a piece of sheet lead on the place. Seamen sometimes stop a leak by thrusting a piece of salt beef into it. The sea-water, says Mr Boyle, being fresher than the brine imbibed by the beef, penetrates into its body, and causes it to swell so as to bear strongly against the edges of the broken plank, and thereby stops the influx of the water.—A ready way to find a leak in a ship is to apply the narrower end of a speaking trumpet to the ear, and the other to the side of the ship where the leak is supposed to be; then the noise of the water issuing in at the leak will be heard distinctly, whereby it may be discovered.

**LEAKAGE**, the state of a vessel that leaks, or lets water or other liquid ooze in or out.

**LEAKAGE**, in commerce, is an allowance of 12 *per cent.* in the customs, allowed to importers of wines for the waste or damage it is supposed to have received in the passage: an allowance of two barrels in 22 is also made to the brewers of ale and beer by the excise-office.

**LEAKE** (Richard), master-gunner of England, was born at Harwich in 1629, and was bred to the sea. At the restoration, he was made master-gunner of the Princess, a frigate of 50 guns; and in the first Dutch war distinguished himself by his skill and bravery in two extraordinary actions; one against 15 sail of Dutch men of war; and another in 1667 against two Danes in the Baltic, in which the commanding officers of the Princess being killed or desperately wounded, the command, according to the rules of war at that time, fell to the gunner. In 1669, he was promoted to be gunner of the Royal Prince, a first-rate man of war. He was engaged, with his two sons Henry and John, in the battle against Van Tromp, in 1673; when the Royal Prince had all her masts shot away,

Leake. near 400 of her men killed and disabled, and most of her upper tier of guns dismounted. As she lay thus like a wreck, a great Dutch man of war came down upon her with two fire-ships, either to burn or carry her off; and Captain Rooke, afterwards Sir George, thinking it impossible to defend her, ordered the men to save their lives, and the colours to be struck. Mr Leake hearing this, ordered the lieutenant off the quarter-deck, and took the command upon himself, saying, "The Royal Prince shall never be given up to the enemy while I am alive to defend her." The undaunted spirit of the brave gunner inspired the small residue of the ship's company with resolution: they returned with alacrity to the fight, and under the direction of this valiant gunner and his two sons sunk both the fire-ships, and obliged the man of war to sheer off; and having thus saved the Royal Prince, he brought her into Chatham. But Mr Leake's joy in obtaining this victory was damped by the loss of Henry, his eldest son, who was killed near him. Soon after, Mr Leake was preferred to the command of a yacht, and also made gunner of Whitehall. In 1677, he obtained a grant for life of the office of master-gunner of England, and store-keeper of the ordnance at Woolwich. By these posts he had full scope for his genius. He accordingly, among other things, invented the custhee-piece; and contrived to fire a mortar by the blast of a piece, which has been used ever since. He was also the principal contriver of what the French call *infernals*, used at the bombardment at St Malo's in 1693. Mr Leake had a surprising genius for all inventions of this kind; and had frequent trials of skill with French and Dutch gunners and engineers in Woolwich warren, at which king Charles II. and the duke of York were often present, and he never failed to excel all his competitors: nor was he less skilled in the art of making compositions for fireworks; of which he likewise made frequent trials with equal success.

LEAKE (Sir John), an English admiral, distinguished by his bravery and success, was born in 1656, and was taught mathematics and gunnery by Mr Richard Leake his father, who was master-gunner of England. Entering early into the navy, he distinguished himself under his father in 1673, in the memorable engagement between Sir Edward Spragg and Van Tromp, when but 16 years of age; and being afterwards made captain, he signalized himself, among other occasions, by executing the desperate attempt of convoying some victualers into Londonderry, which obliged the enemy to raise the siege; and at the famous battle of La Hogue. In 1702, being made commodore of a squadron, he destroyed the French trade and settlements at Newfoundland, and restored the English to the possession of the whole island. On his return he was created rear-admiral; soon after, he was made vice-admiral of the blue, and was afterwards knighted. He was engaged with admiral Rook in taking Gibraltar: soon after which, he particularly distinguished himself in the general engagement off Malaga; when commanding the leading squadron of the van, consisting only of six ships, he drove that of the enemy, consisting of 13, out of the line of battle, so disabled that they never returned to the fight. In 1705,

he relieved Gibraltar, which the French had besieged by sea, and the Spaniards by land, so seasonably, that the enemy was to have attacked the town that very night in several places, and would undoubtedly have made themselves masters of it. Five hundred Spaniards had, by the help of rope-ladders, climbed up the rocks by a way that was thought inaccessible. At the same time they had got a great number of boats to land 3000 men at the New Mole, who, by making a vigorous assault on the side next the sea, were to draw the garrison to oppose that attack, while the 500 concealed men rushed into the town. These being the next day drawn by hunger out of their ambuscade, were discovered; on which Sir John assisting the garrison with sailors and marines, they were attacked with such vigour, that, though they had taken an oath not to surrender to the English, 190 common soldiers and 30 officers took quarter; 200 were killed on the spot; and the rest, who endeavoured to make their escape, fell headlong down the rock. He was soon after made vice-admiral of the white, and then twice relieved that fortress. The last time, he attacked five ships of the French fleet coming out of the bay, of whom two were taken, and two run ashore and were destroyed: baroa Pointi died soon after, of the wounds he received in the battle; and in a few days the enemy raised the siege. In the year 1705, Sir John was engaged in the reduction of Barcelona; and the next year relieved that city, when it was reduced to the last extremity, and obliged king Philip to raise the siege. Soon after he took the city of Carthagena; from whence proceeding to Alicant and Joyce, both these submitted to him; and he concluded the exploits of that year with the reduction of the city and island of Majorca. Upon his return home, prince George of Denmark made him a present of a ring valued at 400 l. and he had the honour of receiving 1000 l. from the queen as a reward for his services. Upon the unhappy death of Sir Cloudesly Shovel, in 1707, he was made admiral of the white, and commander in chief of her majesty's fleet; and the next year, surprising a convoy of the enemy's corn, he sent it to Barcelona, and thus saved both that city and the confederate army from the danger of famine: soon after, convoying the new queen of Spain to king Charles her consort, her majesty made him a present of a diamond ring of 500 pounds value. He then proceeded to the island of Sardinia, which he reduced to the obedience of king Charles; and soon after assisted the lord Stanhope in the conquest of Minorca. Then returning home, he was appointed one of the council to the lord high admiral; and in 1709, was made rear admiral of Great Britain. He was several times chosen member of parliament for Rochester; and in 1712 conducted the English forces to take possession of Dunkirk. But upon the accession of king George I. he was superseded, and allowed a pension of 600 l. a-year. After this he lived privately till his death, which happened at his house in Greenwich in 1720.

LEAKE (Stephen Martin, Esq;) son of Captain Martin, went through different ranks in the heralds office till he came to be garter. He was the first person who wrote professedly on our English coins, two editions of his "Historical Account" of which were

Leander  
||  
Leap.

published by him with plates, under the title of *Numeri Britannici Historia*, London, 1726, 8vo; the second, much improved, London, 1745, 8vo. He printed, in 1750, "The Life of Sir John Leake, knight, admiral of the fleet," &c. to whom he was indebted for a considerable estate; which the Admiral devised to trustees for the use of his son for life; and upon his death to Captain Martin (who married Lady Leake's sister) and his heirs: By which means it came to the Captain's son; who, in gratitude to the memory of Sir John Leake, wrote an accurate account of his life, of which only 50 copies were printed. In 1766, he printed also 50 copies of "The Statutes of the Order of the Garter," 4to. He died in 1773; and was buried in his chancel in the parish-church of Thorp in Essex, of which manor he was lord.

LEANDER, in poetic history, a young man of Abydos in Asia. He used to swim over the Hellespont by night to visit Hero his mistress, who set forth a light to guide him: but in a tempestuous winter-night he was drowned; upon which Hero seeing him dead on the shore, cast herself headlong from the tower, and died also. See HERO.

LEAO, in natural history, a mineral substance approaching to the nature of the lapis lazuli, found in the East Indies, and of great use in the Chinese porcelain manufactures, being the finest blue they are possessed of. This stone is found in the strata of pit-coal, or in those of a yellowish or reddish earth in the neighbourhood of the veins of coal. There are often found pieces of it lying on the surface of the ground, and these are a sure indication that more will be found on dipping. It is generally found in oblong pieces of the size of a finger, not round, but flat. Some of this is very fine, and some coarse and of a bad colour. The latter is very common; but the fine sort is scarce, and greatly valued. It is not easy to distinguish them at sight, but they are found by experiment; and the trying one piece is generally sufficient for judging of the whole mine, for all that is found in the same place is usually of the same sort.

The manner of preparing it for use is this: They first wash it very clean, to separate it from the earth or any other foulness it may have: they then lay it at the bottom of their baking furnaces; and when it has been thus calcined for three or four hours, it is taken out, and powdered very fine in large mortars of porcelain, with stone pebbles faced with iron. When the powder is perfectly fine, they pour in boiling water, and grind that with the rest, and when it is thoroughly incorporated, they add more, and finally pour it off after some time settling. The remainder at the bottom of the mortar, which is the coarser part, they grind again with more water; and so on till they have made the whole fine, excepting a little dirt or grit. When this is done, all the liquors are mixed together, and well stirred. They are suffered to stand two or three minutes after this, and then poured off with the powder remaining in them: this is suffered to subside gradually, and is the fine blue used in their best works, our common small serving for the blue of all the common china ware.

LEAP, in music, is when the song does not proceed by conjoint degrees, as when between each note there is an interval of a third, a fourth, fifth, &c.

LEAP-Year. See YEAR, and CHRONOLOGY, n<sup>o</sup> 24.

LOVERS-LEAP. See LEUCATA.

LEAPING, or VAULTING, was an exercise much used both amongst the Greeks and Romans. The Grecians called it *λυμα*, and performed it with weights upon their heads and shoulders. Sometimes they carried the weights in their hands, which were of different figures, but generally oval and made with holes or covered with thongs, through which the contenders put their fingers. These weights were called *Αληπτες*. The contest was who could leap the highest and farthest. The place from whence they jumped was called *Βληπος*, and that to which they leaped, *εκαμπενα*, because the ground was there dug up. This exercise was performed in the same manner by the Romans.

LEAR, the name of a British king said in old chronicles to have succeeded his father Bladud, about A. M. 3160. The story of this king and his three daughters, is well known from Shakespeare's excellent tragedy founded on it.

LEASE, from the French *laiser*, *demittere*, "to let," in law, a demise, or letting of lands, tenements, or hereditaments, unto another for life, term of years, or at will, for a rent reserved.

A lease is either written, called an *indenture*, *deed-poll*, or *lease* in writing; or by word of mouth, called *lease parole*.

All estates, interests of freehold, or terms for years in lands, &c. not put in writing and signed by the parties, shall have no greater effect than as estates at will; unless it be of leases not exceeding three years from the making; wherein the rent reserved shall be two-thirds of the value of the things demised. Leases exceeding three years must be made in writing; and if the substance of a lease be put in writing, and signed by the parties, though it be not sealed, it shall have the effect of a lease for years, &c.

An *assignment* differs from a lease only in this; that by a lease one grants an interest less than his own, reserving to himself a reversion; in assignments he parts with the whole property, and the assignee stands to all intents and purposes in the place of the assignor.

LEASE, in Scots law. See TACK.

LEASE and *Release*, a species of conveyance used in the English law, first invented by Serjeant Moore, soon after the statute of uses, and now the most common of any, and therefore not to be shaken; though very great lawyers (as particularly Mr Noy) have formerly doubted its validity. It is thus contrived. A lease, or rather bargain and sale, upon some pecuniary consideration, for one year, is made by the tenant of the freehold to the lessee or bargainee. Now this, without any enrolment, makes the bargainor stand seized to the use of the bargainee, and vests in the bargainee the use of the term for a year; and then the statute immediately annexes the *possession*. He therefore, being thus in possession, is capable of receiving a release of the freehold and reversion, which must be made to a tenant in possession: and accordingly, the next day, a release is granted to him. This is held to supply the place of livery of seisin; and so a conveyance by lease and release is said to amount to a feoffment.

LEASH, among sportsmen, denotes three creatures

Leaping  
||  
Leash.

tures of any kind; but chiefly gre-hounds, foxes, bucks, and hares.

The term *leash* also signifies a line to hold in a hunting dog; and a small long thong of leather, by which a falconer holds his hawk.

LEASING MAKING, in Scots law, the uttering of words tending to excite discord between the king and his people: also called *verbal sedition*.

LEATHER, the skin of several sorts of beasts dressed and prepared for the use of various manufacturers, whose business it is to make them up.

*Dyeing of LEATHER, Skins, &c.* *Blue* is given by steeping the subject a day in urine and indigo, then boiling it with alum: or it may be given by tempering the indigo with red-wine, and washing the skins therewith. *Red* is given by washing the skins, and laying them two hours in galls, then wringing them out, dipping them in a liquor made with ligustrum, alum, and verdigrease in water; and lastly, in a dye made of brazil-wood, boiled with ley. *Purple* is given by wetting the skins with a solution of roche alum in warm water; and, when dry again, rubbing them with the hand with a decoction of log-wood in colder. *Green* is given by smearing the skin with sap-green and alum-water boiled. *Dark green* is also given with steel-silings and sal armoniac steeped in urine till soft, then smeared over the skin; which is to be dried in the shade. *Sly-colour* is given with indigo steeped in boiling water, and the next morning warmed and smeared over the skin. *Yellow*, by smearing the skin over with aloes and linseed-oil dissolved and strained; or by infusing it in weld. *Orange colour* is given by smearing with sullic berries boiled in alum-water; or, for a deep orange, with turmeric.

*Processes for Dyeing LEATHER Red and Yellow as practised in Turkey, with directions for Preparing and Tanning the Skins; as communicated by Mr Phillippo, a native of Armenia, who received from the Society for the Encouragement of Arts. &c. one hundred pounds, and also the gold medal of the Society, as a reward for discovering this secret.*

1. *First Preparation of the Skins, both for Red and Yellow Leather, by dressing them in Lime.* Let the skins, dried with the hair on, be first laid to soak in clean water for three days; let them then be broken over the flesh-side, put into fresh water for two days longer, and afterwards hung up to drain half an hour. Let them now be broken on the flesh-side, limed in cold lime on the same side, and doubled together with the grain side outward. In this state they must be hung up within doors over a frame for five or six days, till the hair be loose; which must then be taken off, and the skins returned into the lime-pit for about three weeks. Take them out, and let them be well worked flesh and grain, every sixth or seventh day during that time: after which, let them be washed ten times in clear water, changing the water at each washing. They are next to be prepared in drench, as below mentioned.

2. *Second Preparation of the Skins for both the Red and Yellow Dyes by drenching.* After squeezing the water out of the skins, put them into a mixture of bran and water, warm as new milk, in the following proportions; viz. about three pounds of bran for five

skins, and water sufficient to make the mixture moderately fluid, which will be about a gallon to each pound of bran. In this drench let the skins lie three days; at the end of which time they must be well worked, and afterwards returned into the drench two days longer. They must then be taken out and rubbed between the hands; the water squeezed from them, and the bran scraped off clear from both sides of the skins. After this they must be again washed ten times in clear water, and the water squeezed out of them.

Thus far the preparatory process of all the skins, whether intended to be dyed red or yellow, is the same; but afterwards those which are to be dyed red, must be treated as follows.

3. *Preparation in Honey and Bran of the Skins that are to be dyed Red.* Mix one pound of honey with three pints of luke warm water, and stir them together till the honey is dissolved. Then add two double handfuls of bran; and taking four skins (for which the above quantity of the mixture will be sufficient) work them well in it one after another. Afterwards fold up each skin separately into a round form, with the flesh-side inwards; and lay them in an earthen pan, or other proper vessel; if in the summer, by the side of each other; but in the winter, on the top of each other. Place the vessel in a sloping position, so that such part of the fluid as may spontaneously drain from the skins, may pass from them. An acid fermentation will then rise in the liquor, and the skins will swell considerably. In this state they must continue for seven or eight days; but the moisture that drains from them must be poured off, once or twice a-day, as occasion may require. After this a further preparation in salt is necessary; and which must be performed in the following manner.

4. *Preparation in Salt, of the Skins to be dyed Red.* After the skins have been fermented in the honey and bran, as above mentioned, let them be taken out of that mixture on the eighth or ninth day, and well rubbed with dry common sea-salt, in the proportion of about half a pound to each skin; the salt must be well rubbed and worked with them. This will make them contract again, and part with a further considerable quantity of moisture; which must be squeezed out by drawing each skin separately through the hands. They must next be scraped clean on both sides from the bran, superfluous salt, and moisture that may adhere to them. After which, dry salt must be strewed over the grain-side, and well rubbed in with the hand. They are then to be doubled with the flesh side outwards, lengthwise from neck to tail, and a little more dry salt must be thinly strewed over the flesh-side, and rubbed in; for the two last operations, about a pound and a half of salt will be sufficient for each skin. They must then be put, thus folded on each other, between two clean boards, placed sloping, breadthwise; and a heavy weight laid on the upper board, in order gradually to press out what moisture they will thus part with. In this state of pressure, they must be continued two days or longer, till it is convenient to dye them, for which they will then be duly prepared.

5. *Preparation of the Red Dye, in a proper proportion for four skins.* Put eight gallons of water into a

copper,

Leather.

copper, with seven ounces of shenan (A) tied up in a linen bag. Light a fire under a copper; and when the water has boiled about a quarter of an hour, take out the bag of shenan, and put into the boiling fluid or lixivium, 1st, two drams of alum; 2dly, two drams pomegranate bark; 3dly, three quarters of an ounce of turmeric; 4thly, three ounces of cochineal; 5thly, two ounces of loaf-sugar. Let the whole mixture boil about six minutes, then cover the fire, and take out a quart of liquor, putting it into a flat earthen pan; and when it is as cold as new milk, take one skin, folded lengthwise, the grain side outwards, and dip it in the liquor, rubbing it gently with the hands. Then taking out the skin, hang it up to drain, and throw away the superfluous dye. Proceed in the same manner with the remaining three skins; repeating the operation of each skin separately, eight times, squeezing the skins by drawing them through the hands before each fresh dipping. Lay them now on one side of a large pan, set sloping, to drain off as much of the moisture as will run from them without pressure, for about two hours, or till they are cold; then tan them as below directed.

6. *Tanning the Red Skins.* Powder four ounces of the best white galls in a marble mortar, lifting it thro' a fine sieve. Mix the powder with about three quarts of water, and work the skins well in this mixture for half an hour or more, folding up the skins four-fold. Let them lie in this tan for 24 hours; when they must be worked again as before; then taken out, scraped clean on both sides from the first galls, and put into a like quantity of fresh galls and water. In this fresh mixture they must be again well worked for three quarters of an hour; then folded up as before, and left in the fresh tan for three days. On the fourth day they must be taken out, washed clean from the galls in seven or eight fresh quantities of water, and then hung up to dry.

7. *Manner of Dressing the Skins after they are tanned.* When the skins have been treated as above, and are very near dry, they should be scraped with the proper instrument or scraper on the flesh-side, to reduce them to a proper degree of thickness. They are then to be laid on a smooth board, and glazed by rubbing them with a smooth glass. After which they must be oiled, by rubbing them with olive-oil, by means of a linen rag, in the proportion of one ounce and a half of oil for four skins: they are then to be grained on a graining-board, lengthwise, breadthwise, and cornerwise, or from corner to corner.

8. *Preparations with Galls, for the Skins to be dyed*

*Yellow.* After the four skins are taken out of the drench of bran, and clean washed as before directed in the second article, they must be very well worked, half an hour or more, in a mixture of a pound and an half of the best white galls, finely powdered, with two quarts of clean water. The skins are then to be separately doubled lengthwise, rolled up with the flesh-side outwards, laid in the mixture, and close pressed down on each other, in which state they must continue two whole days. On the third day let them be again worked in the tan; and afterwards scraped clean from the galls, with an ivory or brass instrument (for no iron must touch them). They must then be put into a fresh tan, made of two pounds of galls finely powdered, with about three quarts of water, and well worked therein 15 times. After this they must be doubled, rolled up as before, and laid in the second tan for three days. On the third day a quarter of a pound of white sea-salt must be worked into each skin; and the skins doubled up as before, and returned into the tan, till the day following, when they are to be taken out, and well washed six times in cold water, and four times in water lukewarm. The water must be then well squeezed out, by laying the skins under pressure, for about half an hour, between two boards, with a weight of about 200 or 300 pounds laid upon the uppermost board, when they will be ready for the dye.

9. *Preparation of the Yellow Dye, in the proper proportion for four Skins.* Mix six ounces of cassia gehira (B), or dgehira, or the berries of the eastern rhamnus, with the same quantity of alum; and pound them together till they be fine, in a marble or brass mortar, with a brass pestle. Then dividing the materials, thus powdered, into three equal parts of four ounces each, put one of those three parts into about a pint and a half of water, in a china or earthen vessel, and stir the mixture together. Let the fluid stand to cool, till it will not scald the hand. Then spreading one of the skins flat on a table, in a warm room, with the grain-side uppermost, pour a fourth part of the tinging liquor, prepared as above directed, over the upper or grain-side, spreading it equally over the skin with the hand, and rubbing it well in. Afterwards do the like with the other three skins, for which the mixture first made will be sufficient.

This operation must be repeated twice more on each skin separately, with the remaining eight ounces of the powder of the berries, and alum, with the above mentioned due proportions of hot water, put to them as before directed.

The

(A) Shenan is a drug much used by dyers in the East; and may easily be procured at any of the ports of Syria and Africa, in the Levant. It is the Eastern jointed-kali, called by botanists *falicornia*; and grows in great plenty in those and other parts of the East. There is a lesser species of the *falicornia* on our coast, which, from its great affinity with the shenan, might be presumed to have the same qualities. On some trials, however, it has not appeared to answer the intention of the shenan; but it will not be prudent to pursue the examination of this further, as some unknown circumstances in the collecting or using the English *falicornia* might occasion the miscarriage. But be this as it may, the Eastern shenan may, at all events, be easily procured in any quantity, at a very trifling expence, by any of the captains of Turkey ships, at Aleppo, Smyrna, &c.

(B) The cassia gehira is the berries of an eastern rhamnus, or buckthorn-tree; and may be had at Aleppo, and other parts of the Levant, at a small price. The common Avignon or yellow berries may be substituted, but not with so good an effect; the cassia gehira being a stronger and brighter yellow dye, both for this use and also that of colouring paper-hangings, &c.

Leather,  
Leaven.

The skins, when dyed, are to be hung up on a wooden frame, without being folded, with the grain-side outwards, about three quarters of an hour to drain; when they must be carried to a river or stream of running water, and well washed therein six times or more. After this they must be put under pressure for about an hour, till the water be well squeezed out; afterwards the skins must be hung up to dry in a warm room.

This being done, the skins are to be dressed and grained as before directed for those dyed red; except the oiling, which must be omitted.

**Blacking LEATHER.** In the tanning of leather it is so much impregnated with the astringent parts of oak-bark, or with that matter which strikes a black with green vitriol, that rubbing it over three or four times with a solution of the vitriol, or with a solution of iron made in vegetable acids, is sufficient for staining it black. Of this we may be convinced by dropping a little of the solution on the unblackened side of common shoe-leather. This operation is performed by the currier; who, after the colouring, gives a gloss to the leather with a solution of gum-arabic and size made in vinegar. Where the previous astringent impregnation is insufficient to give due colour, and for those sorts of leather which have not been tanned, some galls or other astringents are added to the solution of iron; and in many cases, particularly for the finer sorts of leather, and for renewing the blackness, ivory or lamp-black are used. A mixture of either of these with linseed oil makes the common oil-blackening. For a shining blacking, small beer or water are taken instead of oil, in the quantity of about a pint to an ounce of the ivory-black, with the addition of half an ounce of brown sugar and as much gum-arabic. The white of an egg, substituted for the gum, makes the black more shining, but is supposed to hurt the leather, and make it apt to crack. It must be obvious, however, that all these compositions admit of a great many variations.

**Gilding of LEATHER.** Take glair of the whites of eggs, or gum water, and with a brush rub over the leather with either of them: then lay on the gold or silver, and, letting them dry, burnish them. See the articles GILDING and BURNISHING.

**To dress or cover LEATHER with Silver or Gold.** Take brown-red; grind or move it on a stone with a muller, adding water and chalk; and when the latter is dissolved, rub or lightly daub the leather over with it, till it looks a little whitish; and then lay on the leaf-silver or gold before the leather is quite dry, laying the leaves a little over each other, that there may not be the least part uncovered; and when they have well closed with the leather, and are sufficiently dried on and hardened, rub them over with an ivory polisher, or the foretooth of a horse.

**LEAVEN,** a piece of four dough, used to ferment and render light a much larger quantity of dough or paste. See BREAD, BARM, and BAKING.

Leaven was strictly forbidden by the law of Moses during the seven days of the passover; and the Jews, in obedience to this law, very carefully purified their houses from all leaven as soon as the vigil of the feast began. Nothing of honey or leaven was to have place in any thing presented to the Lord, upon his altar, during this solemnity. If, during the feast, the least

particle of leaven was found in their houses, they imagined the whole was polluted, for a little leaven leaveneth the whole lump. Leaven, in its figurative sense, signifies the bad passions of envy and malice, and rancour, which sour the temper, and extend their ferment over the social affections; whereas unleavened bread implies sincerity and truth. It is frequently used for any kind of moral contagion.

**LEAVES OF PLANTS.** See LEAF.

*Colours extracted from LEAVES.* See COLOUR-Making, n<sup>o</sup> 37.

**LEBADEA, or LEBADIA,** an ancient town of Bœotia, on the borders of Phocis, situated between Helicon and Chæroneæ, near Coronæa. In it stood the oracle of Jupiter Trophonius, which whoever went to consult, descended into a subterraneous gulf.

**LEBEDA,** an ancient sea-port town of Africa, in the kingdom of Tripoli, with a pretty good harbour, and an old castle, seated on the Mediterranean Sea; in E. Long. 14. 50. N. Lat. 32. 10.

**LEBEDOS,** reckoned among the twelve ancient cities of Ionia, was situated to the south of Smyrna. It was the residence of stage-players, and the place where they met from all parts of Ionia, as far as the Hellespont, and celebrated annual games in honour of Bacchus, (Strabo). It was overthrown by Lyfimachus, who removed the inhabitants to Ephesus; scarce ever after recovering itself, and becoming rather a village than a town, (Horace.)

**LEBEN, or LEBENA,** (anc. geog.) one of the port-towns of the Gortynians, near the promontory Leon, on the south-east side of Crete; famous for a temple of Æsculapius in imitation of that of Cyrenaica.

**LEBRIXA,** an ancient, strong, and pleasant town of Spain, in Andalusia; seated on a territory abounding in corn, wine, and a great number of olive-trees, of whose fruit they make the best oil in Spain. W. Lon. 5. 32. N. Lat. 36. 52.

**LEBUS,** a town of Germany, in the circle of Upper Saxony, and in the marquisate of Brandenburg, with a bishop's see, secularized in favour of the house of Brandenburg. It is seated on the river Oder, in E. Long. 14. 55. N. Lat. 52. 28.

**LECCE,** a rich, populous, and most beautiful town of Italy, in the kingdom of Naples and in the Terra d'Otranto, of which it is the chief place, and the see of a bishop. E. Long. 18. 20. N. Lat. 40. 38.

**LECCO,** a town of Italy, in the duchy of Milan, seated on the eastern side of the lake Como. E. Long. 9. 40. N. Lat. 45. 45.

**LECHLADE,** a town of Gloucestershire in England, seated at the confluence of the river Lech with the Thames. W. Long. 2. 15. N. Lat. 51. 42.

**LECHNICH,** a town of Germany in the circle of the Lower Rhine, and in the electorate of Cologne. E. Long. 6. 35. N. Lat. 50. 40.

**LECTI,** beds or couches, were of two kinds amongst the Romans, as being destined to two different uses, to lie upon at entertainments, and to repose upon for nightly rest. The first were called *lecti tricliniaries*, the other *lecti cubicularii*. See BEDS.

**LECTICA,** was a litter or vehicle, in which the Romans were carried. It was of two kinds, covered and uncovered. The covered lectica is called by Pliny

Leaves  
||  
Lectica.

Leſticarii  
||  
Lecturers.

ny *cubiculum viatorum*, a traveller's bed-chamber: And indeed we are informed that Auguſtus frequently ordered his ſervants to ſtop his litter that he might ſleep upon the road. This vehicle was carried by ſix or eight men called *leſticarii*. The *leſtica* differed from the *fella*, for in the firſt the traveller could recline himſelf for ſleep, in the latter he was obliged to fit. The *leſtica* was invented in Bithynia; the *fella* was a Roman machine, and eſteemed the more honourable of the two. *Leſtica* was alſo the name of the funeral bed or bier for carrying out the dead.

**LECTICARII**, among the Romans, ſervants who carried the **LECTICA**.

**LECTICARIUS** was alſo an officer in the Greek church, whoſe buſineſs it was to bear off the bodies of thoſe who died, and to bury them. Theſe were otherwiſe denominated *decani* and *copiata*.

**LECTIO**, *reading*. Conſidered in a medicinal view, it is ſaid by Celfus, lib. i. cap. 4. to be bad, eſpecially after ſupper, for thoſe whoſe heads are weak; and in lib. 1. cap. 8. he recommends reading with an audible voice for ſuch as have weak ſtomachs. It is alſo directed by Paulus *Æginctus* as an exerciſe, lib. 1. cap. 19.

**LECTISTERNIUM**, a ſolemn ceremony obſerved by the Romans in times of public danger, wherein an entertainment was prepared with great magnificence, and ſerved up in the temples. The gods were invited to partake of the good cheer, and their ſtatues placed upon couches round the table in the ſame manner as men uſed to fit at meet. The firſt *lectiſternium* held at Rome was in honour of Apollo, Latona, Diana, Hercules, Mercury, and Neptune, to put a ſtop to a contagious diſtemper which raged amongſt the cattle, in the year of Rome 354. At theſe feaſts the *Epuloſes* preſided, and the ſacred banquet was called *epulum*. See **EPULO**, **EPULUM**, &c.

Something like the *lectiſternium* was occaſionally obſerved amongſt the Greeks, according to Caſaubon.

**LECTORES**, among the Romans, ſervants in great mens houſes, who were employed in reading while their maſters were at ſupper. They were called by the Greeks **ANAGNOSTÆ**.

**LECTOURE**, an ancient and ſtrong town of France, in Gaſcony, with a caſtle and a biſhop's ſee; ſeated on a mountain at the foot of which runs the river Gers. E. Long. 0. 42. N. Lat. 43. 56.

**LECTURERS**, in England, are an order of preachers in pariſh churches, diſtinct from the rector, vicar, and curate. They are choſen by the veſtry, or chief inhabitants of the pariſh, ſupported by voluntary ſubſcriptions and legacies, and are uſually the afternoon preachers in the Sunday ſervice. The term is alſo more generally applied to thoſe who preach on Sunday, or on any ſtated day of the week, in churches, or other places of public worſhip. By 13 & 14 Car. II. cap. 4. lecturers in churches, unlicensed, and not conforming to the liturgy, ſhall be diſabled, and ſhall alſo ſuffer three months imprifonment in the common gaol; and two juſtices, or the mayor in a town corporate, ſhall, upon certificate from the ordinary, commit them accordingly. Where there are lectures founded by the donations of pious perſons, the lecturers are appointed by the founders without any interpoſition

or conſent of rectors of churches, &c. though with the leave and approbation of the biſhop; ſuch as that of Lady Moyer's at St Paul's. But the lecturer is not intitled to the pulpit, without the conſent of the rector or vicar, who is poſſeſſed of the freehold of the church.

**LEDA**, (fab. hiſt.) a daughter of king Theſpius and Eurythemis, who married Tyndarus king of Sparta. She was ſeen bathing in the river Eurotas by Jupiter, when ſhe was ſome few days advanced in her pregnancy, and the god, ſtruck with her beauty, reſolved to deceive her. He perſuaded Venus to change herſelf into an eagle, while he aſſumed the form of a ſwan, and after this metamorphoſis Jupiter, as if fearful of the tyrannical cruelty of the bird of prey, fled through the air into the arms of Leda, who willingly ſheltered the trembling ſwan from the aſſaults of his ſuperior enemy. The careſſes with which the naked Leda received the ſwan, enabled Jupiter to avail himſelf of his ſituation, and nine months after this adventure the wife of Tyndarus brought forth two eggs, of one of which ſprung Pollux and Helena, and of the other Caſtor and Clytemneſtra. The two former were deemed the offspring of Jupiter, and the others claimed Tyndarus for their father. Some mythologiſts attribute this amour to Nemefis and not to Leda; and they farther mention, that Leda was entrusted with the education of the children which ſprung from the eggs brought forth by Nemefis. To reconcile this diversity of opinions, others maintain that Leda received the name of *Nemefis* after death. Homer and Heſiod make no mention of the metamorphoſis of Jupiter into a ſwan, whence ſome have imagined that the fable was unknown to theſe two ancient poets, and probably invented ſince their age.

**LEDBURY**, a town of Herefordſhire in England. It is a well-built town ſeated on a rich clay ſoil, and inhabited moſtly by clothiers, who carry on a pretty large trade. W. Long. 2. 27. N. Lat. 52. 6.

**LEDESMA**, an ancient and ſtrong town of Spain, in the kingdom of Leon, ſeated on the river Tome, in W. Long. 5. 25. N. Lat. 47. 2.

**LEDGER**, the principal book wherein merchants enter their accounts. See **BOOK-KEEPING**.

**LEDUM**, **MARSH CISTUS**, or *Wild Roſemary*: A genus of the monogynia order, belonging to the decandria claſs of plants; and in the natural method ranking under the 18th order, *Bicornes*. The calyx is quinqueſid; the corolla plain and quinquepartite; the capſule quinquelocular, and opening at the baſe. There is but one ſpecies, viz. the paluſtre, with very narrow leaves. This grows naturally upon bogs and moſſes in many parts of Yorkſhire, Cheſhire, and Lancaſhire; riſing with a ſlender ſhrubby ſtalk about two feet high, dividing into many ſlender branches, garniſhed with narrow leaves, not much unlike thoſe of heath. The flowers are produced in ſmall cluſters at the end of the branches, and are ſhaped like thoſe of the ſtrawberry-tree, but ſpread open wider at top. Theſe are of a reddiſh colour, and in the natural places of their growth are ſucceeded by ſeed-veſſels filled with ſmall ſeeds which ripen in autumn.—This plant is with great difficulty kept in a garden; for as it naturally grows upon bogs, unleſs the plants have a ſimilar ſoil they will not thrive. They muſt be procured from the places of their

Leda  
||  
Ledum.

*Lee.* their growth, and taken up with good roots, otherwise they will not live.

LEE, an epithet used by seamen to distinguish that part of the hemisphere to which the wind is directed, from the other part whence it arises; which latter is accordingly called *to windward*. This expression is chiefly used when the wind crosses the line of a ship's course, so that all on a side of her is called *to windward*, and all on the opposite side *to leeward*. Hence,

*Under the LEE*, implies farther to the leeward, or farther from that part of the horizon whence the wind blows: as,

*Under the LEE of the Shore*; i. e. at a short distance from the shore which lies to windward. This phrase is commonly understood to express the situation of a vessel anchored, or sailing under the weather-shore, where there is always smoother water, and less danger of heavy seas, than at a great distance from it.

*LEE-Larches*, the sudden and violent rolls which a ship often takes to the leeward in a high sea, particularly when a large wave strikes her on the weather-side.

*LEE-Side*, all that part of a ship or boat which lies between the mast and the side farthest from the direction of the wind; or otherwise, the half of a ship, which is pressed down towards the water by the effort of the sails, as separated from the other half by a line drawn through the middle of her length. That part of the ship which lies to windward of this line is accordingly called the *weather-side*. Thus admit a ship to be sailing southward, with the wind at east, then is her starboard or right side the *lee-side*; and the larboard, or left, the *weather-side*.

*LEE-Stone*. See *LEE-Penny*.

*LEE-Way*. See *NAVIGATION*.

LEE (Nathaniel), a very eminent dramatic poet of the last century, was the son of a clergyman, who gave him a liberal education.—He received his first rudiments of learning at Westminster school; from whence he went to Trinity-college, Cambridge.—Coming to London, however, his inclination prompted him to appear on the theatre; but he was not more successful in representing the thoughts of other men, than many a genius besides, who have been equally unfortunate in treading the stage, although they knew so well how to write for it. He produced 11 tragedies, all of which contain a very great portion of true poetic enthusiasm. None, if any, ever felt the passion of love more truly; nor could any one describe it with more tenderness. Addison commends his genius highly; observing, that none of our English poets had a happier turn for tragedy, although his natural fire and unbridled impetuosity hurried him beyond all bounds of probability, and sometimes were quite out of nature. The truth is, this poet's imagination ran away with his reason; so that at length he became quite crazy; and grew so mad, that his friends were obliged to confine him in bedlam, where he made that famous witty reply to a coxcomb scribbler, who had the cruelty to jeer him with his misfortune, by observing that it was an easy thing to write like a madman:—"No (said Lee), it is not an easy thing to write like a madman; but it is very easy to write like a fool." Lee had the good fortune to recover the use of his reason so far as to be discharged from his melancholy confinement; but he

did not long survive his enlargement, dying at the early age of 34. Cibber, in his *Lives of the Poets*, says he perished unfortunately in a night-ramble in London streets.—His Theodosius and Alexander the Great are stock-plays, and to this day are often acted with great applause. The late Mr Barry was particularly fortunate in the character of the Macedonian Hero.

*LEE-Penny*, or *Lee-stone*, a curious piece of antiquity belonging to the family of Lee in Scotland, and of which the following account has been given in the *Gentleman's Magazine* for December 1787.

It is a stone of a dark red colour and triangular shape, and its size about half an inch each side. It is set in a piece of silver coin, which, though much defaced, by some letters still remaining is supposed to be a shilling of Edward I. the cross being very plain, as it is on his shillings.—It has been, by tradition, in the Lee family since the year 1320 odds; that is, a little after the death of King Robert Bruce, who having ordered his heart to be carried to the Holy Land, there to be buried, one of the noble family of Douglas was sent with it, and it is said got the Crowned Heart in his Arms from that circumstance: but the person who carried the heart was Simon Locard of Lee, who just about this time borrowed a large sum of money from Sir William de Lendfay, prior of Air, for which he granted a bond of annuity of ten pounds of silver, during the life of the said Sir William de Lendfay, out of his lands of Lee and Cartland. The original bond, dated 1323, and witnessed by the principal nobility of the country, is still remaining among the family papers.

As this was a great sum in those days, it is thought it was borrowed for that expedition; and, from his being the person who carried the royal heart, he changed his name to *Lockheart*, as it is sometimes spelled, or *Lockhart*, and got a heart within a lock for part of his arms, with the motto *Corda serata paudo*.—This Simon Lockhart having taken prisoner a Saracen prince or chief, his wife came to ransom him; and on counting out the money or jewels, this stone fell out of her purse, which she hastily snatched up; which Simon Lockhart observing, insisted to have it, else he would not give up his prisoner.—Upon this the lady gave it him, and told him its many virtues, viz. that it cured all diseases in cattle, and the bite of a mad dog both in man and beast. It is used by dipping the stone in water, which is given to the diseased cattle to drink; and the person who has been bit, and the wound or part infected, is washed with the water. There are no words used in the dipping of the stone, nor any money taken by the servants, without incurring the owner's displeasure. Many are the cures said to be performed by it, and people come from all parts of Scotland, and even as far up in England as Yorkshire, to get the water in which the stone is dipped, to give their cattle, when ill of the murrain especially, and black-leg.—A great many years ago, a complaint was made to the ecclesiastical courts against the laird of Lee, then Sir James Lockhart, for using witchcraft.—It is said, when the plague was last at Newcastle, the inhabitants sent for the Lee-penny, and gave a bond for a large sum in trust for the loan; and that they thought it did so much good, that they offered to pay the money, and keep the Lee-penny; but

Lee

Lee's.

Lee's,

Lee's.

the gentleman would not part with it. A copy of this bond is very well attested to have been among the family papers, but supposed to have been spoiled, along with many more valuable ones, about 50 years ago, by rain getting into the charter-room, during a long minority, and no family residing at Lee.

The most remarkable cure performed upon any person, was that of Lady Baird of Saughtonhall, near Edinburgh; who having been bit by a mad dog, was come the length of a hydrophobia; upon which, having sent to beg the Lee-penny might be sent to her house, she used it for some weeks, drinking and bathing in the water it was dipped in, and was quite recovered. This happened above 80 years ago; but it is very well attested, having been told by the lady of the then laird of Lee, and who died within these thirty years. She also told, that her husband Mr Lockhart, and she, were entertained at Saughtonhall by Sir Robert Baird and his lady, for several days, in the most sumptuous manner, on account of the lady's recovery, and in gratitude for the loan of the Lee-penny so long, as it was never allowed to be carried away from the house of Lee.

N.B. It was tried by a lapidary, and found to be a stone; but of what kind he could not tell.

LEECH, in zoology. See **HIRUDO**.

LEECHEs in a ship, the borders or edges of a sail which are either sloping or perpendicular.

The leeches of all sails whose tops and bottoms are parallel to the deck, or at right angles to the mast, are denominated from the ship's side, and the sail to which they belong; as the *starboard-leech* of the main-sail, the *lee-leech* of the fore-top-sail, &c. But the sails which are fixed obliquely on the masts have their leeches named from their situation with respect to the ship's length; as the *fore-leech* of the mizen, the *after-leech* of the jib or fore-stay sail, &c.

**LEECH-Lines**, certain ropes fastened to the middle of the leeches of the main-sail and fore-sail, and communicating with blocks under the opposite sides of the top, whence they pass downwards to the deck, serving to truss up those sails to the yard as occasion requires. See **BRAILS**.

**LEECH-Rope**, a name given to that part of the bolt-rope to which the border or skitt of a sail is sewed. In all sails whose opposite leeches are of the same length, it is terminated above the earing, and below the clue. See **BOLT-Rope**, **CLUE**, and **EARING**.

**LEEDS**, a town of the West Riding of Yorkshire, 196 miles from London, has a magnificent stone-bridge over the river Aire to the suburbs. It was incorporated by King Charles I. with a chief alderman, nine burgesses, and 20 assistants; and by Charles II. with a mayor, 12 aldermen, and 24 assistants. It has been a long time famous for the woollen manufacture, and is one of the largest and most flourishing towns in the county, yet had but one church till the reign of Charles I. By the late inland navigation, it has communication with the rivers Mersey, Dee, Ribble, Ouse, Trent, Darwent, Severn, Humber, Thames, Avon, &c. which navigation, including its windings, extends above 500 miles in the counties of Lincoln, Nottingham, Lancaster, Westmoreland, Chester, Stafford, Warwick, Leicester, Oxford, Worcester, &c. Here is a long street full of shops, and a hall for the

fale of cloth, built in 1758. The merchants of this place, York, and Hull, ship them off at the latter, for Holland, Hamburg, and the north. After ringing of the market-bell at six or seven in the morning, the chapmen come and match their patterns, when they treat for the cloth with a whisper, because the clothiers' standings are so near each other; and perhaps 20,000l. worth of cloth is sold in an hour's time. At half an hour after eight the bell rings again, when the clothiers make room for the linen-draper, hardware-men, shoemakers, fruiterers, &c. At the same time the shambles are well stored with all sorts of fish and flesh; and 500 horse loads of apples have been counted here in a day. There is a magnificent hall, where they also sell great quantities of white cloth; and here is a noble guildhall, with a fine marble statue of Queen Anne, erected about the year 1714. Its river being navigable by boats, they send other goods, besides their cloth, to Wakefield, York, and Hull, and furnish York with coals. There is a house called *Red-ball*, because it was the first brick-building in the town, and K. Charles I. had an apartment in it, which is ever since called the *King's chamber*. There is another place called *Tower-hill*, on which there was once a tower; besides which, there was a castle which King Stephen besieged in his march to Scotland. Here was also a park, where are now inclosures. There is a workhouse here of free-stone, where poor children are taught to mix wool, and perform other easy branches of that manufacture, and a part of it has been used many years as a hospital for the reception of the aged poor. Here are three alms-houses, and two charity-schools of blue-coat boys to the number of 100. In the ceiling of St Peter's, its only parochial church, the delivery of the law to Moses is finely painted in fresco by Parmentier. It is a venerable free-stone pile built in the cathedral fashion, and seems to have been the patch-work of several ages. The increase of building in Leeds in the year 1786, was nearly 400 houses. There is a Presbyterian meeting-house here, erected in 1691, called the *new chapel*, which is the stateliest, if not the oldest, of that denomination in the north of England; and in the town and its suburbs are several other meeting houses, as is always observable in towns of great trade and manufacture. It is noted for some medicinal springs; one of which, called *St Peter's*, is an extreme cold one, and has been very beneficial in rheumatisms, rickets, &c. Here is an hospital for relief of the poor, who had been honest and industrious, endowed with 80l. a-year, besides 10l. a-year for a master to read prayers and instruct them; also a free school. Its markets are Tuesdays and Saturdays, and the market-laws are more strictly observed here than any where. It has two fairs in the year. Leeds, though a large town, sends no members to parliament.

LEEK, in botany. See **ALLUM**.

**LEEK**, a town of Staffordshire in England, 155 miles from London. It lies among the barren moorlands, has a manufacture of buttons, a market on Wednesday, and 7 fairs in the year. In the church-yard, at the south-east corner of the chancel, are the remains of a Danish cross, now upright, and 10 feet high from the ground, beneath which are three steps. In Blue-hills in the neighbourhood are coal-mines; and

Leer  
||  
Leeuw.

and a salt stream comes from thence, which tinges the stones and earth through which it runs with a rusty colour, and, with the infusion of galls, turns as black as ink. Here are rocks of a most surprising height, without any turf or mould upon them.

LEER, in glass-making, a sort of third furnace, intended to anneal and cool by proper degrees the vessels when made. This properly comprehends two parts, the tower and leer. The tower is that part which lies directly above the melting-furnace, with a partition between them of a foot thick, in the midst whereof there is a round hole, placed exactly over the furnace, through which the flame and heat pass into the tower: on the floor of this tower the vessels are set to anneal. There are two openings by which the vessels are put into this tower; and after standing there some time they are put into iron pans, which by degrees are drawn out all along that part of this furnace, which is properly called the leer; which is five or six yards long, that the vessels may cool by degrees. This leer is continued to its tower and arched all along, and is about four feet wide, and high within. The glasses are cool by that time they are come to the mouth of this, which enters into a room where the glasses are placed when taken out.

LEES, the grossest and most ponderous parts of liquors, which, being separated by fermentation, fall to the bottom. The word comes from the French *lie*; and that either from *limus* "mud," or from *Lycus* one of the surnames of Bacchus; or, according to du Cange, from *lia*, a corrupt Latin word signifying the same.—The vinegar-makers make a great trade of the lees of wine dried and made into cakes, after having squeezed out the remains of the liquor in presses.

LEET, or COURT LEET (*leta visus franci plegii*), is a court of record, ordained for punishing offences against the crown; and is said to be the most ancient court of the land. It inquires of all offences under high treason; but those who are to be punished with loss of life or member, are only inquirable and presentable here, and to be certified over to the justices of assize, (Stat. 1. Edw. III.). And this court is called the view of frank pledge, because the king is to be there certified by the view of the steward, how many people are within every leet, and have an account of their good manners and government; and every person of the age of 12 years, who hath remained there for a year and a day, may be sworn to be faithful to the king, and the people are to be kept in peace, &c. A leet is incident to a hundred, as a court baron to a manor: for by grant of a hundred, a leet passeth; and a hundred cannot be without a leet.—The usual method of punishment in the court-leet, is by fine and amerement; the former assessed by the steward, and the latter by the jury.

LEEUW (William de), an eminent engraver of the last century. He was a native of Flanders, and the disciple of Soutman, whose manner of engraving, or rather etching, he imitated. His prints generally appear harsh at first sight; but grow into favour upon examination, and several of them have great effect; particularly his Daniel in the lion's den, a large plate lengthwise, from Rubens. The first impressions of this plate are before the name of Dankertz was added, and are now extremely rare and dear.

LEEWARD Ship, a vessel that falls much to leeward of her course, when sailing close-hauled, and consequently loses much ground.

To LEEWARD, towards that part of the horizon which lies under the lee, or whither the wind bloweth. Thus, "We saw a fleet under the lee," and, "We saw a fleet to leeward," are synonymous expressions.

LEG, in anatomy, the whole lower extremity from the acetabula of the ossa innominata, commonly divided into three parts, viz. the thigh, the leg properly so called, and the foot. See ANATOMY, n<sup>o</sup> 60.

LEGACY, in Scots law, a donation by one person to another, to be paid by the giver's executor after his death. See LAW, n<sup>o</sup> clxxxii, 3.

LEGATE, a cardinal or bishop, whom the pope sends as his ambassador to sovereign princes. See AMBASSADOR.

There are three kinds of legates, viz. legates *a latere*, legates *de latere*, and legates by office, or *legati nati*: of these the most considerable are the legates *a latere*, the next are the legates *de latere*. See the article LATERE.

Legates by office are those who have not any particular legation given them; but who, by virtue of their dignity and rank in the church, become legates: such are the archbishop of Rheims and Arles; but the authority of these legates is much inferior to that of the legates *a latere*.

The power of a legate is sometimes given without the title. Some of the nuncios are invested with it. It was one of the ecclesiastical privileges of England from the Norman conquest, that no foreign legate should be obtruded upon the English, unless the king should desire it upon some extraordinary emergency, as when a case was too difficult for the English prelates to determine.

The term *legate* comes from *legatus*, which Varro derives from *legere*, "to choose;" and others from *legare*, *delegare*, "to send, delegate."

Court of the LEGATE, was a court obtained by Cardinal Woolsey of Pope Leo X. in the ninth year of Henry VIII. wherein he, as legate of the pope, had power to prove wills, and dispense with offences against the spiritual laws, &c. It was but of short continuance.

LEGATEE, in Scots law, the person to whom a legacy is provided.

LEGATIO LIBERA, was a privilege frequently obtained of the state, by senators of Rome, for going into any province or country, upon their own private business, in the quality of *legati* or envoys from the senate, that the dignity of this nominal office might secure them a good reception, and have an influence on the management of their concerns. The cities and towns through which they passed were obliged to defray their expences.—This was called *libera legatio*, because they might lay aside the office as soon as they pleased, and were not encumbered with any actual trust.

LEGATUS, a military officer amongst the Romans, who commanded as deputy of the commander in chief. The *legati*, at their first institution, were not so much to command as to advise. They were generally chosen by the consuls, with the approbation of

Leeward  
||  
Legatus.

*Legend.* the senate. As to the number of the *legati*, we have no certain information, though we may upon good grounds assign one to every legion. In the absence of consul or proconsul, they had the honour to use the *fasces*.

Under the emperors there were two sorts of *legati*, *consulares*, and *pratorii*. The first commanded whole armies, as the emperors lieutenant-generals; and the other had the command of particular legions.

The *legati* under the proconsuls in the provinces, served for judging inferior causes, and management of smaller concerns, remitting things of great moment to the governor or president himself. This was the original office of the *legati*, as was hinted above; though, as we have seen, they were afterwards admitted to command in the army.

LEGEND, any idle or ridiculous story told by the Romanists concerning their saints, and other persons, in order to support the credit of their religion.

The legend was originally a book used in the old Romish churches, containing the lessons to be read at divine service; hence the lives of the saints and martyrs came to be called *legends*, because chapters were read out of them at matins, and at the refectories of religious houses. Among these the golden legend, which is a collection of the lives of the saints, was received in the church with great applause, which it maintained for 200 years; though it is so full of ridiculous and romantic stories, that the Romanists themselves are now ashamed of it.

LEGEND is also used by authors to signify the words or letters engraven about the margins, &c. of coins. Thus the legend of a French crown is, *SIT NOMEN DOMINI BENEDICTUM*; that of a moidore, *IN HOC SIGNO VINCES*: on those of the last emperors of Constantinople, we find

IESVS CHRISTVS BASILEVS BASILEON, IHS XPS NIKA, IESVS CHRISTVS VINCIT. *Legend.*

LEGEND is also applied to the inscription of medals, which serves to explain the figures or devices represented on them. In strictness, the legend differs from the inscription; this last properly signifying words placed on the reverse of a medal, in lieu of figures.

It seems as if the ancients had intended their medals should serve both as images and as emblems; the former for the common people, and the other for persons of taste and parts; the images to represent the faces of princes; emblems their virtues and great actions; so that the legend is to be looked on as the soul of the medal, and the figures as the body.

Every medal has properly two legends; that on the front, and that on the reverse. The first generally serves only to distinguish the person by his name, titles, offices, &c. the latter is intended to express his noble and virtuous sentiments, his good deeds, and the advantages the public has reaped by him. This, however, does not hold universally; for sometimes we find the titles shared between both sides, and sometimes also the legend.

In the medals of cities and provinces, as the head is usually the genius of the place, or at least some deity adored there, the legend is the name of the city, province, or deity, or of both together; and the reverse is some symbol of the city, &c. frequently without a legend, sometimes with that of one of its magistrates.

Legends generally commemorate the virtues of princes, their honour and consecrations, signal events, public monuments, deities, vows, privileges, &c. which are either in Latin or Greek, or a mixture of both, and are intended to eternize their names, and the benefits done by them to the empire.

## L E G E R D E M A I N,

### OR SLEIGHT OF HAND;

A DENOMINATION given to certain deceptive performances, which either depend altogether on dexterity and address, or derive but a small degree of aid from philosophical principles. Of these we shall present our readers with a selection of the best that have been either explained in books or publicly exhibited.

#### SECT. I. Performances with Cups and Balls.

THE following method of exercising this simple and ingenious amusement is that practised by one Mr Kopp a German, whose performances are deservedly preferred to those of former artists. In this, however, as in all the other branches belonging to the art of legerdmain, it is not sufficient that a person has the requisite dexterity, or sleight of hand; it is necessary also to take off the attention of the spectators by some entertaining discourse; which not only prevents discovery, but adds greatly to the amusement of the company; for which reason, such discourse is inserted in this article.

To play his part properly, the performer on cups and balls ought to provide himself with a bag about 12 inches long, and from eight to ten in depth. The inside must be furnished with a number of pockets for holding the several articles necessary in the amusement; and this bag the performer must hang before him.

The materials necessary for the performer are,

1. Three white polished tin-cups, represented by A, B, and C (fig. 1.) in the shape of a truncated cone with a double ledge D towards the base. This ledge, which is about half an inch in breadth, serves to raise the cups easily by, admitting also the hand to pass a small cork-ball (see fig. 5.) The upper part E of the cup ought to be hollowed in the form of a sphere, sufficient to contain the balls without their appearing above the upper edge of the cups.

2. It is also necessary to have a small rod, called *Jacob's Staff*; which is usually made of ebony, and neatly tipped with ivory at both ends. This is frequently used for striking on the cups; and being held in the hand where the balls are also kept, it gives the operator an

oppor-

Plate  
CCLXV

Exclimi-  
nary expla-  
nations.

opportunity of keeping that hand generally shut, or of varying its position, in order to avoid being discovered. The balls are made of cork, blackened by slight burning on the outside.

The dexterity in performing this operation consists in artfully secreting a ball in the right hand, and making it to appear or disappear in the same hand. The secreting it between the fingers is called *conjuring the ball*, at which time the spectators are to suppose that it is kept in the other hand, or that it was passed under a cup; but if it is made to reappear when held secretly in the hand, they must believe that it came out of the place last touched by the fingers.

*Conjuring the ball* is performed by putting it between the place of the thumb A and the finger B (fig. 2.), conveying it with the thumb, by rolling it upon the fingers the length of the line BC, moving the middle finger D to a distance, and placing the ball at the junction of the fingers C (fig. 3.); but in this part of the operation it is necessary to hold the ball rather tight, lest it should fall down and discover the secret. In order to make it appear, we must bring back the ball the same way from C to D; and every time that it is conjured, or made to disappear, as well as when it is made to reappear, the palm of the hand should be turned from the side of the table on which the operator is playing.

While this part of the trick is performing, the operator must let the spectators know that the ball has been passed under a cup, or into another hand; and in the first case he makes a motion with the hand (as represented fig. 4.) indicating that he had thrown it through the cup; at which time also he conjures it, approaching the two fingers of the right hand towards the left, which last he holds open, and makes a motion as if the ball had been placed there, shutting the left hand instantly. It is also to be supposed, at every time when a ball seems to be placed below a cup, that it has been held in the left hand; and when he raises the cup with the right hand as in fig. 5. the left hand must be opened, and he rests the ball at that instant upon the hollow of the other, sliding it along the fingers.

At the time the ball is to be put secretly under the cup, it should lie between the two fingers of the right hand (fig. 5.) With this hand he raises the cup; and placing it on the table, lets go the ball, which, according to its position in fig. 6. should be found near the edge of the cup when taken into the hand. If he would put the ball secretly between the two cups, it must be let go by jerking it towards the bottom of the cup which he holds, and places it very quickly on that in which the ball is to be found. When the ball is in this situation, if the operator should want it to disappear, he must raise the two cups with his right hand, and draw out hastily that under which the ball is placed; at the same instant lowering with his left hand the other cup, under which he places it.

In speaking of the tricks which follow, terms are made use of which explain whether what is said be feigned or true; of which terms explanations are given, and numbers adapted to the explanations of the different operations which follow.

I. *To put the ball under the cup*: Really done, with the fingers of the right or left hand.

II. *To put the ball under the cup, or in the hand.*—

A feigned conjuration; pretending to shut it up in the left hand, which is afterwards opened, in order to have it supposed that the ball is under the cup or elsewhere. See fig. 3.

III. *To pass the ball under the cup.*—The ball supposed to be conjured is to be really introduced.

IV. *To pass the ball between the cups*, is likewise real.

V. *To make the ball which is between the cups disappear.*—This is likewise real; and performed, as has already been described, by drawing back with much precipitation and dexterity the cup on which it is placed, and lowering upon the table that which is above, and under which the ball must of consequence be found.

VI. *To take the ball.* Real.—It is taken between two fingers of the right-hand, and shown before conjuration.

VII. *To take away the ball from under the cup.* This is done by taking it away in the sight of the spectators.

VIII. *To draw the ball.* Feigned; or by pretending to draw it from the end of the rod, from the cup, or any other place, by bringing into the fingers the ball which was secreted.

IX. *To throw the ball through the cup*, is to conjure it in pretending to throw it.

X. *To raise up the cups.* This is really done in three ways; viz. either with the right hand, the rod, or the left hand. The first is when the ball is to be secretly inserted in returning the cup to its place. In the second, the rod is to be put on the tops of the cups to turn them over again, so that the balls may be shown which were to be passed into them. The third is when the operator intends to show that no balls are in the cups, or that there are some.

XI. *To cover a cup.* This is really done, by taking with the right hand that which is to be put over another, and introducing at the same time a ball between the two.

XII. *To recover a cup.* It is done by taking with the left hand the cup to be put over or above, without introducing any thing into it.

#### The PERFORMANCES.

I. *To put a ball under each cup, and take it out again.* Having placed on the table the three cups and little rod, as shown in fig. 1. the performer must begin his manœuvres, by endeavouring to amuse the spectators with some kind of entertaining discourse. Nothing can be more *a-propos* than the origin of the little rod and cups; and he must be very assiduous in this sort of discourse to take off the eyes of the spectators as much as possible. The following may be a specimen of the manner in which he ought to address his audience: "There are many persons who meddle with the play of the cups and balls, and yet know nothing about them. This is by no means extraordinary: even I who now play before you, pretend to know but little. Nay, some time ago, I was such a novice as to think of playing before a numerous assembly with glass cups, in which you may guess I did not meet with great applause. I do not indeed practise this method but before such as are actually blind; neither do I play with China cups, lest, through awkwardness in feigning to break their handles, I should do so in reality. These are the cups which answer my purposes. They are made of such metal as the alchymists attributed to Jupiter

Performances.

Jupiter and Mars, or, to speak more properly and intelligibly, they are made of tin. Behold and examine these cups (*showing the cups to the company, and putting them on the table*;) All my science, and it is in that in which it is admirable, consists in deceiving the eyes, and passing the balls into the cups without your perceiving how it is done. I advise you therefore to pay no attention to my words, but to examine well my hands, (*showing his hands*). If there is in this company any person who has the misfortune to use spectacles, he may retire; but the most clear-sighted will see nothing there.

“Here is the little Jacob’s rod (*showing the rod with the left hand*); that is to say, the magazine from which I take all my balls (*taking secretly with the other hand a ball from his bag, which he hides between his fingers*). There is not one in England so well furnished. Observe, that the more I take from it the more remain: I draw from it (VIII.) this ball, (*showing it, and placing it upon the table, (1.)*) Observe that there is nothing under the cups (*showing the inside of the cups*), and that I have no other ball in my hands, (*showing his hands*). I take (VI.) this ball: I put it (II.) under this first cup. I draw (VIII.) a second ball from my little rod, and I put it under this second cup (*actually done*). It is proper here to tell you, that the generality of those who play the cups only feign to put the balls there; but I do not deceive you, and I actually put them there. (*He raises the cup B, and taking the ball which he has put under it into his right-hand fingers, shows it to the company*). I return it (II.) under the same cup. I take (VIII.) this third, and put it (II.) in the same way under this last cup. You are about to say that this is not very extraordinary, and that you could do it as well yourselves. I agree with you; but the difficulty consists in taking out these balls again through the cups, (*striking the first cup with the rod*). I take (VIII.) this first ball (*showing it*): I put it (II.) into my hand, and send it to Constantinople, (*he opens the left hand*). I take (VIII.) this. (*striking with the rod on the second cup*). I put it (II.) into my hand, and I send it to the East Indies, (*opening his left hand*). I take (VIII.) the last, and I put it (1.) on the table: Observe that there are no more under any of these cups, (*turning down the cups with the rod*).

2. *With the single ball remaining on the table, to pass a ball through each of the cups, and to take it off from the same.* “I return the cups to their places, and take (VI.) this ball, and I put it under this first cup. I take it back again (VIII.): observe that it is not there now, (*raising (X.) the cup with the left hand*). I put it (II.) under this other cup: I take it out again (VIII.) in the same manner, (*raising (X.) the cup*). I put it (II.) under the last cup, and take it out again, (VIII.) (*raising the last cup with the left hand, and placing the ball on the table*).

3. *With the single ball remaining on the table, to take away a ball through two or three cups.*—In this performance the three cups are distinguished by A, B, C, as in fig. 1.

“I never have any ball secreted in my hands, as the greatest part of them who play the cups and balls have (*showing his hands*). I take (VI.) this ball, and

I put it (II.) under this cup B. I cover it (XII.) with this cup C, and I take again (VIII.) this ball thro’ the two cups (*showing the ball in placing it on the table, returns afterwards the cup C to its place, and raises (X.) the cup B to show that there is nothing there*). I take again (VI.) this same ball. I put it (II.) under the same cup B: I cover it (XII.) with the two other cups C and A; and I take out (VIII.) this ball through the three cups (*showing it and placing it on the table*).

4. *With the single ball remaining on the table, to pass the same ball from cup to cup.*—“I now beg of you to pay every possible attention, and you will very distinctly see this ball pass from one cup into the other (*putting the cups at a greater distance from each other*). I take (VI.) this ball, and I put it (II.) under the cup C: there is nothing under this cup B (*raising it, introducing the ball, and taking the rod in his hand*). I command that which I have put under the cup C to pass under that B. You see it (*moving the end of the rod from one cup to the other, as if he followed the ball*): observe that it is passed (*raising the cup with his left hand, and taking the ball with his right, shows it to the company*). I return it (II.) under this cup B; there is nothing under this A (*raising the cup with his right hand, and introducing the ball there*). I am going to pass it under this last cup A. Look well; come near; (*making as if in seeing it he would show with the end of the rod the path that it took*). You did not see it pass? I am not much surpris’d: I did not see it myself; however, here it is under the cup (*raising the cup A, and placing it on the table*).

5. *With the same ball remaining on the table. The cups being covered, to pass a ball from one into the other, without raising them up.*—“I was very right in telling you, that the most clear-sighted would not see very much; but, for your comfort, here is a trick in which you will see nothing at all. I take this ball, and put it (II.) under this cup B. I cover it (XI.) with the two other cups (*taking one in each hand, and introducing the ball upon the cup B*): pay attention, that there is absolutely nothing in my hands (*showing them*). I command this ball to mount up upon the first cup (*taking up the two cups, and putting them in their places, he shows that it has mounted*). I return (II.) this ball under the same cup B. I cover it as before (*covers it in taking a cup in each hand, and introducing a ball between the second and third cup*). I take (*the only ball with which he plays being under the third cup, he cannot show it, but acts as if he had taken it out, and put it into the fingers of his left hand, which he holds in the air, in conducting the hand from one side to the other*). I take the ball, which is under these three cups; and I throw it thro’ the first cup (*feigning to throw it*): observe that I have not conjured the ball, having nothing in my hands (*showing them*); it is passed, however, (*raising the first cup with the left hand, putting the ball upon the table and the cups in their places*).

6. *With the single ball remaining on the table, to pass a ball through the table and two cups.*—“You are undoubtedly surpris’d, that, having but a single ball, I have been able, after having shown it to you, to pass it under this cup without raising it; but let not that astonish you: I have secrets much more wonderful. I

convey,

convey, for example, the fteeples of one village into another: I have fymphathetic quadrants, with which a converfation may be held at 200 leagues diftance: I have a flying chariot which can conduct me to Rome in three days. I will fhew all thefe curiofities as foon as my machines are entirely completed; that is to fay, in a few centuries; but to amufe you till the arrival of all thefe prodigies, I now continue the entertainment of the cups and balls. I put (II.) this ball under the cup A. I take it away again (VII.) (*fhewing it, and feigning to put it into his left-hand fingers*). I cover (XI.) this cup with the two others B and C (*introducing the ball between thefe two cups, ufing always the right hand, and feigning ftill to hold it in his left*), and I pafs this fame ball through the table and the two cups (*putting the left hand under the table*.) There it is paffed (*raifing the ftir cup*.)

7. *With the fame ball. A ball having been put under a cup, to take it away again, and to pafs it between two others.*—“Here is again a very pretty trick: I take this ball, and I put it (II.) under this cup A. Obferve, that there is nothing under the others (*fhewing them and introducing the ball under the cup C*), nor in my hands: I take this ball, which is under the cup A (*feigning to take it out, and raifing the bottom of the cup fo that the fpectators may not attend to his fingers*). I cover this cup C with the two others A and B, and I throw it (IX.) through thefe two cups (*raifing them, and fhewing that the ball is paffed there*).

8. *With this fingle ball and a fhilling; to pafs a ball from one hand into the other*—“I take this ball; I put it (II.) into this hand, and I put into the other the fhilling. In which hand do you think the ball is? or in which do you think the fhilling may be?” (*Whatever answer the fpectator makes, the performer fhews him that he is miftaken, and that the whole is in the right hand; and this truth ferves as a pretence to take a ball from the bag in putting the fhilling back into it*.)

The performer may, however, without breaking the connection of thefe operations, difpenfe with this trick, and feign to drop the ball he plays with, which affords him a pretence for taking another.

9. *With the ball remaining on the table, and that which is fecretly taken out of the bag; to pafs under a cup the two balls put under the others.*—The operator goes on with his difcourfe: “In order to give you ftill farther amufement, I take this ball and cut it in two (*taking it in his left hand, and holding the rod with his right; feigning to cut it, he puts afterwards the rod on the table, and brings back to his fingers ends the ball which he took out of the bag*). Nothing is fo commodious as to be able in this manner to multiply the balls. When I am in want of money, I cut them again and again, until I may have had five or fix bufhels (*placing the two balls on the table*). Obferve that there is nothing under this cup A. I put there (II.) this firft ball: there is nothing more under the two other cups (*introducing the ball under the cup B*). I take this fecond ball, and I put it (II.) under the cup C: there is now a ball under thefe two cups A and C. I take away (VIII.) from this cup C this ball, and I throw it (IX.) thro’ the middle cup B: obferve that it is paffed (*raifing the cup B, and introducing there the fecond ball*). I command this, which is under the other cup A, to pafs under

the fame cup B (*raifing this cup, and fhewing that they are both there, and placing them upon the table*).

10. *With the two balls which are upon the table. Two balls having been put under the fame cup, to pafs them under two others.*—“When I was at college, the tutor told me, it was neceffary to know how to do my exercife in two ways. I have juft now paffed thefe two balls into the middle cup; I am now to make them go out; the one is not more difficult for me than the other. I take therefore thefe two balls, and place them under this cup B (*putting one ball under the cup, and conjuring the other*); obferve that there is nothing under the cup A, nor under the other C (*introducing into this left the ball that he conjured*): I command one of thefe balls, which are under the middle cup, to pafs under the one or the other of thefe two cups A and C. Behold it already gone (*raifing the cup B to fhew that there is no more than a fingle ball; and taking, with the right hand, the ball which is underneath, he fhews it, and puts it (II.) under the fame cup B*). Let us fee into which cup it has paffed (*raifing immediately the cup A, and introducing the ball that he took from the cup B*): here it is under this cup C (*raifing the cup*); I command the other ball to pafs under this cup A (*he raifes it, and fhews that it paffed there*).” This trick is frequently done with three balls, but it appears much more extraordinary with two.

11. *With thefe two balls, a third which he fhews, and a fourth fecreted in his hands; to pafs three balls under the fame cup.*—“All this is but a trifle; I am going to fhew you another trick with three balls (*taking out of the bag a third ball, and placing it on the table, fecreted at the fame time a fourth in his hand*). Obferve that there is nothing under any of thefe cups (*raifing them, and introducing them under the cup C*). I take this firft ball, and throw it (IX.) through this cup C. Obferve that it is paffed (*raifing (X) the cup with the right hand*); I take this fecond ball, and throw it (XI.) through the fame cup. There it is paffed (*raifing (X.) again the cup*); I take the third, and I make it pafs the fame (*raifing (X.) the cup, and fhewing that thefe are paffed under all the three*).

12. *With the three balls remaining under the cup, and that held fecretly in the hand; to pafs two balls from one cup into another, at the choice of a perfon, without touching any of the cups.*—“Here is another in which I have never been able to comprehend any thing; but it will amonifh you much (*raifing the cup C, and taking away the three balls from their places, he puts them under each cup, and in raifing the cup C introduces there the fourth ball which he held fecretly in his hand*). I take this ball (*that which is under the cup B*), and I put it (II.) under the fame cup. I take this (*the ball from the cup A*), and I place it (I.) under the fame cup (*putting there alfo to it which was fecreted in his hand*): I take this ball, and I throw it (IX.) through the cup C; and to fhew that I do not deceive you, behold it paffed (*raifing (X.) the cup that has been fixed upon, which fuppofe to be C, and fhewing that there are two*). I take again thefe two balls, and put them under the cup C (*putting really but one*): obferve that there is no more under this cup B (*introducing there the ball that he had juft taken away, and fhewing that he had no other in his hand*); I command one of thefe balls, which are under this cup C,

to go and join that which is under this A. Observe that it is passed. There' (raising the cup C, and returning the two balls under the same cup, and raising C, in order to show that there is but a single one; and he places it again under the same cup; he does not raise the cup B under which a ball remains).

13. With the three balls that were placed upon cups, and that which remains hidden under the middle cup; to pass under the same cup the balls put under the others.—“I take this ball (that which is upon the cup C), and I put it (II.) under the same cup C; and I order it to pass into this cup B: there it is passed (in raising this cup he introduces a third ball). I take this third ball, and put it (II.) under this cup C; and I command it to pass into the cup B along the table, and in the sight of the spectators (taking the rod in his left hand, feigning to show the way that it passed between the two cups). You did not see it then? Here it is (He draws it (VIII.) from the end of the rod, which appears to show it). Go quickly (throwing it (IX.) through the cup B; and showing that they are all three there, and that there is nothing under the two others; placing afterwards three of the balls on the table, and secreting the fourth in his hand).

14. With the three balls remaining upon the table, and that which is held secretly in his hand.—Multiplication of the balls.

For this trick there must be a tin vase (see fig. 8.), at the bottom of which there must be contrived a false bottom A, which will fall down at pleasure; that is to say, in reversing it upon the table, by means of a small trigger placed at the base of one of the handles B, introducing previously between the false and true bottoms a dozen of balls. The operator goes on with his discourse.

“If any of the company believe in witches, I would give my advice that they should believe in them no longer; as what I am about to do is much more surprising than the feats of any witch—I put (I.) these three balls under the three cups you see on the table: I take away (VII.) this first ball (that which is under the cup C), and I put it (II.) into this vase. I take this, and I also put it (II.) into the vase. I take away (VII.) this third (that which is under the cup A), and I throw it (II.) the same way”. (Every time that he raises one of the cups to take away the ball, he introduces that which always remains secreted in his right hand; and this he repeats, constantly taking out one ball and putting in another, till he has introduced all the twelve balls; after which he resumes his discourse.) “You imagine, perhaps, that I always make use of the same balls; but, to prove the contrary, here they are, (inverting the vase so as to turn them all out).

In this trick, if the vase be well made, the inside may be shown, and it may even be previously inverted: in which case, it will not be supposed that any balls have been put into it.

15. With the three balls remaining under each of the cups, and that which is hidden in his hand; to pass one ball under each of the three cups.

“I put all these balls into my pocket. I take (VI.) this (the one secreted in his hand), and I make it pass through the table under this first cup C, (conjuring it). I take another from my bag (showing the same ball). I make it pass in the same manner through

this B, (conjures it again). I take a third (showing still the same), and I make it pass under this last cup A (conjuring it). Here are all the three passed (turning over the cups, and in taking them up again introduces the ball that he has in his hand under the cup B, and puts the three balls upon the three cups.

16. With the three balls put upon each cup, and that which was introduced under the middle cup; to draw two balls through the same cup.—“There will be wanted now only two balls.” Here the operator takes that which is under the cup C, and puts it (II.) into his bag. He takes in the fingers of his right hand the ball which is on the cup B, showing it; and with the other covers the cup B, with that passing (IV.) there the ball which he feigned to put into his bag. He then takes the ball which is under the cup A, with the right hand; and showing a ball in each hand, tells the company that he put them (II.) under the cup A; though he actually puts but one, which he holds in his left. He then draws one of these balls through the same cup A, showing it, and placing it upon the cup C. He then raises the cup A, and takes the ball which is under it with his right hand, adding, “There remains but one more.” While pronouncing these words, he puts it (II.) under the cup. “I take (adds he) the other ball,” (raising the cup, and showing that it is there no longer); then, taking one of the two balls which seemed to remain alone, he put it (II.) into his bag, saying, “I return this into my bag.”

17. With a ball which is hidden under the middle cup, another hidden under that which covers it, that which remains in the hand, and a fourth which is upon the table; to pass the same ball successively through the three cups.—The preceding trick was only on-purpose to prepare the spectators for this; as they now imagine that the performer played only with one ball. He may now address them in the following manner:

“I am now going to make a very pretty trick with this single ball. I forgot to show it to you at the beginning: I cover (XI.) these cups (putting the cup A upon C and B). I take (VI.) this ball, and I throw it (IX.) through the first cup;” (raising (X.) the cup A with the right hand). He then shows that it is passed between C and A; and, putting it in its place, he introduces there that which he has in his hand. “I take (says he) (VI.) this same ball, and I throw it through the other cup C;” and while he says so, he raises (X.) the cup C, showing that it has passed, introducing there that which he has in his hand, and putting it in the place of the former. “I take again (continues he) (VI.) this same ball, and I throw it (IX.) through that last cup B;” (raising (IX.) the cup B.) During which time he takes away the ball from under it with his left hand, then places it on the table, and returns the cup to its place, introducing there the ball which he has in his left hand.

18. With the three balls which are under the cups, that which is on the table, and two which he takes from the bag; to pass under a cup the balls put under the two others without raising these last.—The performer may proceed in his discourse in the following manner:

“Let us now return to the order of the entertainment which I have interrupted, and continue to play with three balls.” He now takes two balls from his bag,

bag, by which means he in fact plays with six balls, though he pretends to play only with three. These two balls, together with that which remains on the table, he puts on the top of each cup. "I take (says he) (VI.) this ball, (*that which is on the cup C*). I throw it (IX.) through that cup: there it is passed." He now raises (X.) the cup, shows it; and thus has an opportunity of introducing the ball which he has in his hand. "I take (VI.) this (*the ball which is under the cup B*), and throw it (IX.) through the cup B." At this he raises the cup with his left hand, showing that it has passed, and covering it again. "I take again (VIII.) this ball from the same cup, and throw it (IX.) through that C: observe that it is passed." Then, raising up (X.) the cup C, showing that there are then two there, he introduces other two which he had in his hand. "I take (says he) (IV.) this ball (*that which is under the cup A*), and I throw it (IX.) through the same cup A. There! it is passed," (*raising the cup C*); after which he shows the three balls, and introduces there that which was in his hand, putting the three balls upon the table.

19. *With the three balls which remain under the cups, and the three others which remain upon the table; to pass separately the three balls through each cup.*—In this manœuvre the performer puts again the three balls which are upon the table upon the top of each cup. He takes that which is on the cup C, and throws it (IX.) through the same cup; and while he announces this to the company, he raises (X.) the cup: taking away (VIII.) the ball, showing that it has passed, introducing there that which was in his hand, and putting the same ball upon the same cup. He then takes that which is upon the cup B, and throws it (IX.) through the same cup; shows that it is passed, takes it away (VII.), and introduces the ball that was in his hand under this cup, putting it in like manner on the cup. Then he takes the ball which is on the cup A, and throws it (IX.) through the same cup A. As he announces its passage he raises the cup, taking away (VII.) and showing the ball; introducing in the same manner that which was in his hand; putting this first at the top of the cup A, and then shows that it is not in his hand, and that he has but three balls.

20. *With the three balls remaining upon the table, and those which are under each cup. Having put the balls into the bag, to make them return under the cups.*—"I take these three balls, and I return them into my bag. (*keeping one in his hand*). Behold to what all is reduced that I had to show you for your amusement. I did know some more very pretty tricks, but I have forgot them. (*Pretending to muse for a moment*): Ah! I still remember two or three very pleasing ones. Come, my little balls! Return under the cups. (*turning over the cups*). See how nimble they are, and obedient at the same time;" (*covering them again with the cups*.)

21. *With the three balls which are under the cups, and that in his hand; to pass the balls through the two cups.*—Here the operator begins with taking away (VII.) the ball which is under the cup C; he covers it with the cup B; and passes (III.) the other ball which he has in his right hand between the two cups. He then takes (VI.) the ball which he had in his left hand,

and throws it (IX.) between the two cups B and C. In announcing its passage he raises the cup (X.), shows that it is passed, and introduces the ball in his hand. He then takes the ball under the cup B, and throws it (IX.) through the two cups C and B. Announcing to the company its passage, he raises (X.) the cup, and shows that there are two balls, introducing (III.) at the same time the third. He then takes the last ball, viz. that which is under the cup A, covers again with the left hand the two cups B and C, and throws (IX.) the third ball through these two cups. He then announces their passage, raises the two cups, and shows the three balls, covering again the cup C with the two others.

22. *With the three balls which are upon the cup C, and the one in his hand; to take out the three through two cups*—"I take (says the performer) (VIII.) the first ball, and put it (II.) into my bag. I take (VIII.) in the same manner the second, and I put it also into my bag. I take (VIII.) the third, and I put it into my bag. (*putting in really that which he had in his hand*.) While he desires the spectators to observe that there are no more in the cups, he raises the cup A with the left hand, and, putting it in its place, raises with the right hand the cup C. In supporting it with the cup B, he puts it down quickly, and a little on the side of B, and at the same time places C on the table, under which will be found the three balls, which had not time to separate.

23. *With the three balls remaining under the middle cup, and three others taken out of the bag; to pass, in one action, three balls through a cup.*—This trick is begun by the performer taking three balls from his bag, and putting them on the top of the cup B, which he covers with the cup A. Ordering them to disappear and to pass under the cup C, he takes away very suddenly with the left hand the cup B, as is done in the preceding trick, leaving in the middle of the play the cup C, under which the balls are found. Taking them then away, and replacing them on the same cup, he makes them return again in the same manner under the cup C. At last he takes the three balls, and putting them in his bag, pretends to pass them through the table under the cup where the others were. He then returns two or three of these last balls into his bag, and takes two white balls, which he puts upon the table.

24. *With the black ball remaining on the table, two other white balls, and a black one which he holds secretly in his hand; to pass three balls from one cup into another.*

N. B. To make the balls white, they are rubbed with a little chalk instead of being blackened with the candle.

"Let us now (says the operator) have a trick to prove that I do not conjure the balls. There is nothing under this cup C, (*introducing the black ball that was in his hand*). There is no great thing under this B. I place there these three balls, (*the three which are upon the table, of which he conjures the white one*). There is nothing more under this third cup A, (*introducing there the white ball*). I order one of these two white balls which are under the cup B, to pass under this A." With these words he raises the cup B; and taking the white ball in the fingers of his left hand, and the black one in those of the right, he shows them,

saying, "Observe that there is but one white one. I put again these two balls under the cup B." While speaking thus he puts the white one under the cup, and conjures the other, while feigning to put it in with that of the left hand. He then announces its passage; and while he does so, raises the cup A, and introduces the black ball. Commanding then the black ball to pass under the cup A, he raises the cup B, takes in his right hand fingers the ball which is there, and shows it. "I put it again (says he) (II.) under this cup (conjuring it); and I show you that it is passed under this A, (introducing there the white ball.) I order at last the white ball, which is under this cup B, to pass into this A." While telling the company that it is passed, he raises the cup A, and puts the three balls upon each cup, the black one upon the middle.

25. *With the three balls put at the top of the cups, and that which has been insisted under one of them in the preceding trick; to change the colour of the balls.* The operator goes on with his discourse: "If there is any one here who knows how to play the cups and balls, he will do well to observe, that it is not possible to do this trick by the common method, and with three balls only. However, I have no more, (showing his hands). I take this white ball (that which is upon the cup C), and I throw it (IX.) through this cup the same under which he left a black ball in the preceding trick). I take this black ball (with the left-hand fingers); there is nothing under this cup B, (introducing there the white ball). I throw it (IX.) through this cup B, (taking again the ball in his right-hand fingers). I take this other white ball, (with his left-hand fingers). There is nothing under this cup A, (introducing the black ball): I throw it (IX.) through the cup A, (taking it again into his right-hand fingers to conjure it). Observe that they have all changed their colour," (covering each of them with their cups).

26. *With the three balls which are left under the cups, two white balls, and a black one that he took trick by trick from his bag; to change the sizes of the balls.*—In performing this trick the operator takes away the white ball which is under the cup C with his left-hand fingers, and, raising the cup with his right, introduces there a white ball which he took out of his bag. The white ball which he introduces is kept in his hand with the fourth and little finger; and he raises the cup in the same manner as when he introduces the balls. In turning over the cup afterwards, he advances his hand to introduce this ball. These balls should be filled with horse-hair or paper, so that they may be very light, and make no noise. The operator then tells his company, that he makes the ball pass through the table under the same cup; and while he speaks thus, he takes the ball again in his right hand, and while putting his hand under the table, he takes a black ball out of the bag. He then takes away the ball from the cup B, introducing the black one in its stead. He then tells the spectators, that he makes it repass through the table; and, while he tells them so, he takes a white ball; then, while taking away that which is under the cup A, he introduces that ball, making it repass in the same manner through the table, and at last shows them to the company, and covers them with their cups.

27. *With the three balls which are under the cups, two other black balls, and a white one that was taken trick by trick from his bag; to pass the balls from one cup into another.*—"Observe well (says the operator), that there are two white balls under these two cups A and C, and a black one under this (raising the cups). I cover again these three balls (covering each of them with a cup). I make to pass out through the table the white ball which is under the cup C." Here he takes a white ball from his bag; and in order not to fail, the black and white balls should be in separate pockets. Having taken out the ball, he puts the dirt into his bag, telling the company that there is now nothing under the cup C; and while he says so, he raises it, holding the ball with his little finger, proceeding in his discourse as follows. "I take away this ball (that which is under the cup A), and I pass it through the table under the cup C (taking a black ball from his bag.)" While the passage of this ball is announced, he raises the cup C to take it away and show it; and introducing there this black ball, "I put again (says he) this other white ball into my bag, and I command the black one which is under the cup B to pass under this. It is no longer under this cup:" and while he says so, he raises the cup B, in supporting with his little finger the ball which remains there. Announcing its passage, he raises the cup C and shows the ball; taking it afterwards into the left-hand, throws it into the air, returning it into his right hand, and feigning to throw it into the air a second time, he lets it fall into his bag; calling his eyes upwards and downwards as if he saw it fall upon the cup B; he raises this cup, and shows it to the spectators, as the former, passed through the cup.

## SECT. II. Performances with the Cards.

PREVIOUS to the performances with cards, it will be necessary to explain the method of making the pass; that is, bringing a certain number of cards from the bottom of the pack to the top; as many of these performances depend on that manœuvre.

1. Hold the pack of cards in your right hand, so that the palm of your hand may be under the cards: place the thumb of that hand on one side of the pack, the first, second, and third fingers on the other side, and your little finger between those cards that are to be brought to the top and the rest of the pack. Then place your left hand over the cards, in such a manner that the thumb may be at C (fig. 20, 21.), the fore-finger at A, and the other fingers at B.

The hands and the two parts of the cards being thus disposed, you draw off the lower cards confined by the little finger and the other parts of the right hand, and place them, with an imperceptible motion, on the top of the pack.

It is quite necessary, before you attempt any of the experiments that depend on making the pass, that you can perform it so dexterously that the eye cannot distinguish the motion of your hand; otherwise, instead of deceiving others, you will expose yourself. It is also proper that the cards make no noise, as that will occasion suspicion. This dexterity is not to be attained without some practice,

There is a method of preparing a pack of cards, by inserting

intending one or more that are a small matter longer or wider than the rest; which preparation will be necessary in several of the following experiments.

2. Have a pack in which there is a long card; open the pack at that part where the long card is, and present the pack to a person in such a manner that he will naturally draw that card. He is then to put it into any part of the pack, and shuffle the cards. You take the pack, and offer the same card in like manner to a second or third person; observing, however, that they do not stand near enough to see the card each other draws. You then draw several cards yourself, among which is the long card, and ask each of the parties if his card be among those cards, and he will naturally say Yes, as they have all drawn the same card. You then shuffle all the cards together, and cutting them at the long card, you hold it before the first person, so that the others may not see it, and tell him that is his card. You then put it again in the pack, and shuffling them a second time, you cut again at the same card, and hold it in like manner to the second person, and so of the rest (A).

If the first person should not draw the long card, each of the parties must draw different cards; when, cutting the pack at the long card, you put those they have drawn over it, and seeming to shuffle the cards indiscriminately, you cut them again at the long card, and show one of them his card. You then shuffle and cut again, in the same manner, and show another person his card, and so on: remembering, that the card drawn by the last person is the first next the long card; and so of the others.

This experiment may be performed without the long card, in the following manner. Let a person draw any card whatever, and replace it in the pack: you then make the pass, and bring that card to the top of the pack, and shuffle them without losing sight of that card. You then offer that card to a second person, that he may draw it, and put it in the middle of the pack. You make the pass and shuffle the cards a second time in the same manner, and offer the card to a third person, and so again to a fourth or fifth, as is more fully explained further on.

3. You let a person draw any four cards from the pack, and tell him to think on one of them. When he returns you the four cards, you dexterously place two of them under the pack and two on the top. Under those at the bottom you place four cards of any sort; and then, taking eight or ten from the bottom cards, you spread them on the table, and ask the person if the card he fixed on be among them. If he say No, you are sure it is one of the two cards on the top. You then pass those two cards to the bottom, and drawing off the lowest of them, you ask him if that is not his card. If he again say No, you take that card up, and bid him draw his card from the bottom of the pack.

If the person say his card is among those you first drew from the bottom, you must dexterously take up the four cards that you put under them, and, placing

those on the top, let the other two be the bottom-cards of the pack, which you are to draw in the manner before described.

4. After a card has been drawn, you place it under the long card, and by shuffling them dexterously you bring it to top of the pack. Then lay, or throw, the pack on the ground, observing where the top card lies. A handkerchief is then bound over your eyes, in such a manner however that you can see the ground, which may be easily done. A sword is then put into your hand, with which you touch several of the cards, seemingly in great doubt, but never losing sight of the top-card, in which at last you fix the point of the sword, and present it to him who drew it. Two or three cards may be discovered in the same manner, that is, by placing them under the long card, and then bringing them to the top of the pack.

5. You must have in the pack two cards of the same sort, suppose the king of spades. One of these is to be placed next the bottom-card, which may be the seven of hearts, or any other card. The other is to be placed at top. You then shuffle the cards, without displacing those three cards, and show a person that the bottom-card is the seven of hearts. Then drawing that card privately aside with your finger, which you have wetted for that purpose, you take the king of spades from the bottom, which the person supposes to be the seven of hearts, and lay it on the table, telling him to cover it with his hand. You then shuffle the cards again, without displacing the first and last card, and passing the other king of spades at the top to the bottom, you show it to another person. You then draw that privately away; and taking the bottom-card, which will then be the seven of hearts, you lay that on the table, and tell the second person, who believes it to be the king of spades, to cover it with his hand.

You then command the seven of hearts, which is supposed to be under the hand of the first person, to change into the king of spades; and the king of spades, which is supposed to be under the hand of the second person, to change into the seven of hearts; and when the two parties take their hands off, and turn up the cards, they will see, to their no small astonishment, after having so carefully observed the bottom-cards, that your commands are punctually obeyed.

6. TAKE a card, the same as your long card, and rolling it up very close, put it in an egg, by making a hole as small as possible, and which you are to fill up carefully with white wax. You then offer the long card to be drawn; and when it is replaced in the pack you shuffle the cards several times, giving the egg to the person who drew the card, and, while he is breaking it, you privately withdraw the long card, that it may appear, upon examining the cards, to have gone from the pack into the egg. This experiment may be rendered more surprising by having several eggs, in each of which is placed a card of the same sort, and then giving the person the liberty to choose which egg he thinks fit.

(A) There is frequently exhibited another experiment, similar to this, which is by making a person draw the long card; then giving him the pack, you tell him to place his card where he pleases and shuffle them, and you will then name his card or cut the pack where it is. You may also tell him to put the pack in his pocket, and you will draw the card; which you may easily do by the touch.

This deception may be still further diversified, by having, as most public performers have, a confederate, who is previously to know the egg in which the card is placed; for you may then break the other eggs, and show that the only one that contains a card is that in which you directed it to be.

To name several cards that two persons have drawn

7. **DIVIDE** a piquet pack of cards into two parts by a long card. Let the first part contain a quint to a king in clubs and spades, the four-eighths, the ten of diamonds, and ten of hearts; and let the other part contain the two quart majors in hearts and diamonds, the four sevens, and the four nines (B).

Then shuffle the cards, but observe not to displace any of those cards of the last part which are under the long card. You then cut at that card, and leave the pack in two parts. Next, present the first of those parts to a person, and tell him to draw two or three cards, and place the remainder on the table. You present the second parcel in like manner to another. Then having dexterously placed the cards drawn by the first person in the second parcel, and those drawn by the second person in the first parcel, you shuffle the cards, observing to displace none but the upper cards. Then spreading the cards on the table, you name those that each person drew; which you will very easily do, by observing the cards that are changed in each parcel.

The two convertible aces.

8. **ON** the ace of spades fix, with soap, a heart, and on the ace of hearts, a spade, in such a manner that they will easily slip off.

Show these two aces to the company; then taking the ace of spades, you desire a person to put his foot upon it, and as you place it on the ground, draw away the spade. In like manner you place the seeming ace of hearts under the foot of another person. You then command the two cards to change their places; and that they obey your command, the two persons, on taking up their cards, will have ocular demonstration. A deception similar to this is sometimes practised with one card, suppose the ace of spades, over which a heart is placed slightly. After showing a person the card, you let him hold one end of it, and you hold the other, and while you amuse him with discourse, you slide off the heart. Then laying the card on the table, you bid him cover it with his hand. You then knock under the table and command the heart to turn into the ace of spades. By deceptions like these, people of little experience and much conceit are frequently deprived of their money, and rendered ridiculous.

The fifteen thousand livres.

9. You must be prepared with two cards, like those represented by fig. 22. and with a common ace and a five of diamonds.

The five of diamonds and the two prepared cards are to be disposed as in fig. 23. and holding them in your hand, you say, "A certain Frenchman left 15,000 livres, which are represented by these three cards, to his three sons. The two youngest agreed to leave their 5000, each of them, in the hands of the elder, that he might improve it." While you are telling this story, you lay the 5 on the table, and put the ace in its place, and at the same time artfully

change the position of the other two cards, that the three cards may appear as in fig. 24. You then resume your discourse, "The eldest brother, instead of improving the money, lost it all by gaming, except 3000 livres, as you here see." You then lay the ace on the table, and, taking up the 5, continue your story: "The eldest, sorry for having lost the money, went to the East Indies with these 3000, and brought back 15,000." You then show the cards in the same position as at first, in fig. 22.

To render this deception agreeable, it must be performed with dexterity, and should not be repeated, but the cards immediately put in the pocket; and you should have five common cards in your pocket, ready to show, if any one should desire to see them.

10. **TAKE** a parcel of cards, suppose 40, among which insert two long cards: let the first be, for example, the 15th and the other the 26th, from the top. Seem to shuffle the cards, and then cutting them at the first long card, poise those you have cut off in your hand, and say, "there should be here 15 cards." Cut them again at the second long card, and say, "There are here only 11 cards." Then poising the remainder, you say, "here are 14 cards."

11. *Several different cards being shown to different persons, that each of them may fix on one of those cards; to name that on which each person has fixed.*—There must be as many different cards shown to each person as there are persons to choose: therefore, suppose there are three persons, then to each of them you must show three cards; and telling the first person to retain one in his memory, you lay those three cards down, and show three others to the second person, and so to the third. You then take up the first person's cards, and lay them down one by one, separately, with their faces upward. You next place the second person's card over the first, and in like manner the third person's card over the second's; so that in each parcel there will be one card belonging to each person. You then ask each of them in which parcel his card is; and when you know that, you immediately know which card it is; for the first person's card will always be the first, the second person's the second, and the third person's the third, in that parcel where they each say his card is.

This experiment may be performed with a single person, by letting him fix on three, four, or more cards. In this case you must show him as many parcels as he is to choose cards, and every parcel must consist of that number, out of which he must fix on one; and you then proceed as before, he telling you the parcel that contains each of his cards.

12. **MAKE** a ring large enough to go on the second or third finger (fig. 15.), in which let there be set a ring-large transparent stone, to the bottom of which must be fixed a small piece of black silk, that may be either drawn aside or expanded by turning the stone round. Under the silk is to be the figure of a small card.

Then make a person draw the same sort of card as that at the bottom of the ring, and tell him to burn it in the caudle. Having first shown him the ring, you take

(B) The cards may be divided in any other manner that is easy to be remembered.

take part of the burnt card, and reducing it to powder, you rub the stone with it, and at the same time turn it artfully about, so that the small card at bottom may come in view.

the magic  
a-caddy.

Plate  
CLXVII.

3. *To change one card into another.*—Provide a mahogany tea caddy about four or five inches deep, and long enough to admit a common sized playing card: (see fig. 9.) This caddy must be furnished with a moving false bottom B, moveable upon hinges on the inside edge of the front A. This bottom may be made of brass, tin, or lead; and the false bottom must be so exactly fitted, that it cannot, from a slight view, be distinguished from the other. The inside of both caddy and false bottom ought to be lined with black or other dark-coloured cloth or velvet, so that it may not make any noise in falling down. It would be proper that the false bottom should rise with a spring towards the front and it must be kept tight with a brass spring-catch (*a*, fig. 10.) screwed to the left side of the box near the top, and which is hid by the cloth covering. The end of this spring projects a little into the front. It is driven back, to let go the false bottom, by means of a small bent wire *bb* let into the front of the caddy; and this pin is moved by the bolt *c*, which, when the box is locked, shoots out against it, by reason of the spring being driven in; by which means the bottom springs down, and covers the card placed in the box.

Before you attempt to show any trick with this caddy, a card must be placed in the inside between the front A and the false bottom B, springing up the bottom afterwards against the front; after which it is ready for use, and shown openly to the company without any danger of a discovery.

Two persons may now be desired to draw two different cards from a pack, one of which must be the same with the one concealed in the caddy. Taking this card from the person who drew it, you put it in the pack, pretend to shuffle it, but keep the card either uppermost or undermost, so that you can easily find it afterwards. Desiring then the other person to come forward and put his card very attentively into the caddy, you in the mean time secretly convey away from the pack the card drawn by the other; then, giving him the key, you desire the caddy to be locked up. After some pretended conjurations, desire him to unlock it again and take out the card; which he will find not to be his, but that drawn by his neighbour: his card being apparently vanished from the caddy, as the other is from the pack.

The two  
magic port-  
folios.

14. PROVIDE TWO pieces of pasteboard A and B (fig. 11.) of equal dimensions,  $3\frac{1}{2}$  inches long and three broad. Place these beside one another, as shown in the figure. Take then a very smooth silk ribbon, and put a band of it from C to E towards the edge of the pasteboard A, and another from D to F in such a manner as to come beyond the pasteboard, and to admit of being folded over at the two ends. This must be glued on the back of the board A at the places C and D, and at the back of the board B at the places E and F. Place two other bands in a similar manner on the pasteboard B, turning them over on the back of the same board at the places I and L, and at the back of A at the places G and H. These two bands should fall in the inside of the pasteboard, according to the breadth

of the ribbons. The two pasteboards being now placed the one upon the other, will form a kind of port-folio, one of the sides of which will always be hinged when the other is opened. Four small bands of the same ribbon are to be put at the four extremities of the sides MNQR of the two pieces of pasteboard; observing that they pass below the bands already placed. Glue their ends in the same manner as their ends at the back of the boards, ornamenting also the two sides O and P of the pasteboard B with pieces of the same ribbon; but these six last bands are of no use in the performance.

Two pieces of paper folded like the cover of a letter must now be provided, large enough to cover the two ribbons GI and HL, as well as the space contained within them. Glue one of these up in the two ribbons, and apply the other below this; so that the uppermost of these two wrappers may fall exactly over the other, inclosing and hiding the two ribbons entirely. A second port-folio similarly constructed is now to be provided, and both of them covered with coloured paper from the sides where the ribbons are glued and folded.—The deceptions with these port-folios are as follows.

1. *Two cards, chosen at random, having been shut up in two separate places; to make them pass reciprocally from the one into the other.*—The port-folios being constructed in the manner above described; if you open one of them either on the one side or on the other, one of the paper wrappers will always be visible; and thus it will naturally be supposed that there is no more but one. Having then secretly inclosed a card in each of the wrappers of the port-folios, procure a pack of cards that has but two sorts, and cause two persons fairly draw two cards similar to the first. Present then a port-folio, open, to the first person who drew a card similar to that which was placed in the second, desiring him to place it in the wrapper which he finds vacant. Take back then the port-folio; and, in placing it on the table, artfully turn it over: having placed likewise in the vacant wrapper of the second port-folio the card drawn by the second person; and putting it in the same way upon the table, command the cards reciprocally to pass from the one port-folio into the other; and open them so that each of the persons may take out the card which the other inclosed.

2. *A card being shut up in the port-folio; to make it return into the pack.*—To perform this, procure a pack which has two cards of the same kind. One of these is to be openly drawn, and the person who has done so must be told to shut it up under the wrapper of one of the port-folios; and inform him that you will make it return into the pack. Give him the port-folio to blow upon; and on opening it, present him with the empty wrapper, to show him that his card is not there; after which, presenting him with the pack, he will find there the other card, which he will naturally imagine to be the one he put into the wrapper.

3. *To make an answer appear to a question secretly written.* Transcribe on different cards a certain number of questions, and on others the same questions with their answers; taking care to have the hand-writing as much alike as possible, so that no difference can easily be perceived. The same caution must be observed with regard to the cards themselves; which, for that reason,

ought to be plain ones. Having written with a pencil at the bottom of the first questions their corresponding answers, shut up one of them secretly in the port-folio; and presenting them to any person, let him draw as by chance that which is similar to the one thus shut up. Make him then place in the other wrapper the question which he had drawn; and telling him that you are about to write an answer even through the port-folio, take a glass, and pretend to read in it the answer to the question. Open it afterwards, so that he may take out the other card himself, and he will imagine it to be the one he selected.

In performing this trick, it will be proper to have a port-folio of the same kind with the two described, which opens only at one side, and which consequently has but one wrapper. This must be shown to such as seem to be too inquisitive, and will be of use to prevent them from entertaining any idea that the folio opens upon both sides. The former must therefore be immediately put into the pocket, in order to give an opportunity of drawing out the other in case the port-folio should be asked for.

The card in the mirror. Plate CCLXVI.

15. PROVIDE a mirror, either round, as A (fig. 18.), or oval, the frame of which must be at least as wide as a card. The glass in the middle must be made to move in the two grooves CD and EI, and so much of the quicksilver must be scraped off as is equal to the size of a common card. You will observe that the glass must likewise be wider than the distance between the frame by at least the width of a card.

Then pass over the part where the quicksilver is rubbed off a piece of pasteboard, on which is a card that must exactly fit the space, which must at first be placed behind the frame.

This mirror must be placed against a partition, through which is to go two strings, by which an assistant in the adjoining room can easily move the glass in the grooves, and consequently make the card appear or disappear at pleasure (c).

Matters being thus prepared, you contrive to make a person draw the same sort of card with that fixed to the mirror, and place it in the middle of the pack; you then make the pass, and bring it to the bottom; you then direct the person to look for his card in the mirror, when the confederate behind the partition is to draw it slowly forward, and it will appear as if placed between the glass and the quicksilver. While the glass is drawing forward, you slide off the card from the bottom of the pack, and convey it away.

The card fixed to the mirror may easily be changed each time the experiment is performed. This experiment may also be made with a print that has a glass before it and a frame of sufficient width, by making a slit in the frame through which the card is to pass; but the effect will not be so striking as in the mirror.

The marrow-vase.

16. PLACE a vase of wood or pasteboard A B (fig. 19.) on a bracket L, fixed to the partition M. Let the inside of this vase be divided into five parts, *e, d, e, f, g*;

and let the divisions *e* and *d* be wide enough to admit a pack of cards, and those of *e, f, g*, one card only.

Fix a thread of silk at the point H, the other end of which passing down the division *d*, and over the pulley I, runs along the bracket L, and goes out behind the partition M.

Take three cards from a piquet pack, and place one of them in each of the divisions *e, f, g*, making the silk thread or line go under each of them. In the division *e*, put the pack of cards from which you have taken the three cards that are in the other divisions.

Then take another pack of cards, at the top of which are to be three cards of the same sort with those in the three small divisions; and, making the pass, bring them to the middle of the pack, and let them be drawn by three different persons. Then give them all the cards to shuffle; after which place the pack in the division *d*, and tell the parties they shall see the three cards they drew come, at their command, separately out of the vase.

An assistant behind the partition then drawing the line with a gentle and equal motion, the three cards will gradually rise out of the vase. Then take the cards out of the division *e*, and show that those three cards are gone from the pack.

The vase must be placed so high that the inside cannot be seen by the company. You may perform this experiment also without an assistant, by fixing a weight to the end of the silk line, which is to be placed on a support, and let down at pleasure by means of a spring in the partition.

17. LET a small perspective glass be made, that is The division wide enough, at the end where the object-glass is placed, to hold a table similar to the following. The dividing perspective glass.

1.131	10..132	19.133
2.231	11..232	20.233
3.331	12..332	21.333
4.121	13..122	22.123
5.221	14..222	23.223
6.321	15..322	24.323
7.111	16..112	25.113
8.211	17..212	26.213
9.311	18..312	27.313

Take a pack of cards that consists of 27 only, and giving them to a person, desire him to fix on any one, then shuffle them, and give the pack to you. Place the 27 cards in three heaps, by laying down one alternately on each heap; but before you lay each card down, show it to the person, without seeing it yourself; and when the three heaps are finished, ask him at what number, from 1 to 27, he will have his card appear,

(c) This experiment may be performed without an assistant, if a table be placed against the partition, and the string from the glass be made to pass through a leg of it, and communicate with a small trigger, which you may easily push down with your foot; and at the same time wiping the glass with your handkerchief, as if to make the card appear the more conspicuous. It may also be diversified, by having the figure of a head, suppose that of some absent friend, in the place of the card.

appear, and in which heap it then is? Then look at the heap through the glass, and if the first of the three numbers which stands against that number it is to appear at be 1, put that heap at top; if the number be 2, put it in the middle; and if it be 3, put it at bottom. Then divide the cards into three heaps, in the same manner, a second and third time, and his card will then be at the number he chose.

For example: Suppose he desire that his card shall be the 20th from the top, and the first time of making the heaps he say it is in the third heap: you then look at the table in the perspective, holding it at the same time over that heap, and you see that the first figure is 2; you therefore put that figure in the middle of the pack. The second and third times you in like manner put the heap in which he says it is, at the bottom, the number each time being 3. Then looking at the pack with your glass, as if to discover which the card was, you lay the cards down one by one, and the 20th card will be that he fixed on.

You may show the person his card in the same manner, without asking him at what number it shall appear, by fixing on any number yourself.

The foregoing experiments with the cards will be found sufficient to explain most others of a similar nature that have or may be made; the number of which is very great. To perform those we have described requires no great practice; the two principal points are, the making the pafs in a dexterous manner, and a certain address by which you influence a person to draw the card you present. Those that are performed by the long card are in general the most easy, but they are confined to a pack of cards that is ready prepared; whereas those which depend on making the pafs, may be performed with any pack that is offered.

### SECT. III. *Experiments with Sympathetic Inks.* [See *Sympathetic Inks.*]

#### EXPERIMENTS WITH CLASS I.

I. MAKE a book of 70 or 80 leaves; and in the cover at the end of it let there be a case, which opens next the binding that it be not perceived.

At the top of each right hand page write any question you please; and at the beginning of the book let there be a table of all those questions, with the number of the page where each is contained. Then write with common ink, on separate papers, each about half the size of the pages in the book, the same questions that are in the book, and under each of them write, with the ink made of the impregnation of saffron, or the dissolution of bismuth, the answer.

Soak a double paper in the vivifying liquor made of quick lime and orpiment, or the phlogiston of the liver of sulphur, and place it, just before you make the experiment, in the case that is in the cover of the book.

Then deliver some of the papers on which the questions are wrote to the company; and, after they have chosen such as they would have answered, they put them in those leaves where the same questions are contained, and, shutting the book for a few minutes, the

fulphureous spirit with which the paper in the cover of the book is imbibed, will penetrate the leaves, and make the answers visible, which will be of a brown colour, and more or less deep in proportion to the time the book has been closed (D).

2. MAKE a box about four inches long, and three wide, as ABCD, and quite shallow. Let it shut with hinges and fasten with a hook; and let it have two bottoms, the lower of wood, that draws out by a groove, and the uppermost of pasteboard. Between these two bottoms is to be placed a paper dipped in the vivifying liquor mentioned in the last experiment. Let there be also a board of the same size with the inside of the box, which being placed in it may press a paper against the pasteboard bottom.

Then take several pieces of paper, of the same size with the inside of the box, and draw on them the figures of men and women, in different attitudes and employments, as walking, riding, reading, writing, &c. These figures must be drawn with a new pen, or pencil, dipped in the impregnation of Saffron.

Being thus provided, and having privately placed the paper dipped in the vivifying liquor between the two bottoms, you tell a person you will show him what an absent friend of his is doing at the present hour. You then give him the paper adapted to the employment you intend, and tell him to write his friend's name at the bottom, that you may not change the paper. Then placing that paper next the pasteboard bottom, and putting the piece of wood over it, you shut the box. After amusing him with discourse for three or four minutes, you take out the paper, when he will see his friend in the employment you have assigned him.

3. LET a workman make a hand of wood, as in fig. 16. fixed at the end next the elbow to the piece E, the ends of which go through the screws CD and EF. The fore and middle fingers, and the thumb, are to be moveable at their joints. There must go a wire through the arm, that is fixed at one end to the fore-finger, and at the other to the piece E, round which it is to move: under the two joints of the two fingers are also placed two small springs, which are to raise it up.

To the fore-finger and thumb fix two small rings, through which a pen may be put, so as not to impede their motion. Under the arm at the point I, place a small brass roller, which serves to sustain the arm.

The pedestal on which this hand is placed must be at least a foot long, if the hand be of the natural size, and about eight inches wide. This pedestal must be hollow, and at the part ST there must be an opening about three inches long and two inches wide; the whole pedestal may be covered with a thin stuff, by which the hole will be concealed. There is to be a valve, or sort of trap-door, on the inside of the pedestal, which is to fasten against the opening.

Over the hand and pedestal place a glass frame, as in the figure: cover the hand with fine leather of flesh colour, and decorate the arm with a ruffe and cuff, which will entirely conceal the machinery.

Then take a number of cards, and write on them different questions; and on the same number of papers write,

(D) If a weight be placed upon the book, the effect will be the sooner produced. Or you may put the book in a box that will press it close down.

write, with the impregnation of lead, the answers. Give the cards to any one, and let him choofe a question; and you place the paper with the answer under the pen in the hand, letting him first see there is no writing on it (F). Now the pedestal being placed against a partition, the end F is to go through it. Therefore an assistant, upon a signal given, turns a handle fixed to F; and, as the piece E turns round, the wires that move the fingers and thumb are alternately lengthened and shortened, by which their joints are kept in continual motion; and the screw at the same time turning gently from F towards G, gives the whole arm a motion which very much resembles that of nature (F).

The hand and pen serve here merely to assist the illusion: but if a bit of sponge, dipped in the vivifying liquor, be placed at the end of the pen, as it goes over the writing on the paper, it will make it become gradually visible, and in this case the trap door and dipped paper may be omitted (G).

#### DECEPTION with CLASS II.

The writing  
can be against  
the wall.

4. TAKE several pieces of paper, of a size that you can put in any book that will go into your pocket, and write at the top of each of them a question, with common ink, and under it write the answer with the solution of gold or silver. Give any of these papers, closely wrapt up, to a person, and tell him to place it against the wall of his chamber, and keeping the door locked he will next day find the answer wrote on it.

As the gold ink will sometimes give a yellow cast to the paper, you may previously give a slight tincture of that kind to the papers you use for this purpose.

#### DECEPTION with CLASS III.

Mineral  
vegetation.

5. ON different papers draw the figures of several leaves or flowers with one of the colourless juices mentioned: then take one of the corresponding leaves or flowers, and laying it on an iron plate, over a chafing-dish of hot coals, let it burn to ashes. Put these ashes into a sieve, in which there is some very fine steel-filings, and sift them over the paper on which the flower is drawn, when they will adhere to the glutinous liquor, and form an exact representation of the figure of the leaf or flower.

#### DECEPTIONS with CLASS IV.

The talisman,  
fig. 7.

6. MAKE a little triangular box, each side of which is to be about five inches, and let its inside be divided into three parts. The first part A, which makes the bottom of the box, is to be covered by the second part B, in form of a case, and let the top C exactly cover the part B, as is expressed in the figure and the profiles.

N<sup>o</sup> 180.

Upon the bottom of the box let there be a plate of copper, about one-twentieth of an inch thick, on which let there be a number of hieroglyphic characters contiguous to each other, and cut in different sorts of metal.

On the top of the cover place a knob O, that goes through it, and to which the copper triangle Q is to be fixed occasionally, in such manner as it may go into the case B. There must be a space of one quarter of an inch between the triangle Q and the bottom of the case B; into which another plate of copper, of that thickness, may be placed.

The outside of this talisman may be decorated with uncommon figures or characters, to give it the appearance of greater mystery.

On several pieces of paper, of the same size with the inside of the talisman, write different questions in common ink, and write the answers in those different sorts of sympathetic ink that appear when heated, observing that each word of the answer is to be wrote in a different ink.

Having properly heated the triangle, and placed it under the cover, you introduce the talisman, and tell any one of the company to choofe one of the papers on which the questions are wrote, and place it in the talisman, and he will immediately have an answer wrote on that paper, the words of which will be of different colours, according to the different metals of which the talisman is composed. The paper being placed in the talisman, and the cover placed over it, the heat of the triangle will make the answer visible in a few moments. This experiment may be repeated if the triangle be made sufficiently hot; and two papers may be placed in the talisman at the same time.

This deception, when well executed, occasions a surprise that cannot be conceived by a mere description.

7. MAKE a wooden pedestal AB, about ten inches long, eight wide, and one deep: and at one end erect a box C, about ten inches high, eight broad, and two and a half deep. The silyla  
fig. 5.

The top of the pedestal must slide in a groove, on which inscribe a dial M, of six inches diameter, and which is to be divided into nineteen equal parts, in twelve of which write the names of the months, and mark the respective signs of the zodiac; and in the seven other divisions, which must be next the end B, write the days of the week, and mark the figures of the planets. Next the inner circle NO, make an opening into the box, of about one tenth of an inch. On the centre of the dial place an index that turns freely on its centre.

Within the pedestal place a pulley P, about four inches diameter, which is to turn on an axis that is directly

(E) The paper dipped in the vivifying liquor is to be previously placed against the opening in the table, and supported by the trap-door.

(F) This might be performed without an assistant, by means of a trigger placed in the leg of the table, and communicating with the handles, which the operator might thrust down with his foot. Where expence is not regarded, there may be a complete figure of a man in wood, or plaster of Paris, seated by the table.

(G) You may also have a glass ink-stand, with some of the vivifying liquor, into which the pen may be dipped, and it will then appear to write with common ink. The spectators should not be permitted to come very near this machine, which may be applied to several other purposes.

directly under the centre of the dial; and on the upper part of that axis fix a bent index R, which comes out at the opening made by the inner circle (H), and passes over those seven divisions only on which are wrote the days of the week.

Within the box C, let there be two rollers S and T, as in the figure: let that of S contain a spring; and at the end of T let there be a pulley V, of three quarters of an inch diameter, round which goes a string or thread that passes under the small pulley X, and is fastened to that of P: so that when the last pulley makes about one-third of a turn, that of V may make three or four turns.

There must also be a scroll of paper, about two feet long, and each end of which must be palled to one of the rollers. In the front of the box, between the two rollers, make an aperture D, about four inches long, and one inch and a half wide: to this opening let there be a little flap or slider, by which it may be closed at pleasure.

The apparatus being thus disposed, place the index R successively against each of the divisions marked with one of the planets; and as the paper is gradually wound up the roller, mark, against that part which is at the aperture D, the name of one of the following sibyls:

The Hellepontian	} sibyl.
Cumean	
Artemisian	
Phrygian	
Albunian	
Persian	
Libyan	

On each of the seven cards write a different question, and draw one of the seven planets. Next, take a memorandum book that contains seven leaves, and on each of them write the name of one of the foregoing sibyls; in each of the leaves place several pieces of paper, and on each of them write, with the sympathetic ink that does not appear till the paper is heated, different answers to the same question.

Then give a person the seven cards on which the questions are wrote, and tell him to choose one of them privately, and conceal the rest, so that it cannot possibly be known which of them he has chosen.

Next, tell him to place the index that points to the month against that in which he was born (1), and to place the index of the planets against that which is on the card he has chosen, and which is to preside over the answer: you tell him to do this privately, that no one may see him, and after that to cover the dial with his handkerchief. Then let him open the door that is before the aperture in the box, and tell you the name of the sibyl there visible.

You then open the memorandum-book, and taking out the papers that are in the leaf where the name of the sibyl just mentioned is wrote, you desire him to

VOL. IX. Part II.

choose any one of them he thinks proper. The talisman used in the last experiment being properly heated, is then to be introduced, when you direct the person to put the blank paper into it; and taking it out a few moments after, he will find the answer to his question.

To make this operation appear the more extraordinary, it will be proper to have a small press or cupboard, at the back of which there is a door that opens into an adjoining room, by which means an assistant having prepared the talisman, may place it in the cupboard the moment before it is wanted. This contrivance will be useful on many other occasions.

8. PROVIDE an urn of wood or metal about six inches high, and two and a half diameter in the widest part, and of such figure in other respects as you think proper (see fig. 9.). Let there be a cylinder of copper C, (fig. 10.) of about one-eighth of an inch diameter, which is to fill a hole AB made in the urn. The top of this cylinder is to be in the top of the urn, so that it may be easily taken out. To this urn there must be a cover D, which fits it exactly.

On a small square piece of paper draw the figure of a flower or leaf, with that sort of sympathetic ink whose colour most resembles it. You then present several sorts of flowers or leaves to a person, and desire him to choose any one of them. Then put that flower on a chafingdish of hot coals; and, taking the paper on which it is secretly drawn, you give it to the person to examine, and then put it in the urn, having previously heated the cylinder (K). Then taking some of the ashes of the burnt flower, you strew them over the paper, after which you take it out and show the company the figure of that flower. While the flower is burning, you may sprinkle some powder over it, suppose that of saltpetre; and by that, mixed with the ashes of the flower, the company may imagine the effect is produced.

The press or cupboard mentioned in the preceding experiment, will be here very convenient for heating the cylinder and placing it in the urn. A similar deception may be performed by putting the paper in a copper vessel, that may be placed on an iron plate over the chafingdish in which the flower is burnt. But this method has not so mysterious an appearance as the other, and in some persons may cause a suspicion that the effect is produced by heat.

9. To perform this experiment, you must observe, that there are several letters which may be changed into others, without any appearance of the alteration; as, the *a* into *d*, the *c* into *a*, *e*, *d*, *g*, *o*, or *q*; the *i* into *b*, *d*, or *l*, the *l* into *t*, the *o* into *a*, *d*, *g*, or *q*, the *v* into *y*, &c.

Take a parcel of cards, suppose 20, and on one of them write, with the ink of the fourth class, the word *law* (L), and on the other, with the same ink, the words *old woman*; then holding them to the fire, they will both become visible. Now you will observe, that

5 E by

(H) If the axis be made to pass through the top of the pedestal, this opening will not be necessary.

(1) These months and the index are of no other use than to give the experiment an air of greater mystery.

(K) There are some sorts of sympathetic inks that require much more heat than others.

(L) These letters should not be joined.

The magic urn.

The cards.

by altering the *a* in the word *law* into *d*, and adding *o* before the *l*, and *oman* after the *w*, it becomes *old woman*. Therefore, you make those alterations with the invisible ink, and let it remain so. On the rest of the cards you write any words you think fit.

Present the cards in such a manner to two persons, that one of them shall draw the word *law*, and the other the words *old woman*. You then tell the person who drew the word *law*, that it shall disappear, and the words on the other card shall be wrote in its place; and that you may not change the cards, desire each of the parties to write his name on his card. Then putting the cards together, and holding them before the fire, as if to dry the names just wrote, the word *law* will presently change into *old woman*.

This experiment may be varied by fixing on a word that may be changed into three other words, and making four persons draw the cards on which those words are wrote; and it may be further diversified by choosing three such words, as that the first can be changed into the second, and the second into the third. You then tell him who drew the first word, that it shall be changed into that drawn by the second person; and him you tell, that his word shall be changed into that of the third person.

The oracular letters.

10. WRITE on several slips of paper different questions, and such as may be answered by the name of some person; for example, Who is the merriest man in the company? Answer, Mr \* \* \*. To whom will Miss \* \* \* be married? Answer, To Mr \* \* \*. These questions are to be wrote in the sympathetic ink of this class, and exposed to the fire, and the answers wrote in the same ink, and left invisible. The papers are to be folded in form of letters, and in such manner that the part where the name is wrote shall be directly under the seal, and the heat of the wax will make it visible. Then give the letter to the person who requires the answer, and he will find it plainly wrote.

A deception similar to this may be made with a number of blank cards, on each of which an ace of spades is drawn with the invisible ink; then let a person choose any one of them, and inclose it in a letter-case, prepared in such manner that the figure of the ace shall be directly under the seal, and on opening the letter it will be immediately visible.

#### DECEPTIONS with CLASS V.

The incomprehensible writing.

11. HAVE a box that is divided into three parts after the same manner as the talisman in the 21st experiment, except that, instead of being triangular, it must be of a long square (see fig. 14.) Divide its top B into two equal parts D and E, as in fig. 13. and to the part D adjust a plate of copper L, about one quarter of an inch thick, and under both the plate L and the opening E place a cloth. The upper part C must have a button by which it may be fixed on the cover B, so as to appear of one piece with it.

At the bottom of the box place a piece of cloth, or other stuff, on which you may stamp certain myste-

rious characters, and observe that the bottom of the cover must rest upon this cloth.

Then provide a slip of paper GH (fig. 12.) of the same size with the bottom of the box; and at each end of it write, with the green sympathetic ink, the name of a different card, and make some private mark by which you can tell at which end each name is wrote (M).

Take a parcel of cards, and offer those two of them whose names are wrote on the paper to the two persons, that they may draw them. You tell the parties to keep their cards to themselves, and you propose to make the names of those cards appear upon a slip of paper, which you put into the box. You then ask which name of the two cards shall appear first. The copper-plate being previously heated and placed in the cover, you put it over that end of the paper on which is the name required, and it will presently appear. Then taking the paper out and showing the name wrote, you put it in again, turning the other end to the side of the box where the plate is, and it will in like manner become visible.

The first name may be made to disappear at the same time that the second appears, if the cloth at the end opposite to that where the plate is be made damp.

12. TAKE a print that represents winter, and trace over the proper parts of the trees, plants, and ground, with the green sympathetic ink; observing to make some parts deeper than others, according to their distance. When those parts are dry, paint the other objects with their natural colours. Then put the print in a frame with a glass, and cover the back of it with a paper that is paled over its border only.

Winter changed into spring.

When this print is exposed to the heat of a moderate fire, or to the warm rays of the sun, all the grass and foliage will turn to a pleasing green; and if a yellow tint be given to some parts of the print, before the sympathetic ink be drawn over, this green will be of different shades; and the scene that a minute before represented winter, will now be changed to spring. When this print is placed in the cold, winter will again appear, and will again be driven away by the warm rays of the sun. This alternate change of seasons may be repeated as often as you please; remembering, however, as was before observed, not to make the print at any time too hot, for then a faded autumn will for ever remain.

#### DECEPTIONS with CLASS VII.

13. PROVIDE a number of artificial flowers, such as roses, jonquils, pinks, or any other you find convenient. These flowers must be made of white thread or silk, and their leaves of parchment. Dip the roses in the red sympathetic ink, the jonquils in the yellow, the pinks in the violet, and their leaves in a solution of salt of tartar. When they are all dry, form them into small bouquets, which will all appear white, and may be used in this experiment, either the day they are dipped, or several days after.

You take one of these bouquets, and after showing the

(M) That there may be no suspicion of the paper being prepared, you may cut it from a whole sheet, before the company, having previously wrote the names.

the company that every part of it is white, you dip it in an infusion of any of the blue flowers mentioned under the article *COLOUR-Making*, n<sup>o</sup> 13. and, drawing it presently out, all the flowers and leaves will appear in their natural colours (N).

The transcolored writing.

14. WRITE on a paper, with the violet liquor, as many letters or words as you please; and ask any person whether he will have that writing turn to yellow, green, or red.

Have a sponge with three sides that you can readily distinguish, and dip each of its sides in one of the three sympathetic inks. Draw the side of the sponge that corresponds to the colour the person has chose, over the writing once only; and it will directly change to the colour required (o).

Seçt. III. *Miscellaneous Performances.*

To tell odds or evens.

15. A person having an even number of counters in one hand, and an odd number in the other, to tell in which hand the odd or even number is. LET the person multiply the number in his right-hand by an odd number, and the number in his left-hand by an even number, and tell you if the sum of the products added together be odd or even. If it be even, the even number is in the right hand; but if it be odd, the even number is in the left hand.

Example.

1. Number in the } 18 In the left 7  
 right hand }  
 Multipliers 3                    2  
                   54                    14  
                   14  
 Their sum 68

2. Number in the } 7 In the left 18  
 right hand }  
 Multipliers 3                    2  
                   21                    36  
                   36  
 Their sum 57

To tell at what hour any person intends to rise.

16. To tell, by the dial of a watch, at what hour any person intends to rise. LET the person set the hand of the dial to any hour he pleases, and tell you what hour that is; and to the number of that hour you add, in your mind, 12. Then tell him to count privately the number of that amount upon the dial, beginning with the next hour to that on which he proposes to rise, and counting backwards, first reckoning the number of the hour at which he has placed the hand. An example will make this plain.

Suppose the hour at which he intends to rise be 8, and that he has placed the hand at 5. You add 12 to 5, and tell him to count 17 on the dial, first reckon-

ing 5, the hour at which the index stands, and counting backwards from the hour at which he intends to rise; and the number 17 will necessarily end at 8, which shows that to be the hour he chose.

That the hour at which the counting ends must be that on which he proposed to rise, will be evident on a little reflection; for if he had began at that hour and counted 12, he would necessarily have come to it again; and calling the number 17, by adding 5 to it, only serves to disguise the matter, but can make no fort of difference in the counting.

17. If the number 11 be multiplied by any one of the nine digits, the two figures of the product will always be similar. As follows:

11	11	11	11	11	11	11	11	11
1	2	3	4	5	6	7	8	9
—	—	—	—	—	—	—	—	—
11	22	33	44	55	66	77	88	99

Place a parcel of counters on a table, and propose to any one to add, alternately, a certain number of those counters, till they amount to 100, but never to add more than 10 at a time. You tell him, moreover, that, if you stake first, he shall never make the even century, but you will. In order to which, you must first stake 1, and remembering the order of the above series, 11, 22, 33, &c. you constantly add, to what he stakes, as many as will make one more than the numbers of that series, that is, as will make 12, 23, 34, &c. till you come to 89, after which the other party cannot make the century himself, nor prevent you from making it.

If the other party has no knowledge of numbers, you may stake any other number first, under ten, provided you take care to secure some one of the last terms, as 56, 67, 78, &c.

This deception may be performed with other numbers; and in order to succeed, you must divide the number to be attained by a number that has one digit more than what you can stake each time, and the remainder will be the number you must first stake. Observe, that, to be sure of success, there must be always a remainder. Suppose, for example, the number to be attained is 52, making use of a pack of cards instead of counters, and that you are never to add more than 6; then divide 52 by the next number above 6, that is, by 7, and the remainder, which is 3, will be the number you must stake first; and whatever the other stakes, you must add as much to it as will make it equal to the number by which you divided, that is, 7. Therefore, if his first stake be 1, you must stake 6, &c. so that your second stake will make the heap 10, your third stake will make it 17, and so on, till you come to 45, when, as he cannot stake more than 6, you must make the number 52.

In this, as in the former case, if the other person has no knowledge of numbers, you may stake any number first under 7; or you may let him stake first, only taking care to secure either of the numbers 10, 17, 24, 31, &c. after which he cannot make 52, if

5 E 2

you

(N) The liquor should be put in a sort of jar with a narrow neck, that it may not be seen by the company; and you should draw the flowers gently out, that the liquor may drop if thin, and they may have time to acquire their colours.

(o) The sponge should be well cleaned immediately after the experiment.

you constantly add as many to his stake as will make it 7.

To tell what number a person privately fixes on.

18. *A person privately fixing on any number, to tell him that number.* AFTER the person has fixed on a number, bid him double it and add 4 to that sum, then multiply the whole by 5; to the product let him add 12, and multiply the amount by 10. From the sum of the whole let him deduct 320, and tell you the remainder; from which if you cut off the two last figures, the number that remains will be that fixed on.

*Example.*

Let the number chosen be	-	-	7
Which doubled is	-	-	14
And 4 added to it, makes	-	-	18
Which multiplied by 5, gives	-	-	90
To which 12 being added, it is	-	-	102
That multiplied by 10, makes	-	-	1020
From which deducting 320, the remainder is	-	-	700
And by striking off the two cyphers, it becomes the original number	-	-	7

To tell the number of points thrown up by 3 dice, without seeing them.

19. *Three dice being thrown on a table, to tell the number of each of them, and the order in which they stand.* LET the person who has thrown the dice double the number of that next his left hand, and add 5 to that sum; then multiply the amount by 5, and to the product add the number of the middle die; then let the whole be multiplied by 10, and to that product add the number of the third die. From the total let there be subtracted 250, and the figures of the number that remains will answer to the points of the three dice as they stand on the table.

*Example.* Suppose the points of the three dice thrown on the table to be 4, 6, and 2,

Then the double of the first die will be	8
To which add	5
<hr/>	
	13
<hr/>	
	5
<hr/>	
That sum multiplied by 5 will be	65
To which add the number of the middle die	6
<hr/>	
	71
<hr/>	
And multiply the sum by	10
<hr/>	
	710
To that product add the number of the third die	2
<hr/>	
From the total	712
Subtract	250
<hr/>	
	264

That sum multiplied by 5 will be - 65  
To which add the number of the middle die - 6

And multiply the sum by - - - 10

To that product add the number of the third die - 2

From the total - 712  
Subtract - 250

And the three remaining figures 264 will answer to the numbers on the dice, and show the order in which they stand.

To tell on what finger, joint, &c. a ring has been privately put.

20. *Some person in company having put a ring privately on one of his fingers; to name the person, the hand, the finger, and the joint, on which it is placed.* LET a third person double the number of the order in which he stands who has the ring, and add 5 to that number; then multiply that sum by 5, and to the product add 10. Let him next add 1 to the last number if the ring be on the right hand, and 2 if on the left, and multiply the whole by 10: to this product he must add the number of the finger (counting the thumb as the first finger), and multiply the whole again by 10. Let

him then add the number of the joint; and, lastly, to the whole join 35.

He is then to tell you the amount of the whole, from which you are to subtract 3535, and the remainder will consist of four figures, the first of which will express the rank in which the person stands, the second the hand (the number 1 signifying the right hand, and 2 the left), the third number the finger, and the fourth the joint.

*Example.* Suppose the person who stands the third in order has put the ring upon the second joint of the thumb of his left hand; then

The double of the rank of the third person is 6  
To which add

5  

---

11  
Multiply the sum by

5  

---

55  
10  
And the number of the left hand

2  

---

67  
Which being multiplied by

10  

---

670  
To which add the number of the thumb

1  

---

671  
And multiply again by

10  

---

6710  
Then add the number of the joint

2  
And lastly the number  
35

---

6747  
From which deducting  
3535

---

3212  
The remainder is  
Of which, as we have said, the 3 denotes the third person, the 2 the left hand, the 1 the thumb, and the last 2 the second joint.

21. COVER the outside of a small memorandum-book with black paper, and in one of its inside covers make a flap, to open secretly, and observe there must be nothing over the flap but the black paper that covers the book.

Mix foot with black or brown soap, with which rub the side of the black paper next the flap; then wipe it quite clean, so that a white paper pressed against it will not receive any mark.

Provide a black-lead pencil that will not mark without pressing hard on the paper. Have likewise a small box, about the size of the memorandum-book, and that opens on both sides, but on one of them by a private method. Give a person the pencil, and a slip of thin paper, on which he is to write what he thinks proper: you present him the memorandum-book at the same time, that he may not write on the bare board. You tell him to keep what he writes to himself, and direct him to burn it on an iron plate laid on a chafingdish of coals, and give you the ashes. You then go into another room to fetch your magic box above described, and take with you the memorandum-book.

Having previously placed a paper under the flap in the cover of the book, when he presses hard with the pencil,

The burnt writing re-  
flected.

pencil, to write on the paper, every stroke, by means of the stuff rubbed on the black paper, will appear on that under the flap. You therefore take it out, and put it into one side of the box.

You then return to the other room, and taking a slip of blank paper, you put it into the other side of the box, throwing the ashes of the burnt paper over it. Then shaking the box for a few moments, and at the same time turning it dexterously over, you open the other side, and show the person the paper you first put in, the writing on which he will readily acknowledge to be his.

The trans-  
posable  
pieces.

22. TAKE two guineas and two shillings, and grind part of them away, on one side only, so that they may be but of half the common thickness; and observe that they must be quite thin at the edge: then rivet a guinea and a shilling together. Lay one of these double pieces, with the shilling upwards, on the palm of your hand, at the bottom of your three first fingers; and lay the other piece, with the guinea upward, in like manner, in the other hand. Let the company take notice in which hand is the guinea, and in which the shilling. Then as you shut your hands, you naturally turn the pieces over; and when you open them again, the shilling and the guinea will appear to have changed their places.

The pen-  
cervative  
guinea.

23. PROVIDE a round tin-box, of the size of a large snuff-box; and in this place eight other boxes, which will go easily into each other, and let the least of them be of a size to hold a guinea. Each of these boxes should shut with a hinge: and to the least of them there must be a small lock, that is fastened with a spring, but cannot be opened without a key: and observe that all these boxes must shut so freely, that they may be all closed at once. Place these boxes in each other, with their tops open (see fig. 12.), in the drawer of the table on which you make your experiments; or, if you please, in your pocket, in such a manner that they cannot be displaced.

Then ask a person to lend you a new guinea, and desire him to mark it, that it may not be changed. You take this piece in one hand, and in the other you have another of the same appearance; and putting your hand in the drawer you slip the piece that is marked into the least box, and, shutting them all at once, you take them out. Then showing the piece you have in your hand, and which the company suppose to be the same that was marked, you pretend to make it pass through the box, and dexterously convey it away.

You then present the box, for the spectators do not yet know there are more than one, to any person in company; who, when he opens it, finds another, and another, till he comes to the last, but that he cannot open without the key (see fig. 13.) which you then give him, and retiring to a distant part of the room, you tell him to take out the guinea himself, and see if it be that he marked.

This deception may be made more surprising, by putting the key into the snuff-box of one of the company; which you may do by asking him for a pinch of his snuff, and at the same time conceal the key, which must be very small, among the snuff: and when the person who is to open the box asks for the key, you tell him that one of the company has it in his snuff-

box. This part of the deception may likewise be performed by means of a confederate.

24. ABCD, fig. 15. represents a small wooden box The three magic pictures. seven or eight inches long, two and an half broad, and half an inch deep; the bottom of which, by means of two cross-pieces, is divided into three equal parts. EFGH represents the lid, which is fastened to the bottom by a hinge, and has in front a small plate shaped like a lock, and two small eyes for hooks which serve to fasten it when it is shut. ILM are three small flexible springs, flat, and about  $\frac{3}{4}$  inch long. NOP are three wooden tablets of the same size, upon which are marked the figures 3, 4, and 5. The tablets are of different thicknesses, and the difference is so small as not to be perceived by the eye. The outside of the box is covered with shagreen or morocco leather, and on the inside with silk taffery; these coverings being indispensibly necessary to hide the three small springs abovementioned. Fig. 14. shows the two hinges E and F bent close to the top of the lid ABCD; the piece of brass G, similar to a lock, being also curved to the lid. A small brass stud is rivetted upon the end of each of these springs inserted into the lid, and passes through the curved part of each of the hinges and the lock; so that on the outside they appear as the heads of small pins which fasten them upon the lid. These small studs will be elevated more or less according to the thicknesses of the tablets, that may be shut up in each of the partitions in which they may be found placed; so that the tablet N elevates them more than the tablet O, and the latter less than P; though these elevations are but barely sensible to the sight or touch, and that by a person accustomed to look at or handle them. Thus it may be easily known in whatever order the tablets are placed, however carefully shut up; and consequently the numbers named as inclosed.

Plate  
CCLXVII.  
fig. 14, 15.

Give now the box to any indifferent person, leave him at liberty to form with the tablets any number he pleases, desiring him to return the box well shut up; then taking the box, and determining by the touch, or rather by the eye, what order the tablets are in, it will be very surprising to hear you declare the number without seeing it.

N. B. It will still be equally possible to discover the number, though the tablets should be returned with the bottom upwards, or even though one should be withdrawn in order to defeat your design; particularly if care has been taken to make the studs remain even with the plates when a number is omitted.

25. To discover any particular counter which has been The numerical table. secretly placed within a box that turns upon it.—This table, which is made of wood, is represented by A, fig. 16. It is of an hexagonal shape, and about three or four inches diameter. For the sake of neatness in appearance, a proportionably sized pillar with a foot is fixed to it. Round a centre there turns a small round box B of about  $\frac{3}{4}$  inch diameter in the inside, the lid of which takes off at B. At the bottom of this box, near the circumference in the inside, is fixed a brass pin to fit a hole made in a flat ivory counter shown at b, fig. 17. The pin and counter are represented in fig. 18. which is a flat view of fig. 16 with the lid of the box B taken off. Opposite to the pin b,

in the same figure, D represents a fine dot designed as a secret mark on the outside of the box, which serves always as a guide to the number of the counter privately placed in the inside of the box, as is afterwards particularly explained. Upon one of the corners of the table is an ivory mark C, fig. 16. and 18. which serves to place the spot *a* upon the counters in its proper position. See fig. 17. There are 12 counters fitted to the box B, marked 10, 20, &c. as far as 120, on the middle of each. On each of these counters is the hole *b*, fig. 17. and 18. which goes over the pin in the bottom of the box; and on one side of this hole a red or black spot is placed in the following manner. When n<sup>o</sup> 10 is put into the box, the spot must be so far to the left hand of the hole, that when it is brought to the mark C, fig. 18. the hole *b* will be opposite to the side marked 1. When n<sup>o</sup> 20 is put in, the spot being brought to the mark C will carry the hole to the corner marked 2. When n<sup>o</sup> 30 is put in, and the spot brought opposite to C, the hole will be brought against the side marked 3, as is shown in the figure, and so on for the rest. Therefore, as opposite to the brass pin, or hole in the counter on the outside of the box B, there is a secret mark D already mentioned, this must serve as an index to the number contained in the box, according as it is opposite to a side or corner of the table.

Give now the table with the box and the 12 counters to any person, and desire him to put one of the counters secretly into the box, keeping the rest to himself; and, after having placed the hole over the pin in the box, to place particularly, by turning the box round, the spot *a* against the mark C on the table. Let him then cover the box, give you the table, and keep the counters to himself. Observe then privately what side or corner the secret outside mark D stands against, reckon the tens accordingly, and tell him the number.

*The magic well.* 26. To draw out of the well with a bucket any one of four liquors which have been previously mixed and put into it.—Provide two tin cylinders of seven or eight inches height; the diameter of the largest, represented by AB fig. 19. to be four inches, and that of the least, CD, two inches. Place the small one within the larger, and connect them together by folding to them four tin partitions, making the equal spaces *e, f, g, b*. Turn a piece of wood three inches thick, hollow within, and lined with tin, of which a section is given, fig. 20. Into this the exterior cylinder should be closely fitted at *a* and *b*. Another circle of wood (of which a section is given fig. 21.), hollowed at *a, b, and c*, is also to be procured, and which may cover exactly the space between the two cylinders; and, lastly, let the whole be constructed in such a manner, that when these three separate pieces are placed together, they may represent a well, as in fig. 22. The two brass or wooden pillars AA, with the axis and handle C, serve to let down and draw up a small glass bucket B, an inch and an half in diameter. Make also four tin reservoirs of the same height with the cylinder, and so shaped as to fill the four spaces *e, f, g, b*, (fig. 19.) which must be well closed at their extremities B and C. On the top of each make a small hole about the tenth part of an inch diameter, and folder at the base C a small tube D, the end of which should be bent towards the inside

of the well when the reservoir is placed in it. Solder on the top of each reservoir a small spring lever and prop ABDE, fig. 23. This spring will serve always to press the end of the lever D down upon the hole at the top of the reservoir B; and in order to cover it more perfectly, a small piece of leather is to be glued on to the end of the lever D. Lastly, a small peg or stud C is placed at the end of each of the levers, and which must be close to the under part of the wooden circle which covers the reservoirs. To conceal these studs, and at the same time to be able to press upon them with the fingers, circular apertures, as shown in fig. 21. must be made in the piece of wood, the top covered with a piece of vellum, and the whole neatly painted with oil colour.

It now you plunge one of these reservoirs perpendicularly into any liquor, in pressing on the stud, so as to uncover the hole at the top, it will be filled with the liquor in proportion to the depth to which it is immersed; and as long as the lever continues to press upon the hole by means of the spring, the liquor cannot run out for want of air, though it will do so the moment the stud is pressed upon and the air admitted. If the reservoir is properly placed, then the liquor will flow out of it into the glass-bucket when let down to a proper depth.

Fill now the four reservoirs with the four different liquors; putting them in their places, and covering them with the circular top. Take a quantity of the same liquors, mix them well together, and pour the whole into the well; after which you may draw out any one which the company desires, by letting down the bucket, and pressing secretly upon the stud belonging to the reservoir which contains it, and which will thus discharge the liquor it contains.

27. PROVIDE a small tin mortar, that is double, as The reservoir A (fig. 8.), whose bottom B turns round on an axis, tated flow- by means of a spring which communicates with the er. piece C. There must be a hollow space under the Plate false bottom. To the under side of the bottom CCLXVI. fasten, by a thread of fine silk, a flower, with its stalk and leaves.

Then take a flower that exactly resembles the other, and plucking it from the stalk, and all the leaves from each other, put them into the mortar, and pound them with a small peltle; after which you show the mortar to the company, that they may see the parts are all bruised.

Then taking the mortar up in your hands, you hold it over the flame of a lamp or candle, by whose warmth the flower is supposed to be restored; and at the same time pressing the piece at C, the bottom will turn round, the bruised parts descending into the space under the bottom, and the whole flower will be at top: you then put your hand into the mortar, and easily breaking the silk thread, which may be very short as well as fine, you take the flower out and present it to the company.

There is an experiment similar to this, in which a live bird is concealed at the bottom of the mortar, and one that is dead is pounded in it; after which, by the motion of the bottom, the live bird is set at liberty. But surely the pounding a bird in a mortar, though it be dead, must produce, in persons of any delicacy, more disgust than entertainment.

Fig. 21.

The lumi-  
ous oracle.

28. PROCURE a tin box ABCD (fig. 1.) about eight inches high, four wide, and two deep, and let it be fixed on the wooden stand E. On two of the insides let there be a groove FG; and in the front an opening I, three inches wide and one high.

At the back of the box let there be a little tin-door, that opens outward, by which two wax candles M may be put in. Let the top of the box have a cover of the same metal, in which there are several holes, and which may be taken off at pleasure.

Provide a double glass OP (fig. 2.) constructed in the same manner as that in the last experiment. On one of its sides you are to paste a black paper, the length of which is to be divided into three parts, and the breadth into fifteen; in every two of these fifteen divisions you cut out letters, which will make in the whole three answers to three questions that may be proposed. On the other side of the glass paste a very thin paper, and to the top fasten a small cord, by which they may be made to rise or descend in the groove FG.

Then take a slip of pasteboard RS (fig. 3.), one inch and a half wide and three inches long, which is to be divided into fifteen equal parts similar to those of the paper OP, and cut out spaces, as in the figure, so that this paper, sliding horizontally before OP, will either cover or conceal the letters cut in that.

This pasteboard is to slide between two brass wires, and is to be fastened to one side of the box, by a string that communicates with a small brass spring; and to the other side, by a string fastened to the box by a small piece of wax, so situated that the string may be easily set at liberty by the heat of the candles placed in the box.

Take a parcel of cards, and write on them different questions, three of which are to correspond with the answers on the glass. Shuffle these cards, and let a person draw any one of the three questions. Then by raising the glass you bring the answer against the hole

in the front of the box. You next place the candles in the box, the heat of which will melt the wax that holds the paper RS, which being then drawn by the spring, the answer will be visible; and in proportion as the composition between the glasses becomes diluted by the increase of the heat, the letters will become more strongly illuminated.

The letters cut in the paper may be made to answer several different questions, as has been explained in other experiments; and the whole parcel of cards may consist of questions that may be answered by one or other of the three divisions in the paper.

29. MAKE a tin box ABCD (fig. 4.), with a cover M, that takes off. Let this box be supported by the pedestal FGHI, of the same metal, and on which there is a little door L. In the front of this box is to be a glass O.

A flower  
produced  
from its  
ashes.

In a groove, at a small distance from O, place a double glass of the same sort with that in the last experiment. Between the front and back glasses place a small upright tin tube supported by the cross-piece R. Let there be also a small chafingdish placed in the pedestal FGHI. The box is to be open behind. You privately place a flower (Q) in the tin tube R; and presenting one that resembles it to any person (R), desire him to burn it on the coals in the chafingdish.

You then strew some powder over the coals, which may be supposed to aid the ashes in producing the flower; and then put the chafingdish in the pedestal, under the box. As the heat by degrees melts the composition between the glasses, the flower will gradually appear; but when the chafingdish is taken away, and the power of the ashes is supposed to be removed, the flower soon disappears.

For entertaining experiments, illusions, &c. of a philosophical nature, see the articles ACOUSTICS, CATOPTICS, CHROMATICS, DIOPTRICS, ELECTRICITY, HYDROSTATICS, MAGNETISM, PYROTECHNICS, &c.

L E G

Leger-line,  
Leghorn.

LEGER-LINE, in music, one added to the staff of five lines, when the ascending or descending notes run very high or low: there are sometimes many of these lines both above and below the staff, to the number of four or five.

LEGHORN, anciently called *Liburnus Portus*, but by the modern Italians *Livorno*, a handsome town of Italy, in the duchy of Tuscany, and a free port, about 30 miles south west from Florence, in the territory of Pisa. The only defect of the harbour is its being too shallow for large ships. Cosmo I. had this town in exchange for Sarzana, from the Genoeze; and it is the only sea-port in the duchy. It was then but a mean unhealthy place; but is now very handsome, and well-built, with broad, straight, parallel streets. It is also well fortified; but wants good water, which must be

L E G

brought from Pisa, 14 miles distant. It is about 2 miles in circuit, and the general form of it is square. Part of it has the convenience of canals; one of which is 5 miles in length, and, joining the Arno, merchandise and passengers are thus conveyed to Pisa. The port, consisting of two havens, one for the duke's galleys, and the other for merchant ships, is surrounded with a double mole, above a mile and a half in length, and defended, together with the town, by a good citadel and 12 forts. Roman Catholics, Jews, Greeks, Armenians, Mahometans, and even the English factory, are indulged in the public exercise of their religion; but other Protestants must be satisfied with the private. The trade carried on here is very great, and most of it passes through the hands of the Jews. Though only two piastres, or scudi, are paid for every bale,

Leghorn.

(Q) This flower must not be placed so near as to make it in the least degree visible.

(R) You may present several flowers, and let the person choose any one of them. In this case, while he is burning the flower, you fetch the box from another apartment, and at the same time put in a corresponding flower, which will make the experiment still more surprising.

Leghorn  
||  
Legion.

bale, great or small, imported or exported, yet the duties on all provisions and commodities brought from the continent to the town are very heavy. The number of the inhabitants is said to be about 45,000; and one third of these are Jews, who live in a particular quarter, but without any mark of distinction, and have a fine synagogue. They have engrossed the coral manufactory, have a considerable trade, and possess the chief riches of the place. The garrison consists of 2000 men. The walks on the ramparts are very agreeable. There is good anchorage in the road; but ships riding there are much exposed to the weather and the Barbary corsairs. The number of English families in Leghorn are about 36; they are much favoured by the government, and carry on a good trade. The power of the inquisition is limited to ecclesiastical matters and Roman Catholics. There are a great many Turkish slaves here, brought in by the duke's galleys, who are often sent out on a cruize against the corsairs of Barbary. The lighthouse stands on a rock in the sea; near which is the Lazaretto, where quarantine is performed. Another source, from which the duke draws a great revenue, is the monopoly of brandy, tobacco, and salt; but that, with the heavy duties, makes provisions dear. The Turks, who are not slaves, live in a particular quarter, near that of the Jews. The common prostitutes also have a particular place assigned them, out of which they must not be seen, without leave from the commissary. The number of the rowers in the galleys, whether Turkish slaves, criminals, or volunteers, are about 2000. In the area before the darsena or inner harbour, is a fine statue of Duke Ferdinand, with four Turkish slaves, in bronze, chained to the pedestal. The ducal palace is one of the finest structures in the town, and the ordinary residence of the governor. Leghorn is the see of a bishop, and has a noble cathedral; but the other churches are not remarkable. E. Long. 11. 0. N. Lat. 43. 30.

LEGIO VII. GEMINA, (anc. geog.) a town or station of that legion in the Asturias. Now *Leon*, capital of the province of that name in Spain. W. Long. 6. 5. Lat. 43.—Another LEGIO, a town of Galilee; from which Jerome determines the distances of the places in Galilee; not a bare encampment, though the name might originally be owing to that circumstance; it lay 15 miles to the west of Nazareth, between mount Tabor and the Mediterranean. Now thought to be *Legune*.

LEGION, in Roman antiquity, a body of foot which consisted of different numbers at different periods of time. The word comes from the Latin *legere*, to choose; because, when the legions were raised, they made choice of such of their youth as were most proper to bear arms.

In the time of Romulus the legion consisted of 3000 foot and 300 horse; though, after the reception of the Sabines, it was augmented to 4000. In the war with Hannibal, it was raised to 5000, after this it sunk to 4000 or 4500; this was the number in the time of Polybius. The number of legions kept in pay together, differed according to times and occasions. During the consular state four legions were fitted up every year, and divided betwixt the two consuls; yet we meet with the number of 16 or 18, as the situation of

N<sup>o</sup> 180.

Legion, Legillator.

affairs required. Augustus maintained a standing army of 23 or 25 legions; but this number in after times is seldom found. The different legions borrowed their names from the order in which they were raised; hence we read of *legio prima, secunda, tertia*: but as there might be many *prima, secunda, tertia, &c.* they were furnished from the emperors, as *Augusta, Claudiana, Galbiana, Flavia, Ulpia, Trajana, Antoniana, &c.* or from the provinces which had been conquered by their means, as *Parthica, Scythica, Gallica, Arabica, &c.* or from the deities under whose protection the commanders had particularly placed themselves, as *Minervia, Apollinaris, &c.* or from the region where they were quartered, as *Cretensis, Cyrenaica, Britannica, &c.* or from particular accidents, as *adjutrix, martia, fulminatrix, rapax, victrix*.

Each legion was divided into 10 cohorts, each cohort into 10 companies, and each company into two centuries. The chief commander of the legion was called *legatus*, i. e. lieutenant.

The standards borne by the legions were various; at first, the standard was a wolf, in honour of Romulus's nurse; afterwards an hog, which animal was usually sacrificed at the conclusion of a treaty, to indicate that war is undertaken with a view to peace; sometimes a minotaur, to remind the general of his duty of secrecy, of which the labyrinth was an emblem, and consequently the minotaur; a horse was also borne, also a boar; and Marius, we are told, was the first who changed all these for the eagle.

LEGISLATOR, a lawgiver, or person who establishes the polity and laws of a state. Such was Moses, among the Jews; Lycurgus, among the Lacedaemonians, &c. See *Mosaic Law*.

The first laws amongst the Athenians seem to have been those of Theseus; for what we can find earlier than this period is involved in fable. After Theseus came Draco the Archon, whose laws were said, for their severity, to have been written with blood: by his laws every offence was punished with death; so that stealing an apple, and betraying their country, were treated as equal crimes. These laws were afterwards repealed by Solon, except such as related to murder: By way of distinction, Draco's laws were called *Θρομοι*, and Solon's *Νομοι*. The laws of Solon were in a great measure suspended during the usurpation of Pisistratus; but, after the expulsion of his family, were revived with some additions by Cleisthenes. After this, the form of government was again changed, first by the four hundred, and afterwards by the thirty tyrants; but these forms being over, the ancient laws were again restored in the Archonship of Euclides, and others established at the instance of Diocles, Arilophon, and, last of all, of Demetrius the Phalerian. This is a short sketch of the history of the Athenian legislation, before that state submitted to the Roman yoke. But many laws were enacted by the suffrages of the people on particular exigencies; the decrees of the senate continued to have the force of laws no longer than a year. If a new law was to be proposed to the assembly it was necessary to write it upon a white tablet and fix it up some days before the meeting, lest their judgment should be caught by surprise. The laws were carefully revised every year; and if any of them, from a change of circumstances, were found unsuitable or

pre-

Legitima-  
tion  
||  
Leibnitz.

Leibnit-  
zian.

prejudicial, they were repealed: This was called *παρρηγορία των νόμων*, because the suffrages were given by holding up of hands. The first laws amongst the Grecians were unwritten and composed in verse, that the common people might with more ease commit them to memory. Solon penned his laws upon wooden tablets, called *ἀξίνες*; and some authors with great probability assert, that they were written in the manner called *εὐροπόδες*, from left to right, and from right again to left, in the same manner as oxen walk the furrows in plowing thus,

ΕΚΔΙΟΣ ΑΡ  
ΥΟΣΗΚΥΧ

It was against the law for any person to erase a decree, and certain persons called *Γραμματεῖς*, were appointed to prevent any corruption; whose business it was also to transcribe the old and enter the new ones.

At Rome the people were in a great measure their own legislators; though Solon may be said, in some sense, to have been their legislator, as the decemviri, who were created for the making of laws, borrowed a great number from those of Solon. See **LEX**.

With us the legislative power is lodged in the king, lords, and commons assembled in parliament. See **LAW** and **PARLIAMENT**.

**LEGITIMATION**, an act whereby illegitimate children are rendered legitimate. See **BASTARD**.

**LEGITIME**, in Scots law, that share of the moveable effects belonging to a husband and wife, which upon the husband's death falls to the children.

**LEGUMEN**, or **POD**, in botany; a species of feed-vessel which has two valves or external openings inclosing a number of seeds that are fattened along one suture only. In this last circumstance the feed-vessel in question differs from that termed by botanists *siliqua*, in which the inclosed seeds are fattened alternately to both the sutures or joinings of the pod.

The feed-vessel of all the pea bloom or butterfly-shaped flowers, the *diadelphia* of Linnæus, is of this pod kind. Such, for instance, is the feed-vessel of the pea, vetch, lupine, and broom.

**LEGUMINOUS**, an appellation given to all plants whose fruit is a legumen.

**LEIBNITZ** (Godfrey William-de), an eminent mathematician and philosopher, was born at Leipzig in Saxony in 1646. At the age of 15 years, he applied himself to mathematics at Leipzig and Jena; and in 1663, maintained a thesis *de Principiis Individuationis*. The year following he was admitted master of arts. He read with great attention the Greek philosophers; and endeavoured to reconcile Plato with Aristotle, as he afterwards did Aristotle with Des Cartes. But the study of the law was his principal view; in which faculty he was admitted bachelor in 1665. The year following he would have taken the degree of doctor; but was refused it on pretence that he was too young, though in reality because he had raised himself several enemies by rejecting the principles of Aristotle and the schoolmen. Upon this he went to Altona, where he maintained a thesis *de Casibus Perplexis*, with such applause, that he had the degree of doctor conferred on him. He might have settled to great advantage at Paris; but as it would have been necessary to have embraced the Roman Catholic religion, he refused all offers. In 1673, he went to England; where he became acquainted with Mr Oldenburg, secretary of

the royal society, and Mr John Collins, fellow of that society. In 1676, he returned to England, and thence went into Holland, in order to proceed to Hanover, where he proposed to settle. Upon his arrival there, he applied himself to enrich the duke's library with the best books of all kinds. The duke dying in 1679, his successor Ernest Augustus, then bishop of Osnaburgh, showed our author the same favour as his predecessor had done, and ordered him to write the history of the house of Brunswick. He undertook it, and travelled over Germany and Italy in order to collect materials. The elector of Brandenburg, afterwards king of Prussia, founded an academy at Berlin by his advice; and he was appointed perpetual president, though his affairs would not permit him to reside constantly at Berlin. He projected an academy of the same kind at Dresden; and this design would have been executed, if it had not been prevented by the confusions in Poland. He was engaged likewise in a scheme for an universal language. His writings had long before made him famous over all Europe. Beside the office of privy-counsellor of justice, which the elector of Hanover had given him, the emperor appointed him in 1711 aulic counsellor; and the czar made him privy-counsellor of justice, with a pension of 1000 ducats. He undertook at the same time the establishment of an academy of science at Vienna; but the plague prevented the execution of it. However, the emperor, as a mark of his favour, settled a pension on him of 2000 florins, and promised him another of 4000 if he would come and reside at Vienna. He would have complied with this offer, but he was prevented by death in 1716. His memory was so strong, that in order to fix any thing in it, he had no more to do but to write it once; and he could even in his old age repeat Virgil exactly. He professed the Lutheran religion, but never went to sermon; and upon his death bed, his coachman, who was his favourite servant, desiring him to send for a minister, he refused, saying, *he had no need of one*. Mr Locke and Mr Molyneux plainly seem to think that he was not so great a man as he had the reputation of being. Foreigners did for some time ascribe to him the honour of an invention, of which he received the first hints from Sir Isaac Newton's letters, who had discovered the method of fluxions in 1664 and 1665. But it would be tedious to give the reader a detail of the dispute concerning the right to that invention.

**LEIBNITZIAN** philosophy, or the philosophy of Leibnitz, is a system of philosophy formed and published by its author in the last century, partly in emendation of the Cartesian, and partly in opposition to the Newtonian. The basis of Mr Leibnitz's philosophy was that of Des Cartes; for he retained the Cartesian subtle matter, with the universal plenitude and vortices; and represented the universe as a machine that should proceed for ever by the laws of mechanism, in the most perfect state, by an absolute inviolable necessity, though in some things he differs from Des Cartes. After Sir Isaac Newton's philosophy was published in 1687, he printed an essay on the celestial motions, Act. Etud. 1689, where he admits of the circulation of the ether with Des Cartes, and of gravity with Sir Isaac Newton; though he has not reconciled these principles, nor shown how gravity arose from the impulse

Leibnit-  
zian.

impulse of this ether, nor how to account for the planetary revolutions, and the laws of the planetary motions in their respective orbits. That which he calls the *harmonic circulation*, is the angular velocity of any one planet, which decreases from the perihelium to the aphelium in the same proportion as its distance from the sun increases; but this law does not apply to the motions of the different planets compared together; because the velocities of the planets, at their mean distances, decrease in the same proportion as the square roots of the numbers expressing those distances. Besides, his system is defective, as it does not reconcile the circulation of the ether with the free motions of the comets in all directions, or with the obliquity of the planes of the planetary orbits; nor resolve other objections to which the hypothesis of the plenum and vortices is liable. Soon after the period just mentioned, the dispute commenced concerning the invention of the method of fluxions, which led Mr Leibnitz to take a very decided part in opposition to the philosophy of Sir Isaac Newton. From the wisdom and goodness of the Deity, and his principle of a sufficient reason, he concluded that the universe was a perfect work, or the best that could possibly have been made; and that other things, which were incommodious and evil, were permitted as necessary consequences of what was best: the material system, considered as a perfect machine, can never fall into disorder, or require to be set right; and to suppose that God interposes in it, is to lessen the skill of the author, and the perfection of his work. He expressly charges an impious tendency on the philosophy of Sir Isaac Newton, because he asserts, that the fabric of the universe and course of nature could not continue for ever in its present state, but would require, in process of time, to be re-established or renewed by the hand of its Former. The perfection of the universe, by reason of which it is capable of continuing for ever by mechanical laws in its present state, led Mr Leibnitz to distinguish between the quantity of motion and the force of bodies; and, whilst he owns, in opposition to Des Cartes, that the former varies, to maintain that the quantity of force is for ever the same in the universe, and to measure the forces of bodies by the squares of their velocities.

This system also requires the utter exclusion of atoms, or of any perfectly hard and inflexible bodies. The advocates of it alledge, that according to the law of continuity, as they call a law of nature invented for the sake of the theory, all changes in nature are produced by insensible and infinitely small degrees; so that no body can, in any case, pass from motion to rest, or from rest to motion, without passing through all possible intermediate degrees of motion: whence they conclude, that atoms or perfectly hard bodies are impossible: because if two of them should meet with equal motions, in contrary directions, they would necessarily stop at once, in violation of the law of continuity.

Mr Leibnitz proposes two principles as the foundation of all our knowledge; the first, that it is impossible for a thing to be and not to be at the same time, which, he says, is the foundation of speculative truth: the other is, that nothing is without a sufficient reason why it should be so rather than otherwise; and by this principle, according to him, we make a transition from abstracted truths to natural philosophy. Hence

he concludes, that the mind is naturally determined, in its volitions and elections, by the greatest apparent good, and that it is impossible to make a choice between things perfectly like, which he calls *indiscernibles*; from whence he infers, that two things perfectly like could not have been produced even by the Deity: and he rejects a vacuum, partly because the parts of it must be supposed perfectly like to each other. For the same reason he also rejects atoms, and all similar particles of matter, to each of which, though divisible in *infinitum*, he ascribes a *monad* (Act. Lipsiæ 1698, p. 435.) or active kind of principle, endued, as he says, with perception and appetite. The essence of substance he places in action or activity, or, as he expresses it, in something that is between acting and the faculty of acting. He affirms absolute rest to be impossible, and holds motion, or a sort of *nifus*, to be essential to all material substances. Each monad he describes as representative of the whole universe from its point of sight; and after all, in one of his letters he tells us, that matter is not a substance, but a *substantium*, or *phenoméne bien fondée*. He frequently urges the comparison between the effects of opposite motives on the mind, and of weights placed in the scales of a balance, or of powers acting upon the same body with contrary directions. His learned antagonist Dr Clarke denies that there is a similitude between a balance moved by weights, and a mind acting upon the view of certain motives; because the one is entirely passive, and the other not only is acted upon, but acts also. The mind, he owns, is purely passive in receiving the impression of the motive, which is only a perception, and is not to be confounded with the power of acting after, or in consequence of, that perception. The difference between a man and a machine does not consist only in sensation and intelligence, but in this power of acting also. The balance, for want of this power, cannot move at all when the weights are equal; but a free agent, he says, when there appear two perfectly alike reasonable ways of acting, has still within itself a power of choosing; and it may have strong and very good reasons not to forbear.

The translator of Mosheim's Ecclesiastical History observes, that the progress of Arminianism has declined in Germany and several parts of Switzerland, in consequence of the influence of the Leibnitzian and Wolfian philosophy. Leibnitz and Wolf, by attacking that liberty of indifference, which is supposed to imply the power of acting not only without, but against, motives, struck, he says, at the very foundation of the Arminian system. He adds, that the greatest possible perfection of the universe, considered as the ultimate end of creating goodness, removes from the doctrine of predestination those arbitrary procedures and narrow views with which the Calvinists are supposed to have loaded it, and gives it a new, a more pleasing, and a more philosophical aspect. As the Leibnitzians laid down this great end as the supreme object of God's universal dominion, and the hope to which all his dispensations are directed; so they concluded, that if this end was proposed, it must be accomplished. Hence the doctrine of necessity, to fulfil the purposes of a predestination founded in wisdom and goodness; a necessity, physical and mechanical, in the motions of material and inanimate things, but a necessity moral and

spiritual.

Leibnit-  
zian.

Leicester. spiritual in the voluntary determinations of intelligent beings, in consequence of propellent motives, which produce their effects with certainty, though these effects be contingent, and by no means the offspring of an absolute and essentially immutable fatality. These principles, says the same writer, are evidently applicable to the main doctrines of Calvinism; by them predetermination is confirmed, though modified with respect to its reasons and its end; by them irresistible grace (irresistible in a moral sense) is maintained upon the hypothesis of propellent motives and a moral necessity: the perseverance of the saints is also explicable upon the same system, by a series of moral causes producing a series of moral effects.

LEICESTER, the capital of a county of the same name in England, upon the river Leire, now called *Soare*. From its situation on the Fosse-way, and the many coins and antiquities discovered here, it seems probable that it was a place of some note in the time of the Romans. In the time of the Saxons it was a bishop's see, and afterwards so repaired and fortified by Edelfrida, that it became, according to Matthew Paris, a most wealthy place, having 32 parish-churches; but in Henry the Second's reign it was in a manner quite ruined, for joining in rebellion against him with Robert earl of Leicester. In the reign of Edward III. however, it began to recover by the favour of his son Henry Plantagenet, duke and earl of Lancaster, who founded and endowed a collegiate church and hospital here. It is a borough and corporation, governed by a mayor, recorder, steward, bailiff, 24 aldermen, 48 common-council men, a solicitor, a town-clerk, and two chamberlains. It had its first charter from king John. The freemen are exempt from paying toll in all the fairs and markets of England. It has three hospitals, that mentioned above, built by Henry Plantagenet duke of Lancaster, and capable of supporting 100 aged people decently; another erected and endowed in the reign of Henry VIII. for 12 poor lazars; and another for six poor widows. The castle was a prodigious large building, where the duke of Lancaster kept his court. The hall and kitchen still remain entire, of which the former is very spacious and lofty; and in the tower over one of the gate-ways is kept the magazine for the county militia. There was a famous monastery here, anciently called, from its situation in the meadows, *St Mary de Pratis* or *Prez*. In these meadows is now the course for the horse-race. It is said that Richard III. who was killed at the battle of Bosworth, lies interred in St Margaret's church. The chief business of Leicester is the stocking-trade, which hath produced in general to the amount of 60,000 l. a-year. In a parliament held here in the reign of Henry V. the first law for the burning of heretics was made, levelled against the followers of Wickliffe, who was rector of Lutterworth in this county, and where his pulpit is said still to remain. The town suffered greatly in the civil wars, by two sieges upon the back of one another. It has given the title of *earl* to several noble families. The present earl was created in 1784, and is the marquis of Townshend's son. Its market on Saturday is one of the greatest in England for provisions, especially for corn and cattle; and it has four fairs in the year.

LEICESTERSHIRE, an inland county of England, in form almost circular. It has Nottinghamshire and Derbyshire to the north; Rutlandshire and Lincolnshire on the east; Warwickshire on the west, from which it is parted by the Roman military way called *Watling-street*; and by Northamptonshire on the south; and is about 170 miles in circumference. As it lies at a great distance from the sea, and is free from bogs and marshes, the air is sweet and wholesome. It is a champaign country in general, and abundantly fertile in corn and grass, being watered by several rivers, as the Soare, or Sare, which passes through the middle of it, and abounds in excellent salmon and other fish; the Wreke, Trent, Eye, Sense, Auker, and Aven. These rivers being mostly navigable, greatly facilitate the trade of the county. In some parts there is a great scarcity of fuel, both wood and coal; but in the more hilly parts there is plenty of both, together with great flocks of sheep. Besides wheat, barley, oats, and pease, it produces the best beans in England. They grow so tall and luxuriant in some places, particularly about Barton in the Beans, that they look, towards the harvest-time, like a forest; and the inhabitants eat them not only when they are green, as in other places, but all the year round; for which reason their neighbours nickname them *bean-bellies*. They have plenty of very good wool, of which they not only make great quantities of stockings, but send a great quantity unmanufactured into other parts of England. They make great profit of their corn and pulse; and likewise breed great numbers of coach and dray horses, most of the gentlemen being graziers; and it is not uncommon to rent grass-farms from 500 l. to 2000 l. a-year. It is in the midland circuit, and diocese of Lincoln; and sends four members to parliament, two for Leicester, and two for the county.

LEIGH (Sir Edward), a very learned Englishman, was born at Shawell in Leicestershire, and educated at Magdalen Hall, Oxford. He was a member of the long parliament, and one of the members of the house of commons who were appointed to sit in the assembly of divines. He was afterwards colonel of a regiment for the parliament; but in 1648 was numbered among the Presbyterians who were turned out, and in December he was imprisoned. From this period to the Restoration he employed himself in writing a considerable number of learned and valuable books, which showed profound learning, a knowledge of the languages, and much critical sagacity; and of which a list is given by Anthony Wood. Sir Edward died at his house called Rushall Hall, in Staffordshire, June 2. 1671: and was buried in the chancel of Rushall church.

LEIGHLIN, a town of Ireland, situated in the county of Carlow, and province of Leinster; about 43 miles from Dublin, near the river Barrow. It is a borough, and returns two members to parliament; patronage in the bishop of the diocese, this being a bishopric united to Ferns. At the east end of the church of Old-Leighlin is a famous well covered with great ash-trees, and dedicated to St Lassarian. This place was formerly a city, though now a very mean village, and the cathedral has been kept in good repair. It was a *sole* bishopric, founded in 632, and joined to

Leighton,  
Leinster.

Ferns in 1600. It is reported, that Gurmundus a Danish prince was buried in this church. The last bishop of Leighlin before its union with Ferns, was the Right Rev. Robert Grave, who coming by sea to be installed, suffered shipwreck in the harbour of Dublin, and perished in the waves. This cathedral was burnt to the ground, it is said, by lightning; and rebuilt, A. D. 1232, then dedicated to St Lafarius or Lazarinus, before-mentioned; since the sees were joined, it is made use of as a parish-church. Leighlin-bridge is situated about two miles from this village; it was destroyed by the Irish in 1577. Here are the remains of a castle and of an old abbey. This is a post town, and has fairs in May, September, and October.

LEIGHTON (Robert), archbishop of Glasgow. During Cromwell's usurpation, he was minister of a church near Edinburgh, and distinguished himself by his charity, and his aversion to religious and political disputes. The ministers were then called over yearly in the synod, and were commonly asked, Whether they had preached to the times? "For God's sake (answered Leighton), when all my brethren preach to the times, suffer me to preach about eternity." His moderation, however, giving offence, he retired to a life of privacy. But soon after, he was called by the unanimous voice of the magistrates, to preside over the college of Edinburgh; where, during ten years, he displayed all the talents of a prudent, wife, and learned governor. Soon after the Restoration, when the ill-judged affair of introducing episcopacy into Scotland was resolved on, Leighton was consecrated bishop of Dunblane, and immediately gave an instance of his moderation: for when Sharpe and the other bishops intended to enter Edinburgh in a pompous manner, Leighton remonstrated against it; but finding that what he said had no weight, he left them, and went to Edinburgh alone. Leighton, in his own diocese, set such a remarkable example of moderation, that he was revered even by the most rigid of the opposite party. He went about, preaching without any appearance of pomp; gave all he had to the poor; and removed none of the ministers, however exceptionable he might think their political principles. But finding that none of the other bishops would be induced to join, as he thought, properly in the work, he went to the king, and resigned his bishopric, telling him he would not have a hand in such oppressive measures. Soon after, the king and council, partly induced by this good bishop's remonstrances, and partly by their own observations, resolved to carry on the cause of episcopacy in Scotland on a different plan; and with this view, Leighton was persuaded to accept of the archbishopric of Glasgow, on which he made one effort more; but finding it not in his power to stem the violence of the times, he resigned his archbishopric, and retired into Suffex, where he devoted himself to acts of piety. He died in the year 1684. He was of a most amiable disposition, strict in his life, polite, cheerful, engaging in his manners, and profoundly learned. He left many sermons and useful tracts, which are greatly esteemed.

LEINSTER, the eastern province of Ireland, bounded by Ulster on the north; St George's, or the Irish Channel, on the east and south; and by the provinces of Connaught and Munster on the west. The capital

city of this province and of the kingdom is Dublin. It contains 12 counties, viz. Carlow, Dublin, Kildare, Kilkenny, King's-county, Longford, Louth, Meath, Queen's-county, West-meath, Wexford, and Wicklow. It is the most level and best cultivated province in the kingdom; containing 2,642,958 Irish plantation acres, 858 parishes, 99 baronies, and 53 boroughs; it is about 124 miles long and 74 broad, and extends from 51° 45' to 55° 45' north latitude. Dermot king of Leinster marrying his daughter Eva to Strongbow earl of Pembroke, on his decease made him his universal heir; whereby the Earl inherited the province of Leinster, and was afterwards enfeoffed of it by Hen. II. He died in 1176, and left an only daughter Isabel, espoused to William Marshal earl of Pembroke; by her he had five sons, who succeeded to his great estates in Leinster. This province gives title of Duke to the ancient and noble family of Fitzgerald. In the early ages, this district was almost one continued forest, and was principally the seat of the Kinfeleghs.

LEIPSIC, a large, strong, and populous town of Misnia in Germany, with a castle, and a famous university. It is neat, and regularly built, and the streets are lighted in the night; it carries on a great trade, and has a right to stop and sell the merchandizes designed to pass through it, and the country for 75 miles round has the same privilege. There are three great fairs every year; at the beginning of the year, Easter and Michaelmas, which last 15 days each. There are six handsome colleges belonging to the university, besides the private colleges. The town-house makes an indifferent appearance, but the exchange is a fine structure. The town was taken by the king of Prussia in the late war, but given up by the peace in 1763. It is seated in a plain between the rivers Saale and Muld, near the confluence of the Playffe, the Elster, and the Baide. E. Long. 12. 55. N. Lat. 51. 19.

LEITH, (anciently called *Iwerleith*), the port of Edinburgh, is seated on the banks of the Forth, about two miles from the capital. It is built on both sides of the harbour; by which it is divided into two parts, called *North* and *South Leith*. The communication between these was by a stone-bridge of three arches founded by Robert Ballentyne abbot of Holyrood-house in 1493, but lately pulled down. The harbour is formed by the conflux of the rivulet called the *Water of Leith* with the Frith of Forth. The depth of water, at neap-tides, is about nine feet; but in high spring-tides, it is about 16 feet. In the beginning of the present century, the town-council of Edinburgh improved the harbour at an enormous expence, by extending a stone-pier a considerable way into the sea. In 1777, they erected an additional stone quay towards its west side. Upwards of 100 ships could then lie conveniently in this port: but it can now admit of a much greater number, in consequence of having lately undergone great improvements. In order to enlarge it, the old bridge has been pulled down, and an elegant draw-bridge erected a little to the eastward of the former site. It is accommodated with wet and dry docks, and other conveniences for ship building, which is there carried on to some extent, as vessels come to Leith to be repaired from all parts of Scotland. A new basin and docks

Leipste,  
Leith.

Leith. are proposed to be added; which, when completed, will render this a very capacious, as well as a most safe and convenient, station for trading vessels. And the road of Leith affords good anchorage for ships of the greatest size.

The harbour of Leith was granted to the community of Edinburgh by king Robert in 1329; but the banks of the harbour belonged to Logan of Restalrig, a turbulent and ambitious baron, from whom the citizens were under the necessity of purchasing the bank or waste piece of ground between the houses and the rivulet above mentioned, for the purposes of wharfs, as well as for erecting shops and granaries, neither of which they could do before. As the situation of Leith, however, is much more convenient for trade than that of Edinburgh, which is two miles distant from the harbour, the inhabitants of the metropolis have fallen upon various methods of restraining the trade of Leith. They first purchased, from Logan of Restalrig, an exclusive privilege of carrying on every species of traffic in the town of Leith, and of keeping warehouses and inns for the entertainment of strangers in that place; and in 1483, the town council prohibited, under severe penalties, the citizens of Edinburgh from taking into partnership any inhabitant of Leith. To free themselves from this oppression, the people of Leith purchased the superiority of their town from Logan of Restalrig for 3000 l. Scots, and it was erected into a burgh of barony by the queen-regent, Mary of Lorraine, who promised to erect it into a royal borough. She died, however, before this was accomplished; and upon her death, Francis and Mary, in violation of the private rights of the people of Leith, re sold the superiority to the town of Edinburgh, to whom it has since been confirmed by grants from successive sovereigns.

On the breaking out of the disturbances at the Reformation, the queen-regent caused the whole town to be fortified, that the French troops might have a more ready inlet into the kingdom. It was accordingly surrounded with a wall, having eight ballions: but this wall went no farther than the street now called *Bernard's nook*, because at that time the sea came up the length of that street; and even as late as 1623, a house situated exactly where the weigh-house is at present, is described as bounded on the east by the "sand of the sea-shore." All that space, therefore, on which the row of houses nearest the harbour of Leith now stands, has been gained since that time from the sea.

In the time of Charles I. a fortification was erected at Leith by the Covenanters. Cromwell built a strong fort at the place still called the *citadel* in North Leith; but it was pulled down on the restoration of Charles II. by order of government. A gate with portcullises are the present remains of that fortification.—A palace also appears to have formerly stood here, situated at the north-east boundaries of the former town, on the spot where the present weigh-house stands. It was destroyed by the English in the time of Henry VIII. The remains of this building, called the *king's work*, with a garden, and a piece of waste land that surrounded it, was erected into a barony by James VI. and bestowed upon Bernard Lindsay of Lochill, groom of the chamber to that prince. He is said to have fully repaired, and appropriated it to the recreations

of the court; but it soon fell from its dignity, and became subservient to much more ignoble purposes. The tennis court was converted into a weigh house; and the street which bounds it still bears the name of the founder, from whom it is called *Bernard's nook*.

As Leith lay within the parish of Restalrig, the church of Restalrig was of consequence the place of worship for the inhabitants of Leith; but in 1650 the Assembly ordered that church to be pulled down as a monument of idolatry, so that Leith wanted a parish-church for upwards of 50 years. During that period they resorted for worship to a large and beautiful chapel already built, and dedicated to St Mary, which is now called *South Leith church*; and in 1609 this chapel was by authority of parliament declared to be the parish church of the district; so that Restalrig is now in the parish of South-Leith, as the latter was formerly in that of Restalrig. In 1772, a Chapel of Ease was erected by the inhabitants, as the parish-church was insufficient to contain the number of hearers. There are also an episcopal and several dissenting congregations in Leith. North-Leith is a parish by itself, and the church is situated at what was the north end of the old bridge.

Though a very great trade is carried on between Leith and many foreign ports, yet the articles of export and import fluctuate so much, that it would be useless to enter into any details either as to species or quantity. In general, the imports from France, Spain, and Portugal, are wines, brandy, and fruits; from the West Indies and America, rice, indigo, rum, sugar, and logwood. But the principal foreign trade of Leith is by the eastern seas, for the navigation of which it is most happily situated. To Germany, Holland, and the Baltic, it exports lead, glass-ware, linen and woollen stuffs, and a variety of other goods; and from thence it imports immense quantities of timber, oak-bark, hides, linen rags, pearl ashes, flax, hemp, tar, and many other articles. The Baltic trade, however, is at present rather on the decline; the great extent to which it was carried on for some years past having been chiefly owing to the vast increase of new buildings in Edinburgh and its environs. The coasting trade is at present the principal branch that employs the shipping at Leith, including those which belong to other ports on the Forth, which are said to make about one fourth of the tonnage of the Leith vessels. The ships employed in the London trade are in general of a large size, elegantly constructed, and furnished with excellent accommodations for passengers. They make at an average four voyages up and down in the year. The largest ships in this port, however, are those employed in the Greenland fishery.

The shipping at Leith renders the demand for ropes, sail cloth, and cordage, very considerable. There were lately three different companies who carried on these manufactures, besides some private persons who dealt less considerably. The first of those companies was established in the beginning of the present century; and 20 years ago made, it is said, larger dividends among the partners than any trading or manufacturing company in the nation. There are only three companies at present, but a number of private manufacturers.

In the middle of the last century, a manufactory of green glass was established at the citadel of Leith. Chopin bottles were sold at 4s. 6d. per dozen, and

Leith.

other bottles in proportion. Soon afterwards this article was manufactured also in North Leith; and, in 1707, chopin bottles were sold at 2s. 6d. per dozen, and so proportionably. That house being burnt down in 1746, a new house was built the following year on South-Leith sands, and an additional one in 1764. The annual expence of both houses was between 8000l. and 9000l. Another was afterwards added, and three more have lately been erected. They manufacture not only bottles, but also window-glass and crystal-ware of all sorts.

Manufactures of soft soap and candles were erected by St Clair of Roslin and some merchants; the former in 1750, and the latter in 1770: a manufacture of hard soap was also established in 1770. Besides these, there are a considerable manufacture for making cards with which wool is combed, a great carpet-factory, and several iron-forges. There was also a sugar-house; but it has been given up, as has likewise Mr St Clair's soap-work.

The inhabitants of Leith were divided into four classes; and these erected into corporations by the queen dowager, Mary of Lorraine. These were mariners, maltmen, trades, and traffickers. The first of these consisted of shipmasters and sailors; the second, of malt-makers and brewers; the third, of coopers, bakers, smiths, wrights, &c.; and the fourth, of merchants and shop-keepers. Of these corporations the mariners are the most considerable. They obtained from Mary of Lorraine a gift, afterwards ratified by William and Mary, of one penny duty on the ton of goods in the harbour of Leith, for the support of their poor. This duty, which not many years ago did not amount to 40l. a-year, now rises from 70l. to 120l. as trade flourishes. For the same purpose the shipmasters also pay 6d. a-pound out of their own wages annually; and the like sum they give upon the wages of their sailors. From these and other donations, this corporation is enabled to pay from 600l. to 700l. a-year to their poor. Opposite to South-Leith church there is a large house belonging to them, called the *Trinity-hospital*, because originally consecrated to the Holy Trinity. In this house some of their poor used formerly to be maintained, but now they are all out-pensioners. Besides other apartments, this hospital contains a large handsome hall for the meetings of the corporation. Adjoining to the school-house there is another hospital, called *king James's hospital*; and bears upon its front the cypher and arms of that prince. Here some poor women belonging to the other corporations are maintained.

As the town of Leith was very ill supplied with water, and the streets were neither properly cleaned nor lighted, an act for remedying these defects was passed in the year 1771, appointing certain persons from among the magistrates of Edinburgh, lords of session, inhabitants of Edinburgh and Leith, and members of the corporations of Leith, *commissioners of police*; empowering them to put this act in execution; and, for that purpose, to levy a sum not exceeding 6d. in the pound upon the valued rent of Leith. The great change which has since taken place on the streets of Leith shows the good effect of this act, and that it has

both been judiciously prepared, and attentively executed.

Leith is computed to contain about thirteen thousand inhabitants. The government of the town is vested in a magistrate sent from Edinburgh, having admiral's power; and in two residing bailies elected, by the town-council.

LEITRIM, a county of Ireland, situated in the province of Connaught, is bounded on the north by the bay of Donnegal and part of Fermanagh, on the south and west by Sligo and Roscommon, and on the east by Fermanagh and Cavan. It is a fruitful county; and, though mountainous, produces great herds of black cattle; but has few places of note. It contains 206,830 Irish plantation acres, 21 parishes, 5 baronies, and 2 boroughs, and sends six members to parliament; it is about 42 miles long, and 17 broad.

LEITRIM, the shire town of the county of that name, is pleasantly situated on the banks of the river Shannon, about 80 miles from Dublin; and appears to have been formerly a place of some note. St Mac Liegus, son of Cernac, was bishop here: and his festival is observed on the 8th of February. It has six fairs in the year.

LEIXLIP, a post and fair town of Ireland pleasantly situated in the county of Kildare and province of Leinster, about 8 miles from Dublin. Near it are the ruins of the church and castle of Confy. The castle of Leixlip is beautifully seated on the banks of the river Liffey; it is a fine edifice with large and pleasant gardens, at one side of which is a fine waterfall called the *Salmon-leap*, there being plenty of that species of fish hereabouts. A mile from this is Castletown, the magnificent seat of Mr Conolly. There are three fairs here in the year.

LELAND (John), the great English antiquary, was born in London about the year 1507. Having lost his parents when a child, he had the good fortune to find a friend and patron in one Mr Thomas Miles, who placed him in St Paul's school, of which the grammarian Lilye was master. From that school he was sent to Christ's college, Cambridge; whence, after some years residence, he removed to All-Souls, Oxford. From Oxford he went to Paris, chiefly with a design to study the Greek language, which at that time was but little understood in this kingdom. On his return to England he took orders, and was soon appointed chaplain to king Henry VIII. who also gave him the rectory of Poppeling, in the marshes of Calais, appointed him his librarian, and in 1533 granted to him, by commission under the great seal, the office of king's antiquary; an office never borne by any other person before or since. By this commission he was empowered to search for ancient writings in all the libraries of colleges, abbeys, priories, &c. in his majesty's dominions. We are told by his last biographer, that he renounced popery soon after his return to England; but he quotes no authority. Be this as it may, in 1536, he obtained a dispensation to keep a curate at Poppeling, and set out on his journey in search of antiquities. In this employment he spent six years, during which time he visited every part of England where monuments of antiquity were

Leitrim

||  
Leland.

Leland. to be expected. After his return, in the year 1542, he was presented by the king to the rich rectory of Haseley in Oxfordshire; and in the following year he gave him a prebend of King's College, now Christ's church, in Oxford, besides that of East and West Knowle, in the cathedral of Salisbury. Being thus amply provided for, he retired to a house of his own in the parish of St Michael le Querne in London, where he spent six years more in digesting the materials which he had collected. King Henry VIII. died in 1547; and in a short time after, poor Leland lost his senses. He was at first seized with a deep melancholy, which was succeeded by a total deprivation of his reason. In this dreadful state he continued till the beginning of the year 1552, when he was happily released by death. He was buried in the church of St Michael le Querne, which was destroyed by the fire in 1666. Mr Leland is remembered as a man of great learning, an universal linguist, an excellent Latin poet, and a most indefatigable and skilful antiquary. On his death, king Edward VI. gave all his papers to Sir John Checke, his tutor and Latin secretary of state. The king dying, and Sir John being obliged to leave the kingdom, he gave four folio volumes of Leland's collections to Humphrey Purefoy, Esq; which, in 1612, were by his son given to William Burton, author of the history of Leicestershire. This gentleman also became possessed of the Itinerary in 8 vols folio, which, in 1632, he deposited in the Bodleian library. Many other of Leland's manuscripts, after the death of Sir John Checke, fell into the hands of lord Paget, Sir William Cecil, and others, which at last fortunately came into the possession of Sir John Cotton. These manuscripts were of great use to all our subsequent antiquarians, particularly Cambden, Sir William Dugdale, Stowe, Lambard, Dr Batteley, Ant. Wood, &c. His Itinerary throughout most parts of England and Wales, was published by Mr Hearne, 9 vols 8vo. in 1710-11; as was also his *Collectanea de rebus Britannicis*, 6 vols 8vo. in 1715.

LELAND (John), well known by his writings in defence of Christianity, was born at Wigan in Lancashire in 1691, of eminently pious and virtuous parents. They took the earliest care to season his mind with proper instructions; but, in his sixth year, the small-pox deprived him of his understanding and memory, and expunged all his former ideas. He continued in this deplorable state near a twelvemonth, when his faculties seemed to spring up anew; and though he did not retain the least traces of any impressions made on him before the distemper, yet he now discovered a quick apprehension and strong memory. In a few years after, his parents settled in Dublin, which situation gave him an easy introduction to learning and the sciences. When he was properly qualified by years and study, he was called to be pastor to a congregation of Protestant dissenters in that city. He was an able and acceptable preacher, but his labours were not confined to the pulpit. The many attacks made on Christianity, and by some writers of no contemptible abilities, engaged him to consider the subject with the exactest care, and the most faithful examination. Upon the most deliberate inquiry, the truth and divine original, as well as the excellence and importance of Christianity, appearing to him with great lustre, he published answers to several

authors who successively appeared in that cause. He was indeed a master in this controversy; and his history of it, styled "A View of the Deistical Writers that have appeared in England in the last and present Century, &c." is very greatly and deservedly esteemed. In the decline of life he published another laborious work, intitled, "The Advantage and Necessity of the Christian Revelation, shown from the State of Religion in the ancient Heathen World, especially with respect to the Knowledge and Worship of the One true God; a Rule of moral Duty, and a State of future Rewards and Punishments; to which is prefixed, a long and preliminary Discourse on Natural and Revealed Religion," 2 vols 4to. This noble and extensive subject, the several parts of which have been slightly and occasionally handled by other writers, Leland has treated at large with the greatest care, accuracy, and candour. And, in his "View of the Deistical Writers," his cool and dispassionate manner of treating their arguments, and his solid confutation of them, have contributed more to depress the cause of atheism and infidelity, than the angry zeal of warm disputants. But not only his learning and abilities, but also his amiable temper, great modesty, and exemplary life, recommended his memory to general esteem and affection. He died in 1766.

LELEGEIS, the ancient name of Miletus, from the Leleges, the first inhabitants of it.

LELEGES, anciently a people of Asia, of Greek original; the name denoting "a collection of people:" they first occupied the islands; then passing over to the continent, they settled partly in Myia on the Sinus Adramyttenus, and partly in that part of Ionia next Caria.—There were Leleges also of Laconia. These went to the Trojan war with Altes their king. Achilles plundered their country, and obliged them to retire to the neighbourhood of Halicarnassus, where they fixed their habitation.—The inhabitants of Laconia and of Megara also bore this name for some time, from Lex one of their kings.

LELEX, an Egyptian who came with a colony to Megara, where he reigned about 200 years before the Trojan war. His subjects were called from him *Leleges*.—Also the name of a Greek who was the first king of Laconia in Peloponnesus. His subjects were also called *Leleges*, and the country where he reigned *Lelegia*.

LELY (Sir Peter), an excellent painter, born in Westphalia in the year 1617. He was placed as a disciple with Peter Grebber at Haelem; and in 1641 was induced, by the encouragement Charles I. gave to the fine arts, to come to England. He became state-painter to Charles II. who knighted him; and being as complete a gentleman as a painter, that king took pleasure in conversing with him. He practised portrait-painting, and succeeded so well that he was preferred before all his cotemporaries. Hence he became perpetually involved in business; so that he was thereby prevented from going into Italy to finish the course of his studies, which in his younger days he was very desirous of; however, he made himself amends, by getting the best drawings, prints, and paintings, of the most celebrated Italian masters. Among these were the better part of the Arundel Collection, which he had from that family, many whereof were sold after his death at prodigious

Lemnos.

gious rates, bearing upon them his usual mark of P. L.—The advantage he reaped from this collection, the best chosen of any one of his time, appears from that admirable style which he acquired by daily conversing with the works of those great masters. In his correct draught and beautiful colouring, but more especially in the graceful airs of his heads, and the pleasing variety of his postures, together with the gentle and loose management of the draperies, he excelled most of his predecessors. Yet the critics remark, that he preserved in almost all his female faces a drowsy sweetness of the eyes peculiar to himself; for which he is reckoned a mannerist. The hands of his portraits are remarkably fine and elegantly turned; and he frequently added landscapes in the back-grounds of his pictures, in a style peculiar to himself, and better suited to his subject than most men could do. He excelled likewise in crayon painting. He was familiar with, and much respected by, persons of the greatest eminence in the kingdom. He became enamoured of a beautiful English lady, to whom he was some time after married; and he purchased an estate at Kew in the county of Surrey, to which he often retired in the latter part of his life. He died of an apoplexy in 1680 at London; and was buried at Covent-garden church, where there is a marble monument erected to his memory, with his bust, carved by Mr Gibbons, and a Latin epitaph, written, as is said, by Mr Flatman.

LEMBERG, a town of Poland, capital of Red Russia, seated in the palatinate of Lemburg, on the river Pelteu. It is pretty well fortified, and defended by two citadels, one of which is seated on an eminence without the town. The square, the churches, and the public buildings, are magnificent; and it is a large and rich trading place. It has a Roman catholic archbishop, and an Armenian as well as a Russian bishop; but the Protestants are not tolerated. This city was reduced to the last extremity by the rebel Cossacs and Tartars, and was forced to redeem itself with a large sum of money. In 1672, it was besieged in vain by the Turks; but in 1704, was taken by storm by Char. XII. of Sweden. E. Long. 24. 46. N. Lat. 49. 51.

LEMERY (Nicholas), a celebrated chemist, born at Rouen in Normandy in 1645. After having made the tour of France, he, in 1672, commenced an acquaintance with M. Martyn apothecary to Monsieur the Prince; and performed several courses of chemistry in the laboratory of this chemist at the Hotel de Conde; which brought him to the knowledge and esteem of the prince. He provided himself at length with a laboratory of his own, and might have been made a doctor of physic; but he chose to continue an apothecary, from his attachment to chemistry, in which he opened public lectures; and his confluence of scholars was so great as scarcely to allow him room to perform his operations. The true principles of chemistry in his time were but ill understood; Lemery was the first who abolished the senseless jargon of barbarous terms, reduced the science to clear and simple ideas, and promised nothing that he did not perform. In 1681, he was disturbed on account of his religion; and came to England, where he was well received by Charles II.: but affairs not promising him the same tranquillity, he returned to France, and sought for shelter under a Doctor's degree; but the revocation of the edict of Nantz

N<sup>o</sup> 180.

drove him into the Romish communion to avoid perfection. He then became associate chemist and pensionary in the royal academy of sciences, and died in 1715. He wrote, A course of chemistry; An universal pharmacopœia; An universal treatise of drugs; and, A treatise on antimony.

LEMING, in zoology. See Mus.

LEMMA, (of λαμβανω, "I assume,") in mathematics, denotes a previous proposition, laid down in order to clear the way for some following demonstration; and prefixed either to theorems, in order to render their demonstration less perplexed and intricate; or to problems, to make their resolution more easy and short. Thus, to prove a pyramid one third of a prism, or parallelepiped, of the same base and height with it, the demonstration whereof in the ordinary way is difficult and troublesome; this lemma may be premised, which is proved in the rules of progression, that the sum of the series of the squares, in numbers in arithmetical progression, beginning from 0, and going on 1, 4, 9, 16, 25, 36, &c. is always subtriple of the sum of as many terms, each equal to the greatest; or is always one-third of the greatest term multiplied by the number of terms. Thus, to find the inflection of a curve line, this lemma is first premised, that a tangent may be drawn to the given curve in a given point.

So in physics, to the demonstration of most propositions, such lemmata as these are necessary first to be allowed: that there is no penetration of dimensions; that all matter is divisible; and the like. As also in the theory of medicine, that where the blood circulates, there is life, &c.

LEMNA, DUCK-MEAT, in botany; a genus of the diandria order, belonging to the monœcia class of plants; and in the natural method ranking under the 54th order, *Miscellanea*. The male calyx is monophyllous; there is no corolla; the female calyx monophyllous; there is no corolla, one style; the capsule unilocular. There are three species, all natives of Britain, growing frequently in ditches and the shallow parts of stagnant waters. All of them are acceptable food for ducks and geese.

LEMNIAN-EARTH, *Terra Lemnia*, a medicinal, astringent sort of earth, of a fatty consistence and reddish colour; used in the same cases as BOLE. It has its name from the island of Lemnos, whence it is chiefly brought. Many form it into round cakes, and impress a seal upon it; whence it is also called *terra sigillata*. A sort is said to be imported from Senegal, which is not properly an earth, though so called, but composed of the dried pulp of the fruit of the BAOBAB.

LEMNIUS (Lævinus), a famous physician, born at Zirc Zee in Zealand, in 1505. He practised physic with applause; and after his wife's death being made priest, became canon of Zirc-Zee, where he died in 1560. He left several esteemed works, the principal of which is intitled *De oculis nature miraculis*.

LEMNOS (anc. geog.), a noble island in the Ægean sea, near Thrace, called also *Dipolis*, from its consisting of two towns. The first inhabitants were the Pelasgi, or rather the Thracians, who were murdered by their wives. After them came the children of the Lemnian widows by the Argonauts, whose descendants were at last expelled by the Pelasgi, about 1100 years before the Christian era. Lemnos is about 112 miles in circumference according to Pliny; who says, that it is often

ten shadowed by mount Athos, though at the distance of 87 miles. It has been called *Hippipyle* from queen Hippipyle. It is famous for a certain kind of earth or chalk called *terra Lemnia*, or *terra sigillata* from the seal or impression which it can bear, and which is used for consolidating wounds. As the inhabitants were blacksmiths, the poets have taken occasion to fix the forges of Vulcan in that island, and to consecrate the whole country to his divinity. Lemnos is also celebrated for a labyrinth, which, according to some traditions, surpassed those of Crete and Egypt. Some remains of it were still visible in the age of Pliny. The island of Lemnos was reduced under the power of Athens by Miltiades.

LEMNOS, in botany. See CITRUS.

*LEMNOS-Island*, one of the Skellig-islands so called; situated off the coast of the county of Kerry, in the province of Munster in Ireland. It is rather a round rock, always above water, and therefore no way dangerous to ships. An incredible number of gannets and other birds breed here; and it is remarkable that the gannet nests no where on the southern coasts of Ireland but on this rock, though many of them are seen on all parts of our coasts on the wing. There is another rock on the northern coast of Ireland remarkable for the same circumstance.

LEMONADE, a liquor prepared of water, sugar, and lemon or citron juice; it is very cooling and grateful.

LEMOVICES, a people of Aquitania, situated between the Bituriges Cubi to the north, the Arverni to the east, the Cadureci to the south, and the Pictones to the west. Now the *Limousin* and *La Marche*.

LEMUR, the MAUCAUCO, in zoology, a genus of quadrupeds belonging to the order of primates, and the characters of which are these: There are four fore-teeth in the upper jaw, the intermediate ones being remote; and six long, compressed, parallel teeth in the under jaw; the dog-teeth are solitary, and the grinders are somewhat lobated.

1. The *tardigradus*, or tail-less maucauco, a small animal found in Bengal and the island of Ceylon. It is of a very singular construction, and perhaps longer in proportion to its thickness than any other quadruped. The head is roundish, with a sharp-pointed nose, and small ears: the body is covered with short, soft, and silky ash-coloured and reddish fur: the toes are naked, and the nails flat; excepting those of the inner toe on each hind foot, which are long, crooked, and sharp. The length of the animal from the nose to the rump is sixteen inches.—It lives in the woods, and feeds on fruits: In a tame state, it appears to be fond of eggs, and it would also greedily devour small birds. This animal has the inactivity of the sloth, and creeps slowly along the ground: it is very tenacious of its hold, and makes a plaintive noise.

A variety of the above, or according to Mr Pennant a distinct species, is,

2. The *loris* of Buffon, or *tardigradus* of Seba. It has a produced dog-like visage, with the forehead high above the nose: the ears are large, thin, and rounded: the body is slender and weak: limbs are very long and slender; and thumb on each foot is more distinct, and separate from the toes: the hair on the body is universally short, and delicately soft; the colour on the

upper part tawny, beneath whitish. In length, from the tip of the nose to the anus, the animal is only eight inches. It differs totally in form and in nature from the preceding: and notwithstanding the epithet of *tardigradus* or *sloth* given in Seba, it is very active, and ascends trees most nimbly. It has the actions of an ape; and, if we credit Seba, the male climbs the trees, and tastes the fruits before it presents them to its mate.

3. The mongooz, or woolly maucauco, inhabits Madagascar, and the islands to the eastward as far as Celebes. It is about the size of a cat, and has the whole upper part of the body covered with long, soft, and thick fur, a little curled or waved, of a deep brownish ash-colour; the tail is very long, covered with the same sort of hair, and of the same colour. It lives on fruits, turns its tail over its head to protect it from rain, and sleeps on trees; it is very sportive and good-natured, and very tender.

4. The catta, or ring-tailed maki, inhabits Madagascar and the neighbouring isles. It is of the size of a cat; has the hair on the top and hind-part of the head of a deep ash-colour, the back and sides reddish, the belly and insides of the limbs white; all its hair is very soft, close and fine, and erect like the pile of velvet; the tail is twice the length of the body. It is very good natured, and has all the life of a monkey, without its mischievous disposition; it is very cleanly, and has a weak cry. In a wild state they go in troops of 30 or 40, and are easily tamed when taken young.

5. The *caudatus-niger*, or ruffed maucauco, (the *Fari* of Buffon), is also an inhabitant of Madagascar. It is somewhat larger than the last, and has long hair standing out round the sides of the head like a ruff; a long tail; the colour of the whole animal generally black, but sometimes white spotted with black. In a wild state, it is very fierce; and makes such a violent noise in the woods, that the cries of two might be easily mistaken for the noise made by a hundred.

6. The *volans*, or flying maucauco, resembles a bat: being furnished with a strong membrane like that animal, by which it is enabled to fly. It inhabits the country about Guzarat, the Molucca isles, and the Philippines; feeds on the fruits of the trees, and is very distinct both from the bat and flying squirrel. Its history, however, is very little known.

7. The *tarfiv* of Buffon (ranked by Mr Pennant under this genus) has a pointed visage; slender nose, bilobated at the end: eyes large and prominent; ears erect, broad, naked, semitransparent, an inch and a half long, with a tuft of hairs between them on the top of the head, and long hairs on each side of the nose and on the upper eye-brow. In each jaw are two cutting and two canine teeth; which form an exception in this genus. There are four long slender toes and a distinct thumb on each foot; the thumbs on the hind feet very broad and greatly dilated at their ends: the tail is almost naked; the greater part round and scaly like that of a rat, but growing hairy towards the end, which is tufted. The penis is pendulous; and the scrotum and testicles are of a vast size in proportion to the animal. The length of the animal from nose to tail is near six inches; to the hind toes eleven and a half, the hind legs, like those of the jerboa, being of a great

Lemur.

Lemures  
||  
Lena.

Lena  
||  
Lenglet.

length; the tail is nine inches and a half long. It inhabits the remotest islands of India, especially Amboina; and is called by the Macassars *podje*.

8. The little maucauco has a rounded head, sharp nose, long whiskers; two canine teeth in each jaw; four cutting teeth in the upper jaw, six in the lower: seven grinders on each side; the nearest sharp, the more distant lobated: the ears are large, roundish, naked, and membranaceous; the eyes very large and full. The toes are long, and of unequal lengths; the ends round; the nails round, and very short; except that of the first toe, which is long and sharp: the tail is hairy, of the length of the body, and prehensile. The animal is rather less than the black rat; and, in Mr Pennant's opinion, seems to be the same which Buffon calls *le rat de Madagascar*. It is supposed to live in the palm-trees, and feed on fruits. It holds its food in its fore-feet like squirrels; is lively, and has a weak cry; and when it sleeps, it rolls itself up.

There are three or four other species; those above described are figured on Plate CCLXVIII.

LEMURES, in antiquity, sprites or hobgoblins; restless ghosts of departed persons, who return to terrify and torment the living.

These are the same with *larvæ*, which the ancients imagined to wander round the world, to frighten good people, and plague the bad. For which reason at Rome they had *lemuria* or feasts instituted to appease the manes of the defunct. See LARES.

Apuleius explains the ancient notion of manes thus: the souls of men released from the bands of the body, and freed from performing their bodily functions, become a kind of dæmons or genii, formerly called *lemures*. Of these *lemures*, those that were kind to their families were called *laræ familiares*; but those who, for their crimes, were condemned to wander continually, without meeting with any place of rest, and terrified good men, and hurt the bad, are vulgarly called *larvæ*.

An ancient commentator on Horace mentions, that the Romans wrote *lemures* for *remures*; which last word was formed from Remus, who was killed by his brother Romulus, and who returned to earth to torment him.

But Apuleius observes, that in the ancient Latin tongue *lemures* signifies the soul of a man separated from the body by death.

LEMURIA, or LEMURALIA, a feast solemnized at Rome on the 9th of May, to pacify the manes of the dead or in honour of the lemures.—It was instituted by Romulus, to appease the ghost of his murdered brother Remus, which he thought was continually pursuing him to revenge the horrid crime.—The name *lemuria* is therefore supposed to be a corruption of *Remuria*, i. e. the feast of Remus. Sacrifices continued for three nights, the temples were shut up, and marriages were prohibited during the solemnity. A variety of whimsical ceremonies were performed, magical words made use of, and the ghosts desired to withdraw, without endeavouring to hurt or affright their friends above ground. The chief formalities were ablation, putting black beans into their mouths, and beating kettles and pans, to make the goblins keep their distance.

LENA, a great river of Siberia in Asia, which

takes its rise in N. Lat. 52. 30. and E. Long. 124. 30. from Ferro. After traversing a large tract of land, it divides itself into five branches about Lat. 73°. Three of these run westward, and two eastward, by which it discharges itself into the icy Sea. Its three western mouths lie in 143° E. Long. from Ferro, but the eastern ones extend to 153. The current is every where slow, and its bed entirely free from rocks. The bottom is sandy, and the banks are in some places rocky and mountainous. Sixteen large rivers fall into the Lena during its course to the northern ocean.

LENÆA, a festival kept by the Greeks in honour of Bacchus, at which there was much feasting and Bacchanalian jollity, accompanied with poetical contentions, and the exhibition of tragedies. The poor goat was generally sacrificed on the occasion, and treated with various marks of cruelty and contempt, as being naturally fond of browsing on the vine-shoots.

LENFANT (James), a learned French writer born in 1661. After studying at Saumur, he went to Heidelberg, where he received imposition of hands for the ministry in 1684. He discharged the functions of this character with great reputation there, as chaplain of the electress dowager Palatine, and pastor in ordinary to the French church. The descent of the French into the Palatinate obliged our author to depart from Heidelberg in 1688. He went to Berlin, where the elector Frederic, afterward king of Prussia, appointed him one of the ministers. There he continued 39 years, distinguishing himself by his writings. He was preacher to the queen of Prussia, Charlotta Sophia; and after her death, to the late king of Prussia. In 1707 he took a journey to England and Holland, where he had the honour to preach before Queen Anne; and might have settled in London, with the title of *chaplain to her majesty*. In 1712 he went to Helmstadt, in 1715 to Leipsic, and in 1725 to Breslaw, to search for rare books and MSS. It is not certain whether it was he that first formed the design of the *Bibliothèque Germanique*, which began in 1720; or whether it was suggested to him by one of the society of learned men, which took the name of *Anonymous*, and who ordinarily met at his house. He died in 1728. His principal works are, 1. The History of the Council of Constance, 2 vols 4to. 2. A History of the Council of Pisa, 2 vols 4to. 3. The New Testament translated from the Greek into the French, with Notes by Beaufobre and Lenfant, 2 vols 4to. 4. The History of Pope Joan, from Spanheim's Latin dissertation. 5. Several pieces in the *Bibliothèque Choïsse, La Republic des Lettres, La Bibliothèque Germanique*, &c.

LENGLET (Nicholas du Fiefnoy, l'abbé), born at Beauvais in France, 1674, was a most fertile and useful French author on a variety of subjects, historical, geographical, political, and philosophical. The following deserve particular notice: 1. A Method of Studying History, with a Catalogue of the Principal Historians of every age and country, published in 1713; a work which established his reputation as an historical writer: it was translated into most of the modern languages, particularly our own, with considerable improvements, by Richard Rawlinson, LL.D. and F.R.S. and published at London in 1730, in 2 vols 8vo. 2. A Copious Abridgment of Universal History,

**History and Biography**, in chronological order, with the title of *Tablettes chronologiques*; which made its first appearance at Paris in 1744, in 2 vols small 8vo, and was universally admired by the literati in all parts of Europe. The author attended with great candour, as every writer ought, to well-founded judicious criticisms. In future editions he made several alterations and improvements, and from one of these, we believe that of 1759, an English translation was made, and published at London in 1762, in 2 vols large 8vo. Du Fresnoy died in 1755: the Paris edition of 1759 was printed from the author's corrected copy; and the impression being sold off, another edition appeared in 1763, with considerable improvements by an unknown editor: to the biographical part, a great number of names of respectable persons are added, not to be found in the former edition; and it has this superior advantage in the historical parts, that the general history is brought down to the year 1762. Du Fresnoy, however, has loaded his work with catalogues of saints, martyrs, councils, synods, heresies, schisms, and other ecclesiastical matters, fit only for the libraries of Popish convents and seminaries.

**LENGTH**, the extent of any thing material from end to end. In duration, it is applied to any space of time, whether long or short.

**LENGTHENING**, in ship-carpentry, the operation of cutting a ship down across the middle, and adding a certain portion to her length. It is performed by sawing her planks asunder in different places of her length, on each side of the midship frame, to prevent her from being too much weakened in one place. The two ends are then drawn apart to a limited distance; which must be equal to the proposed addition of length. An intermediate piece of timber is next added to the keel, upon which a sufficient number of timbers are erected, to fill up the vacancy produced by the separation. The two parts of the keelson are afterwards united by an additional piece which is secured down upon the floor-timbers, and as many beams as may be necessary are fixed across the ship in the new interval. Finally, the planks of the side are prolonged so as to unite with each other; and those of the ceiling refitted in the same manner; by which the whole process is completed.

**LENEICIA**, a strong town of Poland, and capital of a palatinate of the same name, with a fort seated on a rock. The nobility of the province hold their diet here. It stands in a morass on the banks of the river Bfura, in E. Long 19. 25. N. Lat 52. 12.

**LENOX or DUNBARTON Shire**, a county of Scotland, stretching 24 miles in length and 20 in breadth, is bounded on the south by the river and frith of Clyde, on the west by Lochlong and Argyleshire, on the north by the Grampian hills, and on the east by Monteith and Stirlingshire. Great part of this county consists of hills and heaths, fit for nothing but pasturage and sport; even in the lower lands, the soil is not extremely fertile: yet the face of the country is agreeably diversified with hill, dale, mountain, heath, streams, lakes, woods, and fields of corn: the shire is likewise beautified with a great number of agreeable seats and plantations, belonging to gentlemen of fortune. Part of this county is washed by the river Clyde in its course to the sea: even at the castle of Dunbar-

ton, the breadth of it amounts to two miles at high-water, and it continues extending in width and depth until it joins the ocean. From the mouth of the Clyde, the two bays of Lochlong and Lochfyn make large indentations in the shire of Dunbarton. The only river of any consideration that runs through this county, is the Leven, the Lelanonius of Ptolemy, otherwise called *Levinia*, the Latin name for Lenox. The river Leven is a pure transparent pastoral stream, that warbles over a bed of pebbles, through a delightful vale adorned with farms, seats, woods, and plantations. It derives its origin from the great lake called *Lochlomond*, of which indeed it is the overflowing, and, after a delightful meandering course of five or six miles, disembogues itself into the Clyde at the castle of Dunbarton. But the greatest curiosity of this county is Lochlomond itself, a vast body of fresh water, supplied by subterraneous springs and rivulets, surrounded with huge mountains, extending 25 miles in length, and in some places five miles in breadth, incredibly deep in every part, interspersed with 24 verdant isles, some of which are stocked with red deer, and inhabited. Nothing can be more wildly romantic than this part of the country during the summer-season, on the south side of the lake: the high road runs in some places through natural woods; overhung, on one hand, by steep mountains, covered with flowery heath; and on the other opening in long vistas upon the lake, terminated by green islands that seem to float upon the water. Among the rivers of this shire we shall likewise mention the water of Blane, which, though itself an inconsiderable stream, hath been rendered famous by the birth of George Buchanan, the celebrated Latin poet and historian. He was born on the north side of the lake, not far from the place called *Buchanan*, where we may behold an elegant seat belonging to the duke of Montrose, head of the noble family of Graham, so often distinguished by its loyalty, integrity, and valour. The same part of the country gave birth to the great mathematician and naturalist, Napier, Lord Merchiston, inventor of the logarithms. The title of *Lenox*, with the property of great part of the shire, was heretofore vested in a branch of the royal family of Stuart, with which it was reunited in the person of King James VI. whose father, Henry Lord Darnly, was son to the duke of Lenox. This prince conferred the title upon his kinsman Esme Stuart, son of John Lord d'Aubigny in France: but, his race failing at the death of Charles duke of Lenox and Richmond, and the estate devolving to the crown, King Charles II. conferred both titles on his own natural son by the duchess of Portsmouth; and they are still enjoyed by his posterity. The people of Lenoxshire are chiefly Lowlanders, though in some parts of it divine service is performed in the Erse language. The most numerous clans in this district, are the Macfarlanes, the Colquhouns, and the Buchanans. They generally profess the Protestant faith, according to the Presbyterian discipline; yet some of the gentlemen follow the English ritual. The commonalty are for the most part sober, honest, and industrious; and though they live poorly, are tall, vigorous, and healthy.

**LENS**, a piece of glass, or any other transparent substance, the surfaces of which are so formed, that

Lent  
||  
Len.

the rays of light, by passing through it, are made to change their direction, either tending to meet in a point beyond the lens, or made to become parallel after converging or diverging; or lastly, proceeding as if they had issued from a point before they fell upon the lens. Some lenses are convex, or thicker in the middle; some concave, or thinner in the middle; some plano-convex, or plano-concave; that is with one side flat, and the other convex or concave; and some are called *manifestes*, or convex on one side and concave on the other. See DIOPTRICS, p. 33

LENT, a solemn time of fasting in the Christian church, observed as a time of humiliation before Easter, the great festival of our Saviour's resurrection.

Those of the Romish church, and some of the Protestant communion, maintain, that it was always a fast of 40 days, and, as such, of apostolical institution. Others think it was only of ecclesiastical institution, and that it was variously observed in different churches, and grew by degrees from a fast of 40 hours to a fast of 40 days. This is the sentiment of Morton, Bishop Taylor, Du Moulin, Daillé, and others.

Anciently the manner of observing lent among those who were piously disposed, was to abstain from food till evening: their only refreshment was a supper; and then it was indifferent whether it was flesh or any other food, provided it was used with sobriety and moderation.

Lent was thought the proper time for exercising, more abundantly, every species of charity. Thus what they spared from their own bodies by abridging them of a meal, was usually given to the poor; they employed their vacant hours in visiting the sick and those that were in prison, in entertaining strangers, and reconciling differences. The imperial laws forbade all prosecution of men in criminal actions, that might bring them to corporal punishment and torture, during the whole season. This was a time of more than ordinary strictness and devotion, and therefore in many of the great churches they had religious assemblies for prayer and preaching every day. All public games and stage-plays were prohibited at this season; as also the celebration of all festivals, birth-days, and marriages, as unsuitable to the present occasion.

The Christians of the Greek church observe four lents: the first commences on the 15th of November; the second is the same with our lent; the third begins the week after Whitfuntide, and continues till the festival of St Peter and St Paul; and the fourth commences on the first of August, and lasts no longer than till the 15th. These lents are observed with great strictness and austerities; but on Saturdays and Sundays they indulge themselves in drinking wine and using oil, which are prohibited on other days.

LENTIL, in botany. See ERVUM.

LENTINI. See LEONTINI.

LENTISCUS, in botany. See PISTACIA.

LEO, in zoology. See FELIS.

LEO, in astronomy, the fifth of the 12 signs of the zodiac. The stars in the constellation *LEO*, in Ptolemy's catalogue are 27, besides the informes, which are 8; in Tycho's 30; in the Britannic catalogue 95.

LEO X. whose proper name was John de Medicis, is a pope ever to be remembered by Protestants, as having proved the cause of the reformation begun by Martin Luther. He had been honoured with a cardinal's hat at 14 years of age, and some years after with the dignity of legate by Julius II. He was in that quality in the army which was defeated by the French near Ravenna in 1512, where he was taken prisoner. The soldiers, who had overcome him, showed him such great veneration, that they humbly asked his pardon for gaining the victory, besought him to give them absolution for it, and promised never to bear arms against the pope. When Pope Julius died, Leo was very ill of the venereal disease at Florence, and was carried to Rome in a litter. His hurrying about every night to the cardinals of his faction, occasioned the breaking of his ulcer; and the matter which ran from it exhaled such a stench, that all the cells in the conclave, which were separated only by thin partitions, were poisoned by it. Upon this the cardinals consulted the physicians of the conclave, to know what the matter was. They, being bribed, said the cardinal de Medicis could not live a month; which sentence occasioned his being chosen pope. Thus cardinal de Medicis, then not 30 years of age, was elected pope upon a false information; and as joy is the most sovereign of all remedies, he soon after recovered his health, so that the old cardinals had reason to repent their credulity.—He was better calculated for a temporal prince, being ambitious, politic, luxurious, a connoisseur in the fine arts, and an accomplished fine gentleman: thus qualified, it is no wonder that so young a pontiff, neglecting the true interest of his church, should avail himself of the folly of religious dupes, and publicly sell indulgences to support his prodigality, especially as he was known to disbelieve Christianity itself, which he called *A very profitable fable for him and his predecessors*. In 1517, he published general indulgences throughout Europe (and ordered the priests to recommend them) in favour of those who would contribute any sum towards completing the church of St Peter; and this was the basis of the reformation. (See LUTHER and INDULGENCE.) Leo died in 1521.

It is but justice to add, that to this pope was principally owing the revival of polite literature in Italy. He spared neither pains nor expence in recovering ancient manuscripts, and procuring good editions of them; he favoured the arts and sciences; and gloried in being the patron of learned and ingenious men, who in return have been very lavish in his praise. Mr. Pope, in his essay on Criticism, bestows on him these harmonious lines.

But see! each muse in Leo's golden days,  
Starts from her trance; and trims her wither'd bays;  
Rome's ancient Genius, o'er its ruins spread,  
Shakes off the dust, and rears his rev'rend head.  
Then Sculpture and her sister Arts revive:  
Stones leap to form, and rocks begin to live;  
With sweeter notes each rising temple rung;  
A Raphael painted, and a Vida sung.

LEO (St), a small but strong town of Italy, in the territory of the church, and duchy of Urbino, with a bishop's see. It is seated on a mountain, near the river Marrechia, in E. Long, 12. 25. N. Lat. 43. 57.

LEOMINSTER, a town of Herefordshire, in England,

LEON.

England, seated on the river Lug, which waters the north and east sides of the town, and over which there are several bridges. It is a large, handsome, populous borough; and is a great thoroughfare betwixt South-Wales and London, from which last it is distant 113 measured miles. In King John's reign it was burnt, but soon rebuilt. It was incorporated by Queen Mary, and is governed by a high steward, bailiff, recorder, 12 capital burgeses (out of whom the bailiff is chosen), and a town clerk. Its market is on Friday, and its fairs, which are all noted for horses and black cattle, on February 13th, Tuesday after Midlent-Sunday, May 13th, July 10th, September 4th, and November 1st. The market was on Thursday till it was changed, on a petition from the cities of Hereford and Worcester, complaining of their loss of trade; since which, the vast trade it had in wool and wheat is much lessened. The best flax is said to grow here, and it has been equally noted for the best wheat, barley, and the finest bread. The inhabitants drive a considerable trade not only in the wool, but in gloves, leather, hat-making, &c. and there are several rivers in and about the town on which they have mills and other machines. Near its church are some remains of its priory; and on a neighbouring hill are the ruins of a palace, called to this day Comfort-Castle. It has several good inns, and sends two members to parliament, W. Long. 2. 45. N. Lat. 52. 20.

LEON, an ancient town of France, in Lower Bretagne, and capital of the Lyonnais, with a bishop's see. It is seated near the sea, in W. Long. 3. 55. N. Lat. 48. 41.

LEON, a province of Spain, with the title of a kingdom; bounded on the north by Asturias; on the west by Galicia and Portugal; and on the south by Estramadura and Castile, which also bounds it on the east. It is about 125 miles in length, and 100 in breadth; and is divided into two almost equal parts by the river Duero, or Douro. It produces all the necessaries of life, and Leon is the capital town.

LEON, an ancient and large episcopal town of Spain, and capital of the kingdom of that name, built by the Romans in the time of Galba. It has the finest cathedral church in all Spain. It was formerly more rich and populous than at present, and had the honour of being the capital of the first Christian kingdom in Spain. It is seated between two sources of the river Ebra, in W. Long. 5. 13. N. Lat. 42. 55.

LEON (Peter Cieca de), author of the history of Peru. He left Spain his native country at 13 years of age, in order to go into America, where he resided 17 years; and observed so many remarkable things, that he resolved to commit them to writing. The first part of his history was printed at Seville in 1553. He began it in 1541, and ended it in 1550. He was at Lima, the capital of the kingdom of Peru, when he gave the finishing stroke to it, and was then 32 years of age.

LEON de Nicaragua, a town of North America, in New Spain, and in the province of Nicaragua; the residence of the governor, and a bishop's see. It consists of about 1000 houses, and has several monasteries and nunneries belonging to it. At one end of the town is a lake which ebbs and flows like the sea. The town is seated at the foot of a volcano, which ren-

ders it subject to earthquakes. It was taken by the buccaniers in 1685, in sight of a Spanish army who were six to one. W. Long. 86. 10. N. Lat. 12. 25.

Leonard  
||  
Leontice.

LEONARD DE NOBLET (St.) an ancient town of France, in the province of Guienne and territory of Limousin, with a considerable manufactory of cloth and paper. It is seated on the river Vienne, in E. Long. 1. 35. N. Lat. 45. 50.

LEONARDO DA VINCI. See VINCI.

LEONCLAVIUS (John), one of the most learned men of the 16th century, was a native of Weillphalia. He travelled into Turkey, and collected excellent materials for composing *The Ottoman History*; and it is to him the public is indebted for the best account we have of that empire. To his knowledge in the learned languages, he had added that of the civil law; whereby he was very well qualified to translate the *Basilica*. His other versions were esteemed, though critics pretend to have found many faults in them. He died in 1593, aged 60.

LEONIDAS I. king of Sparta, a renowned warrior, slain in defending the straits of Thermopylæ against Xerxes, 480 B. C. See SPARTA.

LEONINE, in poetry, is applied to a kind of verses which rhyme at every hemistich, the middle always chiming to the end. Of which kind we find several ancient hymns, epigrams, prophecies, &c.—For instance, Muretus speaking of the poetry of Lorenzo Gambara of Bresse, says,

*Brixia, vestrae merdosa volumina vatis,  
Non sunt nostrates tergere digna rates.*

The following one is from the school of Salernum:

*Ut vites penam de potibus incipe exnam.*

The origin of the word is somewhat obscure: Pasquier derives it from one Leoninus or Leonius, who excelled in this way; and dedicated several pieces to Pope Alexander III.; others derive it from Pope Leo; and others from the beast called *lion*, by reason it is the loftiest of all verses.

LEONTICA, feasts or sacrifices celebrated among the ancients in honour of the sun.—They were called *Leontica*, and the priests who officiated at them *Leones*, because they represented the sun under the figure of a lion radiant, bearing a tiara, and gripping in his two fore paws the horns of a bull, who struggled with him in vain to disengage himself.

The critics are extremely divided about this feast. Some will have it anniversary, and to have made its return not in a solar but in a lunar year; but others hold its return more frequent, and give instances where the period was not above two hundred and twenty days.

The ceremony was sometimes also called *Mithriaca*; Mithras being the name of the sun among the ancient Persians. There was always a man sacrificed at these feasts, till the time of Hadrian, who prohibited it by a law. Commodus introduced the custom afresh, after whose time it was again exploded.

LEONTICE, LION'S LEAF: A genus of the monogynia order, belonging to the hexandria class of plants; and in the natural method ranking under the 24th order, *Corydalis*. The corolla is hexapetalous; the nectarium hexaphyllous, standing on the heels of the corolla, with its limb patent; the calyx hexaphyl-

Leontini  
||  
Leonurus.

lions, and deciduous. There are four species, natives of the southern parts of Europe, two of which are sometimes cultivated in this country. These are, 1. The chrysozoum with winged leaves; and, 2. The leontopetalum with decomposed leaves. Both these plants are natives of the Archipelago islands, and also grow in the corn-fields about Aleppo in Syria, where they flower soon after Christmas. They have large tuberous roots like those of the cyclamen, covered with a dark-brown bark. The flowers sit upon naked footstalks: those of the first sort sustain many yellow flowers, but the flowers of the second are of a paler colour. Both species are propagated by seeds, which must be sown soon after they are ripe, otherwise they seldom succeed. When sent to distant countries, they must be preserved in sand. The plants are, however, very difficult to be preserved in this country: for they will not thrive in pots; and when they are planted in the full ground, frost frequently destroys them. The best way is to sow the seed as soon as it comes from abroad, covering it with glasses in the winter to protect it from frost; and, in the spring, when the plants begin to appear, they must have free air admitted to them at all times when the weather is mild, otherwise they will be weak.

LEONTINI, or LEONTIUM (anc. geog.), a town of Sicily on the south side of the river Terias, 20 miles north-west of Syracuse. The territory, called *Campi Leontini*, was extremely fertile (Cicero); these were the *Campi Lastrigoni*, anciently so called; the seat of the *Læstrigons*, according to the commentators on the poets. The name *Leontini* is from *Leo*, the impession on their coin being a lion. Now called *Lentini*, a town situated in the Val di Noto, in the south-east of Sicily.

LEONTIUM, one of the twelve towns of Achaia, whether on, or more distant from, the bay of Corinth, is uncertain. *Leontium* of Sicily. See LEONTINI.

LEONFODON, DANDELION: A genus of the polygamia æqualis order, belonging to the syngenesia class of plants; and in the natural method ranking under the 49th order, *Compositæ*. The receptacle is naked; the calyx imbricated, with the scales somewhat loose; the pappus feathery. There are nine species, of which the only remarkable one is the Taraxacum, or common dandelion, found on the road sides, in pastures, and on the banks of ditches. Early in the spring, the leaves whilst yet white and hardly unfolded are an excellent ingredient in salads. The French eat the roots and tender leaves with bread and butter. Children that eat it in the evening experience its diuretic effects in the night, which is the reason that other European nations as well as ourselves vulgarly call it *piss-a-bed*. When a swarm of locusts had destroyed the harvest in the island of Minorea, many of the inhabitants subsisted upon this plant. The expressed juice has been given to the quantity of four ounces three or four times a day; and Boerhaave had a great opinion of the utility of this and other lactescent plants in visceral obstructions. Goats eat it; swine devour it greedily; sheep and cows are not fond of it, and horses refuse it. Small birds are fond of the seeds.

LEONURUS, LION'S-TAIL: A genus of the gymnospermia order, belonging to the didymania class of plants; and in the natural method ranking under the

42d order, *Verticillatæ*. The antheræ are powdered with shining points, or small elevated globular particles.

Leonurus  
||  
Lepanto.

*Species*. 1. The Africana, with spear-shaped leaves, is a native of Ethiopia. It rises with a shrubby stalk seven or eight feet high, sending out several four-cornered branches, garnished with oblong narrow leaves, acutely indented on their edges, hairy on their upper side, and veined on the under side, standing opposite. The flowers are produced in whorls, each of the branches having two or three of these whorls towards their ends. They are of the lip kind, shaped somewhat like those of the dead nettle; but are much longer, and covered with short hairs. They are of a golden scarlet colour, so make a fine appearance. The flowers commonly appear in October and November, and sometimes continue till the middle of December, but are not succeeded by seeds in this country. There is a variety with variegated leaves which is admired by some, but the whorls of flowers are smaller than those of the plain sort. 2. The nepetæfolia, with oval leaves, is a native of the Cape of Good Hope. This rises with a square shrubby stalk about three feet high, sending out several four-cornered branches, garnished with oval crenated leaves, rough on their under side like the dead-nettle, but veined on the upper side, and placed opposite. The flowers come out in whorls like those of the former sort, but are not so long nor so deep coloured. They appear at the same season with the first, and continue as long in beauty. There are three other species, but the above are the most remarkable.

*Culture*. Both sorts are propagated by cuttings, which should be exposed to the air long enough to harden the shoots, and planted in the beginning of July, after which they will take root very freely. They should be planted in a loamy border to an eastern aspect; and if they are covered closely with a bell or hand-glass to exclude the air, and shaded from the sun, it will forward their putting forth roots. As soon as they have taken good root, they should be taken up and planted each in a separate pot filled with soft loamy earth, and placed in the shade till they have taken new root. In October they must be removed into the green-house.

LEOPARD. See FELIS.

LEOPARD'S BANE, in botany. See DORONICUM.

LEPANTO, a strong and very considerable town of Turkey in Europe, and in Livadia, with an archbishop's see and a strong fort. It is built on the top of a mountain, in form of a sugar-loaf; and is divided into four towns, each surrounded by walls, and commanded by a castle on the top of the mountain. The harbour is very small, and may be shut up by a chain, the entrance being but 50 feet wide. It was taken from the Turks by the Venetians in 1687; but was afterwards evacuated, and the castle demolished in 1699, in consequence of the treaty of Carlowitz. It was near this town that Don John of Austria obtained the famous victory over the Turkish fleet in 1571. The produce of the adjacent country is wine, oil, corn, and rice. Turkey leather is also manufactured here. The wine would be exceedingly good if they did not pitch their vessels on the inside, but this renders the taste very disagreeable to those who are not accustomed

Lepus  
||  
Lepium.

stomed to it. The Turks have six or seven mosques here, and the Greeks two churches. It is seated on a gulph of the same name, in E. Long. 22. 13. N. Lat. 38. 34.

**LEPAS**, the **ACORN**, in zoology; a genus belonging to the order of vermes testacea. The animal is the triton; the shell is multivalve, unequal, fixed by a stem or sessile. There are several species, of which the most remarkable is the anatifera, consisting of five shells depressed, affixed to a pedicle and in clusters. It adheres to the bottom of ships by its pedicles. The tentacula from its animal are feathered; and have given the old English historians and naturalists the idea of a bird. They ascribed the origin of the barnacle goose to those shells. See Plate CCLXIII.

**LEPIDIDIUM**, **DITTANDER**, or *Pepperwort*: A genus of the siliculosæ order, belonging to the tetradynamia class of plants; and in the natural method ranking under the 39th order, *Siliquosæ*. The silicula is emarginated, cordated, and polysperous, with the valves carinated contrary or broader than the partition. There are 19 species, of which the only remarkable one is the latifolium or common dittander. This is a native of many parts both of Scotland and England. It hath small, white, creeping roots, by which it multiplies very fast, and is difficult to be eradicated after it has long grown in any place. The stalks are smooth, rise two feet high, and send out many side-branches. The flowers grow in close bunches towards the top of the branches, coming out from the side; they are small, and composed of four small white petals. The seeds ripen in autumn. The whole plant has a hot biting taste like pepper; and the leaves have been often used by the country people to give a relish to their viands instead of that spice, whence the plant has got the appellation of *poor man's pepper*. It is reckoned an antiscorbutic, and was formerly used instead of the *horjse radish* *survy-grass*.

**LEPIDOPTERA**, in zoology, an order of insects, with four wings, which are covered with imbricated squamule. See **ZOOLOGY**.

**LEPISMA**, in zoology; a genus of apterous insects, the characters of which are: They have six feet formed for running; the mouth is furnished with four palpi, two of which are cæteaceous and two capitated; the tail is terminated by extended bristles, and the body imbricated with scales. There are 7 species. The *faccharina* (Plate CCLXXIV.) is an American species, so called because mostly found among sugar; but now common in Europe. It is of a leaden colour, but rather inclining to that of silver, by reason of the small silvery scales with which it is covered; by which same circumstance it resembles, especially in its under part, the silver fish. It is found in gardens, under boxes, and in the crevices of window-sashes in houses, where it is very common. It runs with great swiftness, and is difficult to catch. When touched, it loses part of its scales, and its softness makes it easy to crush.

**LEPIUM**, in natural history, a genus of fossils of the harder gypsum, composed of very small particles, and of a less glittering hue.

There is only one species of this genus, being one of the least valuable and most impure of the class of gypsums. It is of an extremely rude, irregular, coarse, and unequal structure; a little soft to the touch, of a

very dull appearance, and of different degrees of a greyish white. It is burnt in plaster for the coarser works; it calcines very slowly and unequally, and makes but a very coarse and ordinary plaster.

Leprosy  
||  
Lepus.

**LEPROSY**, a foul cutaneous disease, appearing in dry, white, thin, scurfy scabs, either on the whole body, or only some part of it, and usually attended with a violent itching and other pains. See (the *Index* subjoined to) **MEDICINE**.

The leprosy is of various kinds, but the Jews were particularly subject to that called *Elephantiasis*. Hence the Jewish law excluded lepers from communion with mankind, banishing them into the country or uninhabited places, without excepting even kings. When a leper was cleansed, he came to the city gate, and was there examined by the priests; after this he took two live birds to the temple, and fastened one of them to a wisp of cedar and hyssop tied together with a scarlet ribbon; the second bird was killed by the leper, and the blood of it received into a vessel of water; with this water the priest sprinkled the leper, dipping the wisp and the live bird into it: this done, the live bird was let go; and the leper, having undergone this ceremony, was again admitted into society and to the use of things sacred. See Levit. xiii. 46. 47. and Levit. xiv. 1. 2. &c.

**LEPTODECORHOMBES**, in natural history, a genus of fossils of the order of the selenitæ; consisting of 10 planes, each so nearly equal to that opposite to it as very much to approach to a decahedral parallelepiped, though never truly or regularly so.

Of this genus there are only five known species, 1. A thin, fine, pellucid, and slender streaked one, with transverse striæ, found in considerable quantities in the strata of clay in most parts of England, particularly near Heddington in Oxfordshire. 2. A thin, dull-looking, opaque, and slender streaked one, more scarce than the former, and found principally in Leicestershire and Staffordshire. 3. A thin fine streaked one, with longitudinal striæ, found in the clay pits at Richmond, and generally lying at great depths. This has often on its top and bottom a very elegant smaller rhomboide, described by four regular lines. 4. A rough kind, with thick transverse striæ, and a scabrous surface, very common in Leicestershire and Yorkshire. And, 5. A very short kind, with thick plates, common in the clay-pits of Northamptonshire and Yorkshire.

**LEPTOPOLYGLINGLIMI**, in natural history, a genus of fossil shells, distinguished by a number of minute teeth at the cardo; whereof we find great numbers at Harwich-cliff, and in the marle-pits of Suffex.

**LEPTUM**, in antiquity, a small piece of money, which, according to some, was only the eighth part of an obolus; but others will have it to be a silver or brass drachm.

**LEPTURA**, in zoology, a genus of insects belonging to the order of coleoptera, the characters of which are these:—The feelers are brittle; the elytra are attenuated towards the apex: and the thorax is somewhat cylindrical. There are 25 species, principally distinguished by their colour.

**LEPUS**, in zoology, a genus of quadrupeds belonging to the order of glires. The characters are. these:

Lepus.

these:—They have two fore-teeth in each jaw; those in the upper-jaw are double, the interior ones being smallest.

1. The timidus, or common hare, has a short tail; the points of the ears are black; the upper-lip is divided up to the nostrils; the length of the body is generally about a foot and a half; and the colour of the hair is reddish, interspersed with white. The hare is naturally a timid animal. He sleeps in his form or feat during the day; and feeds, copulates, &c. in the night. In a moon-light evening, a number of them are sometimes seen sporting together, leaping and pursuing each other: But the least motion, the falling of a leaf, alarms them; and then they all run off separately, each taking a different route. They are extremely swift in their motion, which is a kind of gallop, or a succession of quick leaps. When pursued, they always take to the higher grounds: as their fore-feet are much shorter than the hind ones, they run with more ease up-hill than down-hill. The hare is endowed with all those instincts which are necessary for his own preservation. In winter he chooses a form exposed to the south, and in summer to the north. He conceals himself among vegetables of the same colour with himself. Mr Fouilloux says, that he observed a hare, as soon as he heard the sound of the horn, or the noise of the dogs, although at a mile's distance, rise from her feat, swim across a rivulet, then lie down among the bushes, and by this means evade the scent of the dogs. After being chased for a couple of hours, a hare will sometimes push another from his form, and lie down in it himself. When hard pressed, the hare will mingle with a flock of sheep, run up an old wall and conceal himself among the grass on the top of it, or cross a river several times at small distances. He never runs against the wind, or straight forward; but constantly doubles about, in order to make the dogs lose their scent.

It is remarkable that the hare, although ever so frequently pursued by the dogs, seldom leaves the place where she was brought forth, or even the form in which she usually sits. It is common to find them in the same place next day, after being long and keenly chased the day before. The females are more gross than the males, and have less strength and agility; they are likewise more timid, and never allow the dogs to approach so near their form before rising as the males. They likewise practise more arts, and double more frequently than the males.

The hare is diffused almost over every climate; and, notwithstanding they are every where hunted, their species never diminishes. They are in a condition of propagating the first year of their lives; the females go with young about 30 days, and produce four or five at a time; and as soon as they have brought forth, they again admit the embraces of the male; so that they may be said to be always pregnant. The eyes of the young are open at birth; the mother suckles them about 20 days, after which they separate from her, and procure their own food. The young never go far from the place where they were brought forth; but still they live solitary, and make forms about 30 paces distant from each other: Thus, if a young hare be found any-where, you may almost be certain of finding several others within a very small distance. The

N<sup>o</sup> 180.

Lepus.

hare is not so savage as his manners would indicate. He is gentle, and is susceptible of a kind of education. He is pretty easily tamed, and will even show a kind of attachment to the people of the house: But still this attachment is not so strong or lasting as to engage him to become altogether domestic; for although taken when very young, and brought up in the house, he no sooner arrives at a certain age, than he takes the first opportunity of recovering his liberty, and flying to the fields. The hare lives about seven or eight years. He feeds upon grass and other vegetables. His flesh is excellent food.

Hares are very subject to fleas. Linnæus tells us, that the Dalecarlians make a sort of cloth, called *felt*, of the fur; which, by attracting these insects, preserves the wearer from their troublesome attacks. The hair of this creature makes a great article in the hat-manufacture; and, as our country cannot supply a sufficient quantity, a great deal is annually imported from Russia and Siberia. The hare was reckoned a great delicacy among the Roman; the Britons, on the contrary, thought it impious even to taste it: yet this animal was cultivated by them, either for the pleasure of the chase, or for the purposes of superstition; as we are informed, that Boadicea, immediately before her last conflict with the Romans, let loose a hare she had concealed in her bosom, which taking what was deemed a fortunate course, animated her soldiers by the omen of an easy victory over a timid enemy.

2. The variabilis, or varying hare of Pallas, has soft hair, which in summer is grey, with a slight mixture of black and tawny: the ears are shorter, and the legs more slender, than those of the common hare: the tail is entirely white, even in summer; and the feet are molt closely and warmly furred. In winter, the whole animal changes to a snowy whiteness, except the tips and edges of the ears, which remain black, as are the soles of the feet, on which, in Siberia, the fur is doubly thick, and of a yellow colour. It is less than the common species.—These animals inhabit the highest Scottish Alps, Norway, Lapland, Russia, Siberia, Kamtschatka, and the banks of the Wolga, and Hudson's Bay. In Scotland, they keep on the tops of the highest hills, and never descend into the vales; nor do they ever mix with the common hare, though these abound in this neighbourhood. They do not run fast; and are apt to take shelter in clefts of rocks. They are easily tamed, and are full of frolic. They are fond of honey and carraway comfits; and they are observed to eat their own dung before a storm. This species changes its colour in September; resumes its grey coat in April; and in the extreme cold of Greenland only is always white. Both kinds of hares are common in Siberia, on the banks of the Wolga, and in the Oreaburg government. The one never changes colour: the other, native of the same place, constantly assumes the whiteness of the snow during winter. This it does, not only in the open air and in a state of liberty, but, as experiment has proved, even when kept tame, and preserved in houses in the stove-warmed apartments, in which it experiences the same changes of colour as if it had dwelt on the snowy plains.—They collect together, and are seen in troops of five or six hundred, migrating in spring, and returning in autumn. They are compelled to this by the want of subsistence, quitting

quitting in the winter the lofty hills, the southern boundaries of Siberia, and seek the plains and northern wooded parts, where vegetables abound; and towards spring seek again the mountainous quarters.

Mr Muller says, he once saw two black hares, in Siberia, of a wonderful fine gloss, and of as full a black as jet. Near Casan was taken another, in the middle of the winter 1768. These specimens were much larger than the common kind.

In the southern and western provinces of Russia is a mixed breed of hares, between this and the common species. It sustains, during winter only, a partial loss of colour: the sides, and more exposed parts of the ears and legs, in that season becoming white; the other parts retaining their colours. This variety is unknown beyond the Urallian chain. It is called by the Russians *ruffack*; they take them in great numbers in snares, and export their skins to England and other places for the manufacture of hats. The Russians and Tartars, like the Britons of old, hold the flesh of hares in detestation, esteeming it impure: that of the variable, in its white state, is excessively insipid.

There have been several instances of what may be called monsters in this species, horned hares, having excrescences growing out of their heads, like to the horns of the roe-buck. Such are those figured in Gesner's history of quadrupeds, p. 634; in the *Museum Regium Hafniae*, n<sup>o</sup> 48. tab. iv; and in Klein's history of quadrupeds, 32. tab. iii.; and again described in Wormius's museum, p. 321, and in Grew's museum of the Royal Society. These instances have occurred in Saxony, in Denmark, and near Astracan,

3. The Americanus, American hare, or hedge-coney, has the ears tipped with grey: the upper part of the tail is black, the lower white: the neck and body are mixed with cinereous, rust-colour, and black; the legs are of a pale ferruginous colour; and the belly is white: the fore-legs are shorter, and the hind legs longer, in proportion, than those of the common hare. In length it is 18 inches; and weighs from 3 to 4½ pounds.—This species inhabits all parts of North America. In New Jersey, and the colonies south of that province, it retains its colour the whole year. In New England, Canada, and about Hudson's Bay, at the approach of winter, it changes its short summer's fur for one very long, silky, and silvery, even to the roots of the hairs; the edges of the ears only preserving their colour. At that time these hares are in the highest season for the table; and are of vast use to those who winter in Hudson's Bay, where they are taken in great abundance in springs made of brass-wire, to which they are led by a hedge made for that purpose, with holes left before the snares for the animals to pass through.—They breed once or twice a-year, and have from five to seven at a time. They do not migrate, like the preceding; but always haunt the same places: neither do they burrow; but lodge under fallen timber, and in hollow trees. They breed in the grass; but in spring shelter their young in the trees, to which they also run when pursued; from which, in the southern colonies, the hunters force them by means of a hooked stick, or by making a fire, and driving them out by the smoke.

4. The *tolai*, or Baikal hare, has a tail longer than that of a rabbit; and the ears are longer in the male

in proportion than those of the varying hare: the fur is of the colour of the common hare; and the size between that of the common and the varying hare. It inhabits the country beyond lake Baikal, and extends through the great Gobece even to Thibet. The Tanguts call it *Rangwo*, and consecrate it among the spots of the moon. The Mongols call it *Tolai*. It agrees with the common rabbit in colour of the flesh; but does not burrow, running instantly (without taking a ring as the common hare does) for shelter, when pursued, into holes of rocks. The fur is bad, and of no use in commerce.

5. The *Capensis*, or Cape hare, has long ears dilated in the middle; the outides naked, and of rose colour, the inside and edges covered with short grey hairs: the crown and back are of a dusky colour mixed with tawny; the checks and sides cinereous; the breast, belly, and legs, rust-coloured: the tail is bushy, carried upwards; and of a pale ferruginous colour. The animal is about the size of a rabbit. It inhabits the country three days north of the Cape of Good Hope; where it is called the *mountain hare*, for it lives only in the rocky mountains, and does not burrow. It is difficult to shoot it, as it instantly, on the sight of any one, runs into the fissures of the rocks.

Allied to this, in Mr Pennant's opinion, seems the *viscachos*, or *viscachas*, mentioned by Acosta and Feuillée, in their accounts of Peru: they compare them to hares or rabbits. The last says, they inhabit the colder parts of the country. Their hair is very soft, and of a mouse-colour; the tail is pretty long, and turns up; and the ears and whiskers are like those of the common rabbit. In the time of the Incas, the hair was spun, and wove into cloth, which was so fine as to be used only by the nobility.

6. The *cusculus*, or rabbit, has a very short tail, and naked ears. The colour of the fur, in a wild state, is brown; the tail black above, white beneath: in a tame state the general colour varies to black, pied, and quite white; and the eyes are of a fine red. The native country of this species is Spain, where they were formerly taken with ferrets, as is practised in this country at present. They love a temperate and warm climate, and are incapable of bearing great cold; so that in Sweden they are obliged to be kept in houses. They abound in Britain. Their furs make a considerable article in the hat manufactories; and of late such part of the fur as is unfit for that purpose, has been found as good as feathers for stuffing beds and bolsters. Numbers of the skins are annually exported into China. The English counties most noted for rabbits are Lincolnshire, Norfolk, and Cambridgeshire. Methold, in the last county, is famous for the best kind for the table: the soil there is sandy, and full of mosses and the *carex* grass. Rabbits swarm in the isles of Orkney, where their skins form a considerable article of commerce. The rabbits of those isles are in general grey; those which inhabit the hills grow hoary in winter.

The variety called the *silver haired* rabbit was formerly in great esteem for lining of clothes, and their skins were sold for 3s. a-piece; but since the introduction of more elegant furs, their price has fallen to 6d. The Sunk Island in the Fumber was once famous for a moult-coloured sort, which has since been extirpated

Lepus.

Lepus.

by reason of the injury they did to the banks by burrowing.—Other varieties are,

The *Angora* rabbit, with hair long, waved, and of a silky fineness, like that of the goat of Angora;—and the *Hooded Rabbit*, described by Edwards as having a double skin over the back into which it can withdraw its head, and another under the throat in which it can place its forefeet: it has small holes in the loose skin on the back, to admit light to the eyes. The colour of the body is cinereous; of the head and ears, brown.

The fecundity of the rabbit is still greater than that of the hare. They will breed seven times in the year, and the female sometimes brings eight young ones at a time. Supposing this to happen regularly for four years, the number of rabbits from a single pair will amount to 1,274,840. By this account we might justly apprehend being overstocked with these animals: but a great number of enemies prevents their increase; not only men, but hawks and beasts of prey making dreadful havoc among them. Notwithstanding all these different enemies, however, we are told by Pliny and Strabo, that they once proved such a nuisance to the inhabitants of the Balearic islands, that they were obliged to implore the assistance of a military force from Augustus in order to exterminate them. They devour herbage of all kinds, roots, grain, fruits, &c. They are in a condition for generating at the end of six months; and, like the hare, the female is almost constantly in season; she goes with young about 30 days, and brings forth from four to eight at a litter. A few days before littering, she digs a hole in the earth, not in a straight line, but in a zig-zag form: the bottom of this hole she enlarges every way, and then pulls off a great quantity of hair from her belly, of which she makes a kind of bed for her young. During the two first days after birth, she never leaves them, but when pressed with hunger, and then she eats quickly and returns: and in this manner she suckles and attends her young for six weeks. All this time both the hole and the young are concealed from the male; sometimes, when the female goes out, she, in order to deceive the male, fills up the mouth of the hole with earth mixed with her own urine. But when the young ones begin to come to the mouth of the hole, and to eat such herbs as the mother brings to them, the father seems to know them: he takes them betwixt his paws, smooths their hair, and caresses them with great fondness.

The following species are without tails.

7. The *Alpinus*, or *Alpine* rabbit, has short, broad, rounded ears; a long head, and very long whiskers, with two very long hairs above each eye: the colour of the fur at the bottom is dusky, towards the ends of a bright ferruginous colour; the tips white, and intermixed are several long dusky hairs, though on first inspection the whole seems of a bright bay. The length of the animal is nine inches. This species is first seen on the Altaic chain; extends to lake Baikal; from thence to Kamtschatka; and, as is said, found in the new-discovered Fox or Aleutian islands. They inhabit always the middle region of the snowy mountains, in the rudest places, wooded and abounding with herbs and moisture. They sometimes form burrows between the rocks, and oftener lodge in the crevices. They are generally found in pairs; but in cloudy weather they collect together, and lie on the rocks, and give a keen

whistle, so like that of a sparrow, as to deceive the hearer. On the report of a gun, they run into their holes; but soon come out again, supposing it to be a clap of thunder, to which they are so much used in their lofty habitations. By wonderful instinct they make a provision against the rigorous season in their inclement seats. A company of them, towards autumn, collect together vast heaps of choice herbs and grasses, nicely dried, which they place either beneath the over-hanging rocks, or between the chafins, or round the trunk of some tree. The way to these heaps is marked by a worn path. In many places the herbs appeared scattered, as if to be dried in the sun and harvested properly. The heaps are formed like round or conoid ricks; and are of various sizes, according to the number of the society employed in forming them. They are sometimes of a man's height, and many feet in diameter, but usually about three feet. Without this provision of winter's stock they must perish, being prevented by the depth of snow from quitting their retreats in quest of food. They select the best of vegetables, and crop them when in the fullest vigour, which they make into the best and greenest hay by the judicious manner in which they dry it. These ricks are the origin of fertility amidst the rocks; for the reliques, mixed with the dung of the animals, rot in the barren chafins, and create a soil productive of vegetables. These ricks are also of great service to those people who devote themselves to the laborious employment of sable-hunting: for being obliged to go far from home, their horses would often perish for want if they had not the provision of these little industrious animals to support them; which is easily to be discovered by their height and form, even when covered with snow. It is for this reason that this little creature has a name among every Siberian and Tartarian nation, which otherwise would have been overlooked and despised. The people of Jakutz are said to feed both their horses and cattle with the reliques of the winter stock of these hares. These animals are neglected as a food by mankind; but are the prey of fables and the Siberian weasel, which are joint inhabitants of the mountains. They are likewise greatly infested by a sort of gadfly, which lodges its egg in their skin in August and September, which often proves destructive to them.

8. The *ogotona* has oblong oval ears, a little pointed; with shorter whiskers than the former, and hairs long and smooth: the colour of those on the body is brown at the roots, light grey in the middle, and white at the ends intermixed with a very few dusky hairs: there is a yellowish spot on the nose, and space about the rump of the same colour: the outside of the limbs are yellowish; the belly is white. The length is about six inches; weight of the male, from  $6\frac{1}{2}$  to  $7\frac{1}{2}$  ounces; of the female, from 4 to  $4\frac{1}{2}$ . This species inhabits only the country beyond lake Baikal, and from thence is common in all parts of the Mongolian desert, and the vast desert of Gobeè, which extends on the back of China and Thibet, even to India. It frequents the open valleys and gravelly or rocky naked mountains. These little creatures are called by the Mongols *Ogotona*; and are found in vast abundance. They live under heaps of stones; or burrow in the sandy soil, leaving two or three entrances, which all run obliquely. They make a nest of soft grass; and the old females make for security a number of burrows near each other, that they may

may if disturbed retreat from one to the other. They wander out chiefly in the night. Their voice is excessively shrill, and emits a note like that of a sparrow, twice or thrice repeated, but very easily to be distinguished from that of the Alpine rabbit. They live principally on the tender bark of a sort of service and the dwarf-elm; in the spring, on different herbs. Before the approach of severe cold, in the early spring, they collect great quantities of herbs, and fill their holes with them, which the inhabitants of the country consider as a sure sign of change of weather. Directed by the same instinct with the former species, they form in autumn their ricks of hay of a hemispherical shape, about a foot high and wide: in the spring these elegant heaps disappear, and nothing but the relicts are seen. They copulate in the spring, and about the latter end of June their young are observed to be full grown. They are the prey of hawks, magpies, and owls: but the cat *Manul*† makes the greatest havoc among them; and the ermine and sitchet are equally their enemy.

† See *Felis*.

9 The pusillus, or calling rabbit, with a long head thickly covered with fur even to the tip of the nose; numerous hairs in the whiskers; ears large and rounded; legs very short, and the soles furred beneath: its whole coat is very soft, long, and smooth, with a thick, long, fine down beneath, of a brownish lead-colour; the hairs are of the same colour, towards the ends of a light grey and tipped with black; the lower part of the body is hoary: the sides and ends of the fur are yellowish. The length of the animal is about six inches: weight from  $3\frac{1}{4}$  to  $4\frac{1}{2}$  oz. but in winter scarcely  $2\frac{1}{2}$ . This species inhabits the south-east parts of Russia, and about all the ridge of hills spreading southward from the Uralian chain; also about the Irtysh, and in the west part of the Altaic chain; but no where in the east beyond the Oby. They delight in the most funny valleys and herby hills, especially near the edges of woods, to which they run on any alarm. They live in so concealed a manner as very rarely to be seen: but are often taken in winter in the snares laid for the ermines; so are well known to the hunters. About the Volga they are called *semłani Saetsjik*, or *ground hare*: the Tartars, from their voice, style them *tschoisshot* or *itsitskan*, or the *barking mouse*: the Kalmaucs call them *russa*. They choose for their habitations a dry spot, amidst bushes covered with a firm sod, preferring the western sides of the hills. In these they burrow, leaving a very small hole for the entrance; and forming long galleries, in which they make their nests. Those of the old ones and females are numerous and intricate: so that their place would be scarcely known but for their excrements; and even those they drop, by a wise instinct, under some bush, lest their dwelling should be discovered by their enemies among the animal creation. Their voice alone betrays their abode; it is like the piping of a quail, but deeper, and so loud as to be heard at the distance of half a German mile. It is repeated by just intervals, thrice, four times, and often six. The voice is emitted at night and morning; in the day, except in rainy and cloudy weather. It is common to both sexes; but the female is silent for some time after parturition, which is about the beginning of May N. S. She brings forth six at a

time, blind and naked; which she suckles often, and covers carefully with the materials of her nest. These most harmless and inoffensive animals never go from their holes. They feed and make their little excursions by night: they are easily made tame; and will scarcely bite when handled. The males in confinement are observed to attack one another, and express their anger by a grunting noise.

There are three or four other species of *Lepus*. Several are figured on Plate CCLXIX.

LEPUS, the hare, in astronomy, a constellation of the southern hemisphere; whose stars in Ptolemy's catalogue are 12; in that of Tycho's 13; and in the Britannic 19.

LERCHEA, in botany; a genus of the pentandria order, belonging to the monodelphia class of plants. The calyx is five-toothed; the corolla funnel-shaped and quinquelid; there are five antheræ sitting on the tube of the germ; there is one style; the capsule trilocular and polyspermous.

LERI (John de), a Protestant minister of the province of Burgundy. He was studying at Geneva when it was reported there that Villegagnon desired they would send him some pastors into Brazil. He made that voyage with two ministers, whom the church of Geneva sent thither in 1556; and wrote an account of that voyage, which has been much commended by Thuanus and others.

LERIA, or LEIRIA, a strong town of Eilremadura in Portugal, with a castle and bishop's see. It contains about 3500 inhabitants, and was formerly the residence of the kings of Portugal. W. Long. 7. 50. N. Lat. 39. 40.

LERIDA, an ancient, strong, and large town of Spain, in Catalonia, with a bishop's see, an university, and a strong castle. This place declared for king Charles after the reduction of Barcelona in 1705: but it was retaken by the duke of Orleans in 1707, after the battle of Almanza. It is seated on a hill near the river Segra, and in a fertile soil, in E. Long. 0. 35. N. Lat. 41. 31.

LERINA, or PLANASIA, (anc. geog.), one of the two small islands over against Antipolis, called also *Lerinus* and *Lirinus*. Now St Honorat, on the coast of Provence, scarce two leagues to the south of Antibes.

LERINS, the name of two islands in the Mediterranean sea, lying on the coast of Provence in France, five miles from Antibes; that near the coast, called *St Margaret*, is guarded by invalids, state-prisoners being sent here. It was taken by the English in 1746, but marshal Belleisle retook it in 1747. The other is called *St Honorat*; and is less than the former, but has a Benedictine abbey.

LERMA, a town of Spain, in Old Castile, seated on the river Arlanza, with the title of a *duchy*. W. Lon. 3. 5. N. Lat. 42. 2.

LERNA, (anc. geog.), not far from Argos, on the confines of Laconica; supposed to be a town of Laconica, but on the borders of Argolis; the position which Pausanias allots to it, near Temenium, on the sea; without adding whether it is town, river, or lake. According to Strabo, it is a lake, situated between the territories of Argos and Mycene, in contradiction to Pausanias. If there was a town of this name, it

Lepus  
||  
Lernia.

Lerica  
Lerwick.Lerwick,  
Lesbos.

seems to have flowed towards the sea, but the lake to have been more inland. Mela calls it a well-known town on the Sinus Argolicus; and Statius by *Lerna* seems to mean something more than a lake. This, however, is the lake in which, as Strabo says, was the fabled Hydra of Hercules: therefore called *Lerna Anguifera* (Statius). The lake runs in a river or stream to the sea, and perhaps arises from a river, (Virgil.) From the lake the proverb, *Lerna Malorum*, took its rise; because, according to Strabo, religious purgations were performed in it; or, according to Helysius, because the Argives threw all their filth into it.

**LERNEA**, in zoology; a genus of insects of the order of *Vermes mollusca*, the characters of which are: The body fixes itself by its tentacula, is oblong, and rather tapering; there are two ovaries like tails, and the tentacula are shaped like arms. (See three specimens figured on Plate CCLXXIV.)—1. The cyprinacea has four tentacula, two of which are lunulated at the top. It is a small species; about half an inch long, and of the thickness of a small straw. the body is rounded, of a pale greyish white, glossy on the surface, and somewhat pellucid: it is thrust out of a kind of coat or sheath, as it were at the base, which is of a white colour and a thick skin: towards the other extremity of the body, there are three obtuse tubercles, one of which is much larger than the rest: the mouth is situated in the anterior part, and near it there are two soft and fleshy processes; and near these there is also on each side another soft process, which is lunated at the extremity. It is found on the sides of the bream, carp, and roach, in many of our ponds and rivers, in great abundance. 2. The salmonacea, or salmon-louse, has an ovated body, cordated thorax, and two linear arms approaching nearly to each other. 3. The stellina, has a lunated body and cordated thorax; and inhabits the gills of the cod-fish and ling of the northern ocean.

**LERNICA**, formerly a large city in the island of Cyprus, as appears from its ruins; but is now no more than a large village, seated on the southern coast of that island, where there is a good road, and a small fort for its defence.

**LE RO** (anc. geog.); one of the two small islands in the Mediterranean, opposite to Antipolis, and half a mile distant from it to the south. Now *St Margarita*, over against Antibes, on the coast of Provence.

**LE RO**, or *Leros*, an island of the Archipelago, and one of the Sporades; remarkable, according to some authors, for the birth of Patroclus. E. Long. 26. 15. N. Lat. 37. 0.

**LE ROY LE VEUT**, the king's assent to public bills. See the articles **BILL**, **STATUTE**, and **PARLIAMENT**.

**LERWICK**, the capital town of Shetland, situated in the island called the *Mainland*, in W. Long. 1. 30. N. Lat. 61. 20. It contains about 300 families, with abundance of good houses, and as fashionable people as are to be seen in any town in Scotland of its bulk. At the north end of the town there is a regular fort, which was built at the charge of the government in the reign of King Charles II.; who, in the time of his first war with the Dutch, sent over a garrison consisting of 300 men under the command of one colonel William Sinclair a

native of Zetland, and one Mr Milne architect, for building the said fort, with 20 or 30 cannons to plant upon it for protection of the country. There was a house built within the fort sufficient to lodge 100 men. The garrison staid here three years; the charge of which, with the budding the fort, is said to have cost the king 28,000 pounds sterling. When the garrison removed, they carried off the cannon from the fort; and in the next war with the Dutch, two or three years after the garrison removed, a Dutch frigate came into Blasay Sound, and burnt the house in the fort and several others the best in the town.

Lerwick has no freedoms nor privileges, but is governed by a baillie upon the same footing with the other baillies in the county. There is a church in it, and one minister, of the Presbyterian establishment. He has for stipend 500 marks paid him out of the bishop's rents of Orkney, 300 marks by the town of Lerwick, and the tythes of Gulbarwick about 200 marks; making in all 1000 marks Scots yearly, with a free house and garden. Lerwick chiefly subsists by the resort of foreigners to it; so when that fails it must decline, as indeed it has done for several years past, having been very little frequented by foreigners, and thereby is become very poor. Several projects have been talked of, and written upon, which might have been very beneficial to Lerwick and Zetland had they taken place; as that of the British merchants carrying goods from Muscovy and Sweden, designed for the plantations in America, that must be entered in Britain, having them entered at Lerwick, which would save a great deal of time and charges to these merchants; also the Greenland and Herring Fishery companies of Britain proposed Lerwick as a most commodious port for lodging their stores in, and for re-packing their herrings, melting their oil, and thence exporting the same to foreign markets. The grand objection to these settlements is, that Lerwick is an open unfortified place; and in case of a war, the merchants ships and goods would be exposed to the enemy: for removing of which difficulty, it has been observed, that would government bestow a small garrison upon it of only 100 men and about 20 pieces of cannon, and be at a small charge in repairing the old fort, and erecting a small battery or two more, these measures might be sufficient to secure the place against any ordinary effort the enemy might make against it; and Lerwick being thus fortified, all British ships coming from the East or West Indies, could come safely there in time of war, and lie secure until carried thence by convoy, or otherwise as the proprietors should direct; and thus Lerwick might become more advantageous to the trade of Great Britain than Gibraltar or Port Mahon, and that for one-tenth part of the charge of either of those places.

**LESBOS**, a large island in the Ægean sea, on the coast of Æolia, of about 168 miles in circumference. It has been severally called *Pelagisa*, from the Pelatgi by whom it was first peopled; *Macaria*, from Macareus who settled in it; and *Lesbos*, from the son-in-law and successor of Macareus who bore the same name. The chief towns of Lesbos were Methymna and Mytilene. It was originally governed by kings, but they were afterwards subjected to the neighbouring powers. The wine which it produced was greatly esteemed by the ancients, and still is in the same repute among the

Gifford's  
Description of  
Zetland,  
p. 7-

Lefcaille  
||  
Lefzuis.

moderns. The Lesbians were so debauched and dillipated, that the epithet of *Lesbian* was often used to signify debauchery and extravagance. Lesbos has given birth to many illustrious persons, such as Arion, Terpander, Sappho, &c. See MITYLENE.

LESCAILLE (James), a celebrated Dutch poet and printer, was born at Geneva. He and his daughter Catharine Lefcaille have excelled all the Dutch poets. That lady, who was fannamed the *Sappho of Holland*, and the *tenth Muse*, died in 1711. A collection of her poems has been printed, in which are the Tragedies of Genferic, Wenceslaus, Herod and Mariamne, Hercules and Dejanira, Nicomedes, Ariadne, Calpandra, &c. James Lefcaille her father deserved the poet's crown, with which the emperor Leopold honoured him in the year 1603: he died about the year 1677, aged 67.

LESCAR, a town of Gascony, in France, and in the territory of Beam, with a bishop's see; seated on a hill, in W. Long. o. 30. N. Lat. 43. 23.

LESGUIS, a people of Asia, whose country is indifferently called by the Georgians *Lefgistan* and *Daghestan*. It is bounded to the south and east by Persia and the Caspian, to the south west and west by Georgia, the Oisi, and Kiti, and to the north by the Kisti and Tartar tribes. It is divided into a variety of districts, generally independent, and governed by chiefs elected by the people. Guldenstaedt has remarked, in the Lefguis language, eight different dialects, and has classed their tribes in conformity to this observation.

The first dialect comprehends 15 tribes, which are as follow: 1. Avar, in Georgian *Chunfagh*. The chief of this district, commonly called *Avar-Khan*, is the most powerful prince of Lefguitan, and resides at Kabuda, on the river Kasernk. The village of Avar is, in the dialect of Andi, called *Herbul*. 2. Kasernk, in the high mountains, extending along a branch of the Koifu, called *Karak*. This district is dependant on the Khan of the Kisi Kumychs. 3. Uatle, on the Koifu, joining on the Andi; subject to the Avar Khan. 4. Mokratle, situated on the Karak, and subject to the Avar Khan. 5. Onfekul, subject to the same, and situated on the Koifu. 6. Kirakhle, upon the Karak, below Kasernk, subject to the same. 7. Ghumbet, on the river Ghumbet, that joins the Koifu, subject to the chief of the Coumyks. 8. Arakan; and, 9. Burtuma, on the Koifu. 10. Antfugh, on the Samura, subject to Georgia. 11. Tebel, on the same river, independent. 12. Tamurgi, or Tumural, on the same river. 13. Akhti; and, 14. Rutal, on the same. 15. Dshar, in a valley that runs from the Alazan to the Samura. It was formerly subject to Georgia, but is now independent. In this district are seen remains of the old wall that begins at Derbent, and probably terminates at the Alazan.—The inhabitants of Derbent believe that their town was built by Alexander, and that this wall formerly extended as far as the Black Sea. It is, however, probable, from many inscriptions in old Turkish, Persian, Arabic, and Russian characters, that the wall, and the aqueducts with their various subterraneous passages, many of which are now filled up, are of high antiquity. This town suffered greatly during its siege by Sultan Amurath, who entirely destroyed the lower

quarter, then inhabited by Greeks. It was again taken by Schach Abbas. Gaerber). This town is the old Pyre Catpae.

The second dialect is spoken in the two following districts: 1. Dido, or Didonti, about the source of the Samura. This district is rich in mines; a ridge of uninhabited mountains divides it from Caket. 2. Unfo, on the small rivulets that join the Samura. These two districts, containing together about 1000 families, were formerly subject to Georgia, but are now independent.

The third dialect is that of Kabutst, which lies on the Samura rivulets, east of Dido, and north of Caket.

The fourth dialect is that of Andi, situated on a rivulet that runs into the Koifu. Some of its villages are subject to the Avar Khan, but the greater part to the Khan of Axai. The whole consists of about 800 families.

The fifth dialect is common to four districts, namely. 1. Akutsha, on the Koifu, subject to the Ufmei, or Khan of the Caitaks, and Kara-Caitaks, containing about 1000 families. The following custom is attributed by Colonel Gaerber to the subjects of this prince: "Whenever the Ufmei has a son, he is carried round from village to village, and alternately suckled by every woman who has a child at her breast until he is weaned. This custom, by establishing a kind of brotherhood between the prince and his subjects, singularly endears them to each other." 2. Balkar. 3. Zudakara, or Zudakh, down the Koifu, subject to the Ufmei. 4. Kubesha, near the Koifu. Colonel Gaerber, who wrote an account of these countries in 1728, gives the following description of this very curious place: "Kubesha is a large strong town, situated on a hill between high mountains. Its inhabitants call themselves Franki (Franks, a name common in the east to all Europeans), and relate, that their ancestors were brought hither by some accident, the particulars of which are now forgotten. The common conjecture is, that they were mariners cast away upon the coast; but those who pretend to be better versed in their history, tell the story this way:—The Greeks and Genoets, say they, carried on, during several centuries, a considerable trade, not only on the Black sea, but likewise on the Caspian, and were certainly acquainted with the mines contained in these mountains, from which they drew by their trade with the inhabitants great quantities of silver, copper, and other metals. In order to work these upon the spot, they sent hither a number of workmen to establish manufactures, and instruct the inhabitants. The subsequent invasions of the Arabs, Turks, and Monguls, during which the mines were filled up, and the manufactures abandoned, prevented the strangers from effecting their return, so that they continued here, and erected themselves into a republic. What renders this account the more probable is, that they are still excellent artists, and make very good fire-arms, as well rifled as plain; sabres, coats of mail, and several articles in gold and silver, for exportation. They have likewise, for their own defence, small copper cannons, of three pounds calibre, cast by themselves. They coin Turkish and Persian silver money, and even rubles, which readily pass current, because they are of the full weight and value.

Lefzuis.

Lefguis,  
Lelkard.

value. In their valleys they have pasture and arable lands, as well as gardens; but they purchase the greater part of their corn, trusting chiefly for support to the sale of their manufactures, which are much admired in Persia, Turkey, and the Crimea. They are generally in good circumstances, are a quiet, inoffensive people, but high spirited, and independent. Their town is considered as a neutral spot, where the neighbouring princes can deposit their treasures with safety. They elect yearly twelve magistrates, to whom they pay the most unlimited obedience; and as all the inhabitants are on a footing of perfect equality, each individual is sure to have in his turn a share in the government. In the year 1725, their magistrates, as well as the Ufmei, acknowledged the sovereignty of Russia, but without paying any tribute." 5. Zudakara, or Zadakh, down the Koifu, subject to the Ufmei. It contains about 2000 families.

The sixth dialect belongs to the districts on the eastern slope of Caucasus, between Tarku and Derbent, which are, 1. Caitak; and 2, Tabasseran, or Kara Caitak, both subject to the Ufmei.

The seventh dialect is that of Kasi-Coumyk, on a branch of the Konisa, near Zudakara. This tribe has a khan, whose authority is recognised by some neighbouring districts.

The eighth dialect is that of Kuracle, belonging to the khan of Cuba.

Besides these, there are some other Lefguis tribes, whose dialects Mr Guldenstaedt was unable to procure. From a comparison of those which he has obtained, it appears that the language of the Lefguis has no kind of affinity with any other known language, excepting only the Samoyede, to which it has a remote resemblance.

This people is probably descended from the tribes of mountaineers, known to ancient geographers under the name of *Lefge*, or *Ligyres*. The strength of their country, which is a region of mountains, whose passes are known only to themselves, has probably at all times secured them from foreign invasion; but as the same cause must have divided them into a number of tribes, independent of each other, and perhaps always distinguished by different dialects, it is not easy to imagine any common cause of union which can ever have assembled the whole nation, and have led them to undertake very remote conquests. Their history, therefore, were it known, would probably be very uninteresting to us. They subsist by raising cattle, and by predatory expeditions into the countries of their more wealthy neighbours. During the troubles in Persia, towards the beginning of this century, they repeatedly sacked the towns of Shamachie and Ardebil, and ravaged the neighbouring districts; and the present wretched state of Georgia and of part of Armenia, is owing to the frequency of their incursions. In their persons and dress, and in their general habits of life, as far as these are known to us, they greatly resemble the Circassian.

LESKARD, a town in Cornwall, seated in a level, is a corporation, and sends two members to parliament. It had formerly a castle, now in ruins. It is one of the largest and best built towns in Cornwall, with the greatest market. It was first incorporated by Edward earl of Cornwall, afterwards by King John's

son, Richard king of the Romans, and had privileges from Edward the Black Prince. Queen Elizabeth granted it a charter; by which it was to have a mayor and burgeses, who should have a perpetual succession, purchase lands, &c. Here is a handsome town-hall built on stone pillars, with a turret on it, and a noble clock with four dials that cost near 200 l. Here are a large church, a meeting-house, an eminent free-school, and a curious conduit; and on the adjacent commons, which feed multitudes of sheep, there have been frequent horse races. It has a market on Saturday, and seven fairs in the year. The list of its parliament men begins the 23d of Edward I. Here is a very great trade in all manufactures of leather; and some spinning is set up here lately, encouraged by the clothiers of Devonshire. On the hills of north Lelkard, and in the way from hence to Launceston, are many mines of tin, which is cast at the blowing houses into blocks, that are sent hither to be coined.

LESLIE (John), bishop of Ross in Scotland, the son of Gavin Leslie an eminent lawyer, was born in the year 1526, and educated at the university of Aberdeen; of which diocese he was made official, when but a youth. He was soon after created doctor of civil and canon law; but being peculiarly addicted to the study of divinity, he took orders, and became parson of Une. When the reformation began to spread in Scotland, and disputes about religion ran high, Dr Leslie, in 1560, distinguished himself at Edinburgh as a principal advocate for the Romish church, and was afterwards deputed by the chief nobility of that religion to condole with queen Mary on the death of her husband the king of France, and to invite her to return to her native dominions. Accordingly, after a short residence with her majesty, they embarked together at Calais in 1561, and landed at Leith. She immediately made him one of her privy-council, and a senator of the college of justice. In 1564, he was made abbot of Lundore; and on the death of Sinclair was promoted to the bishopric of Ross. These accumulated honours he wished not to enjoy in luxurious indolence. The influence derived from them, he exerted to the prosperity of his country. It is to him that Scotland is indebted for the publication of its laws, commonly called "The *black* acts of parliament," from the Saxon character in which they were printed. At his most earnest desire, the revision and collection of them were committed to the great officers of the crown. In 1568, queen Mary having fled to England for refuge, and being there detained a prisoner, queen Elizabeth appointed certain commissioners at York to examine into the cause of the dispute between Mary and her subjects. These commissioners were met by others from the queen of Scots. The bishop of Ross was of the number, and pleaded the cause of his royal mistress with great energy, though without success; Elizabeth had no intention to release her. Mary, disappointed in her expectations from the conference at York, sent the bishop of Ross ambassador to Elizabeth, who paid little attention to his complaints. He then began to negotiate a marriage between his royal mistress and the duke of Norfolk; which negotiation, it is well known, proved fatal to the duke, and was the cause of Leslie's being sent to the Tower. In 1573 he was banished the kingdom, and retired to Holland.

Leslie.

Holland. The two following years he spent in fruitless endeavours to engage the powers of Europe to espouse the cause of his queen. His last application was to the pope; but the power of the heretic Elizabeth had no less weight with his holiness than with the other Roman Catholic princes of Europe. Finding all his personal applications ineffectual, he had recourse to his pen in Queen Mary's vindication; but Elizabeth's *ultima ratio regum* was too potent for all his arguments. Bishop Leslie, during his exile, was made coadjutor to the archbishop of Rouen. He was at Brussels when he received the account of Queen Mary's execution; and immediately retired to the convent of Guirterberg near that city, where he died in the year 1596. It was during the long and unfortunate captivity of Mary, that he amused himself in writing the History of Scotland, and his other works. The elegance and charms of literary occupations served to assuage the violence of his woes. His knowledge and judgment as an historian are equally to be commended. Where he acts as the transcriber of Boece, there may be distinguished, indeed, some of the inaccuracies of that writer. But, when he speaks in his own person, he has a manliness, a candour, and a moderation, which appear not always even in authors of the Protestant persuasion. His works are, 1. *Afflicti animi consolationes*, &c. composed for the consolation of the captive queen. 2. *De origine, moribus, et gestis Scotorum*. 3. *De titulo et jure serenissime Mariæ Scotorum reginæ, quo regni Angliæ successionem sibi jure vindicat*. 4. *Parænesis ad Anglos et Scotos*. 5. *De illust. faminarum in republ. administranda*, &c. 6. *Oratio ad reginam Elizabetham pro libertate impetranda*. 7. *Parænesis ad nobilitatem populuniquè Scoticum*. 8. An account of his proceedings during his embassy in England from 1568 to 1572; manuscript, Oxon. 9. Apology for the bishop of Ross, concerning the duke of Norfolk; manuscript, Oxon. 10. Several letters, manuscript.

LESLIE (Charles), an Irish divine, and a zealous Protestant: but being attached to the house of Stuart, he left Ireland, and went to the pretender at Bar le Duc, and resided with him till near the time of his death; constantly endeavouring to make him a Protestant, but without effect. He died in 1722. His principal works are, 1. A short and easy method with the Deists. 2. A short and easy method with the Jews. 3. The snake in the grass. 4. Hereditary right to the Crown of England asserted. 5. The Socinian controversy discussed. 6. The charge of Socinianism against Dr Tillotson considered; and many others.

All his theological pieces, except that against Archbishop Tillotson, were collected and published by himself, in 2 vols folio.

LESSINES, a town of the Austrian Netherlands, in Hainault, seated on the river Dender, and famous for its linen manufacture. W. Long. 3. 53. N. Lat. 51. 41.

LESSONS, among ecclesiastical writers, portions of the Holy Scripture, read in Christian churches, at the time of divine service.

In the ancient church, reading the Scriptures was one part of the service of the catechumens; at which all persons were allowed to be present, in order to obtain instruction.

The church of England, in the choice of lessons, proceeds as follows: for the first lesson on ordinary days, she directs, to begin at the beginning of the year with Genesis, and so continue on, till the books of the Old Testament are read over; only omitting the Chronicles, which are for the most part the same with the books of Samuel and Kings, and other particular chapters in other books, either because they contain names of persons, places, or other matters less profitable to ordinary readers.

The course of the first lessons for Sundays is regulated after a different manner. From Advent to Septuagesima-Sunday, some particular chapters of Isaiah are appointed to be read, because that book contains the clearest prophecies concerning Christ. Upon Septuagesima Sunday Genesis is begun, because that book which treats of the fall of man, and the severe judgement of God inflicted on the world for sin, best suits with a time of repentance and mortification. After Genesis, follow chapters out of the books of the Old Testament, as they lie in order; only on festival Sundays, such as Easter, Whitunday, &c. the particular history relating to that day is appointed to be read; and on the saints-days, the church appoints lessons out of the moral books, such as Proverbs, Ecclesiastes, Ecclesiasticus, &c. as containing excellent instructions for the conduct of life.

As to the second lessons, the church observes the same course both on Sundays and week-days: reading the gospels and Acts of the Apostles in the morning, and the epistles in the evening, in the order they stand in the New Testament: excepting on saints days and holy days, when such lessons are appointed as either explain the mystery, relate the history, or apply the example to us.

E R R A T A.

VOL. VII. p. 99. col. 1. l. 11. from bottom. For 1760, read 1770.
